## Sequelae of infectious and parasitic diseases (B90-B94)

**NOTES** Categories B90-B94 are to be used to indicate conditions in categories A00-B89 as the cause of sequelae, which are themselves classified elsewhere. The 'sequelae' include conditions specified as such; they also include residuals of diseases classifiable to the above categories if there is evidence that the disease itself is no longer present. Codes from these categories are not to be used for chronic infections. Code chronic current infections to active infectious disease as appropriate.

# Chapter 2: Neoplasms (C00-D49)

## Chapter-Specific Coding Guidelines

**I.C.2. Chapter 2: Neoplasms (C00-D49)**

**General Guidelines**

Chapter 2 of the ICD-10-CM contains the codes for most benign and all malignant neoplasms. Certain benign neoplasms, such as prostatic adenomas, may be found in the specific body system chapters. To properly code a neoplasm, it is necessary to determine from the record if the neoplasm is benign, in-situ, malignant, or of uncertain histologic behavior. If malignant, any secondary (metastatic) sites should also be determined.

Primary malignant neoplasms overlapping site boundaries

A primary malignant neoplasm that overlaps two or more contiguous (next to each other) sites should be classified to the subcategory/code .8 ('overlapping lesion'), unless the combination is specifically indexed elsewhere. For multiple neoplasms of the same site that are not contiguous such as tumors in different quadrants of the same breast, codes for each site should be assigned.

Malignant neoplasm of ectopic tissue

Malignant neoplasms of ectopic tissue are to be coded to the site of origin mentioned, e.g., ectopic pancreatic malignant neoplasms involving the stomach are coded to malignant neoplasm of pancreas, unspecified (C25.9).

The neoplasm table in the Alphabetic Index should be referenced first. However, if the histological term is documented, that term should be referenced first, rather than going immediately to the Neoplasm Table, in order to determine which column in the Neoplasm Table is appropriate. For example, if the documentation indicates "adenoma," refer to the term in the Alphabetic Index to review the entries under this term and the instructional note to "see also neoplasm, by site, benign." The table provides the proper code based on the type of neoplasm and the site. It is important to select the proper column in the table that corresponds to the type of neoplasm. The Tabular List should then be referenced to verify that the correct code has been selected from the table and that a more specific site code does not exist.

*See Section I.C.21. Factors influencing health status and contact with health services, Status, for information regarding Z15.0, codes for genetic susceptibility to cancer.*

**a. Admission/Encounter for treatment of primary site**

If the malignancy is chiefly responsible for occasioning the patient admission/encounter and treatment is directed at the primary site, designate the primary malignancy as the principal/first-listed diagnosis.

The only exception to this guideline is if the administration of chemotherapy, immunotherapy or external beam radiation therapy is chiefly responsible for occasioning the admission/encounter. In that case, assign the appropriate Z51.-- code as the first-listed or principal diagnosis, and the underlying diagnosis or problem for which the service is being performed as a secondary diagnosis.

**b. Admission/Encounter for treatment of secondary site**

When a patient is admitted because of a primary neoplasm with metastasis and treatment is directed toward the secondary site only, the secondary neoplasm is designated as the principal diagnosis even though the primary malignancy is still present.

**c. Coding and sequencing of complications**

Coding and sequencing of complications associated with the malignancies or with the therapy thereof are subject to the following guidelines:

**1) Anemia associated with malignancy**

When admission/encounter is for management of an anemia associated with the malignancy, and the treatment is only for anemia, the appropriate code for the malignancy is sequenced as the principal or first-listed diagnosis followed by the appropriate code for the anemia (such as code D63.0, Anemia in neoplastic disease).

2) **Anemia associated with chemotherapy, immunotherapy and radiation therapy**
When the admission/encounter is for management of an anemia associated with an adverse effect of the administration of chemotherapy or immunotherapy and the only treatment is for the anemia, the anemia code is sequenced first followed by the appropriate codes for the neoplasm and the adverse effect (T45.1X5-, Adverse effect of antineoplastic and immunosuppressive drugs).
When the admission/encounter is for management of an anemia associated with an adverse effect of radiotherapy, the anemia code should be sequenced first, followed by the appropriate neoplasm code and code Y84.2, Radiological procedure and radiotherapy as the cause of abnormal reaction of the patient, or of later complication, without mention of misadventure at the time of the procedure.

3) **Management of dehydration due to the malignancy**
When the admission/encounter is for management of dehydration due to the malignancy and only the dehydration is being treated (intravenous rehydration), the dehydration is sequenced first, followed by the code(s) for the malignancy.

4) **Treatment of a complication resulting from a surgical procedure**
When the admission/encounter is for treatment of a complication resulting from a surgical procedure, designate the complication as the principal or first-listed diagnosis if treatment is directed at resolving the complication.

**d. Primary malignancy previously excised**
When a primary malignancy has been previously excised or eradicated from its site and there is no further treatment directed to that site and there is no evidence of any existing primary malignancy at that site, a code from category Z85, Personal history of malignant neoplasm, should be used to indicate the former site of the malignancy. Any mention of extension, invasion, or metastasis to another site is coded as a secondary malignant neoplasm to that site. The secondary site may be the principal or first-listed diagnosis with the Z85 code used as a secondary code.
*See section I.C.2.t. Secondary malignant neoplasm of lymphoid tissue.*

**e. Admissions/Encounters involving *antineoplastic* chemotherapy, immunotherapy and radiation therapy**

1) **Episode of care involves surgical removal of neoplasm**
When an episode of care involves the surgical removal of a neoplasm, primary or secondary site, followed by adjunct chemotherapy or radiation treatment during the same episode of care, the code for the neoplasm should be assigned as principal or first-listed diagnosis.

2) **Patient admission/encounter chiefly for administration of *antineoplastic* chemotherapy, immunotherapy and radiation therapy**
If a patient admission/encounter is chiefly for the administration of chemotherapy, immunotherapy or external beam radiation therapy **for the treatment of a neoplasm,** assign code Z51.0, Encounter for antineoplastic radiation therapy, or Z51.11, Encounter for antineoplastic chemotherapy, or Z51.12, Encounter for antineoplastic immunotherapy as the first-listed or principal diagnosis. **If the reason for the encounter is more than one type of antineoplastic therapy, code Z51.0 and codes from subcategory Z51.1 may be assigned together, in which case one of these codes would be reported as a secondary diagnosis.**
The malignancy for which the therapy is being administered should be assigned as a secondary diagnosis.
If a patient admission/encounter is for the insertion or implantation of radioactive elements (e.g., brachytherapy) the appropriate code for the malignancy is sequenced as the principal or first-listed diagnosis. Code Z51.0 should not be assigned.

3) **Patient admitted for radiation therapy, chemotherapy or immunotherapy and develops complications**
When a patient is admitted for the purpose of external beam radiotherapy, immunotherapy or chemotherapy and develops complications such as uncontrolled nausea and vomiting or dehydration, the principal or first-listed diagnosis is Z51.0, Encounter for antineoplastic radiation therapy, or Z51.11, Encounter for antineoplastic chemotherapy, or Z51.12, Encounter for antineoplastic immunotherapy followed by any codes for the complications.
When a patient is admitted for the purpose of insertion or implantation of radioactive elements (e.g., brachytherapy) and develops complications such as uncontrolled nausea and vomiting or dehydration, the principal or first-listed diagnosis is the appropriate code for the malignancy followed by any codes for the complications.

**f. Admission/encounter to determine extent of malignancy**
When the reason for admission/encounter is to determine the extent of the malignancy, or for a procedure such as paracentesis or thoracentesis, the primary malignancy or appropriate metastatic site is designated as the principal or first-listed diagnosis, even though chemotherapy or radiotherapy is administered.

**g. Symptoms, signs, and abnormal findings listed in Chapter 18 associated with neoplasms**

Symptoms, signs, and ill-defined conditions listed in Chapter 18 characteristic of, or associated with, an existing primary or secondary site malignancy cannot be used to replace the malignancy as principal or first-listed diagnosis, regardless of the number of admissions or encounters for treatment and care of the neoplasm.

*See section I.C.21. Factors influencing health status and contact with health services, Encounter for prophylactic organ removal.*

**h. Admission/encounter for pain control/management**

*See Section I.C.6. for information on coding admission/encounter for pain control/management.*

**i. Malignancy in two or more noncontiguous sites**

A patient may have more than one malignant tumor in the same organ. These tumors may represent different primaries or metastatic disease, depending on the site. Should the documentation be unclear, the provider should be queried as to the status of each tumor so that the correct codes can be assigned.

**j. Disseminated malignant neoplasm, unspecified**

Code C80.0, Disseminated malignant neoplasm, unspecified, is for use only in those cases where the patient has advanced metastatic disease and no known primary or secondary sites are specified. It should not be used in place of assigning codes for the primary site and all known secondary sites.

**k. Malignant neoplasm without specification of site**

Code C80.1, Malignant (primary) neoplasm, unspecified, equates to Cancer, unspecified. This code should only be used when no determination can be made as to the primary site of a malignancy. This code should rarely be used in the inpatient setting.

**l. Sequencing of neoplasm codes**

**1) Encounter for treatment of primary malignancy**

If the reason for the encounter is for treatment of a primary malignancy, assign the malignancy as the principal/first-listed diagnosis. The primary site is to be sequenced first, followed by any metastatic sites.

**2) Encounter for treatment of secondary malignancy**

When an encounter is for a primary malignancy with metastasis and treatment is directed toward the metastatic (secondary) site(s) only, the metastatic site(s) is designated as the principal/first-listed diagnosis. The primary malignancy is coded as an additional code.

**3) Malignant neoplasm in a pregnant patient**

When a pregnant patient has a malignant neoplasm, a code from subcategory O9A.1-, Malignant neoplasm complicating pregnancy, childbirth, and the puerperium, should be sequenced first, followed by the appropriate code from Chapter 2 to indicate the type of neoplasm.

**4) Encounter for complication associated with a neoplasm**

When an encounter is for management of a complication associated with a neoplasm, such as dehydration, and the treatment is only for the complication, the complication is coded first, followed by the appropriate code(s) for the neoplasm.

The exception to this guideline is anemia. When the admission/encounter is for management of an anemia associated with the malignancy, and the treatment is only for anemia, the appropriate code for the malignancy is sequenced as the principal or first-listed diagnosis followed by code D63.0, Anemia in neoplastic disease.

**5) Complication from surgical procedure for treatment of a neoplasm**

When an encounter is for treatment of a complication resulting from a surgical procedure performed for the treatment of the neoplasm, designate the complication as the principal/first-listed diagnosis. See the guideline regarding the coding of a current malignancy versus personal history to determine if the code for the neoplasm should also be assigned.

**6) Pathologic fracture due to a neoplasm**

When an encounter is for a pathological fracture due to a neoplasm, and the focus of treatment is the fracture, a code from subcategory M84.5, Pathological fracture in neoplastic disease, should be sequenced first, followed by the code for the neoplasm.

If the focus of treatment is the neoplasm with an associated pathological fracture, the neoplasm code should be sequenced first, followed by a code from M84.5 for the pathological fracture.

**m. Current malignancy versus personal history of malignancy**

When a primary malignancy has been excised but further treatment, such as an additional surgery for the malignancy, radiation therapy or chemotherapy is directed to that site, the primary malignancy code should be used until treatment is completed.

When a primary malignancy has been previously excised or eradicated from its site, there is no further treatment (of the malignancy) directed to that site, and there is no evidence of any existing primary malignancy at that site, a code from category Z85, Personal history of malignant neoplasm, should be used to indicate the former site of the malignancy.

Codes from subcategories Z85.0 – Z85.85 should only be assigned for the former site of a primary malignancy, not the site of a secondary malignancy. Code Z85.89 may be assigned for the former site(s) of either a primary or secondary malignancy.

*See Section I.C.21. Factors influencing health status and contact with health services, History (of).*

**n. Leukemia, Multiple Myeloma, and Malignant Plasma Cell Neoplasms in remission versus personal history**

The categories for leukemia, and category C90, Multiple myeloma and malignant plasma cell neoplasms, have codes indicating whether or not the leukemia has achieved remission. There are also codes Z85.6, Personal history of leukemia, and Z85.79, Personal history of other malignant neoplasms of lymphoid, hematopoietic and related tissues. If the documentation is unclear as to whether the leukemia has achieved remission, the provider should be queried.

*See Section I.C.21. Factors influencing health status and contact with health services, History (of).*

**o. Aftercare following surgery for neoplasm**

*See Section I.C.21. Factors influencing health status and contact with health services, Aftercare.*

**p. Follow-up care for completed treatment of a malignancy**

*See Section I.C.21. Factors influencing health status and contact with health services, Follow-up.*

**q. Prophylactic organ removal for prevention of malignancy**

*See Section I.C. 21, Factors influencing health status and contact with health services, Prophylactic organ removal.*

**r. Malignant neoplasm associated with transplanted organ**

A malignant neoplasm of a transplanted organ should be coded as a transplant complication. Assign first the appropriate code from category T86.-, Complications of transplanted organs and tissue, followed by code C80.2, Malignant neoplasm associated with transplanted organ. Use an additional code for the specific malignancy.

**s. Breast Implant Associated Anaplastic Large Cell Lymphoma**

Breast implant associated anaplastic large cell lymphoma (BIA-ALCL) is a type of lymphoma that can develop around breast implants. Assign code C84.7A, Anaplastic large cell lymphoma, ALK-negative, breast, for BIA-ALCL or C84.7B, Anaplastic large cell lymphoma, ALK-negative, in remission, for BIA-ALCL in remission. Do not assign a complication code from chapter 19.

**t. Secondary malignant neoplasm of lymphoid tissue**

When a malignant neoplasm of lymphoid tissue metastasizes beyond the lymph nodes, a code from categories C81-C85 with a final character "9" identifying "extranodal and solid organ sites" **should be assigned** rather than a code for the secondary neoplasm of the affected solid organ. For example, for metastasis of diffuse large B-cell lymphoma to the lung, brain and left adrenal gland, assign code C83.39**8**, Diffuse large B-cell lymphoma **of other** extranodal and solid organ sites.

## Neoplasms (C00-D49)

**This chapter contains the following blocks:**

| | |
|---|---|
| **C00-C14** | Malignant neoplasms of lip, oral cavity and pharynx |
| **C15-C26** | Malignant neoplasms of digestive organs |
| **C30-C39** | Malignant neoplasms of respiratory and intrathoracic organs |
| **C40-C41** | Malignant neoplasms of bone and articular cartilage |
| **C43-C44** | Melanoma and other malignant neoplasms of skin |
| **C45-C49** | Malignant neoplasms of mesothelial and soft tissue |
| **C50** | Malignant neoplasms of breast |
| **C51-C58** | Malignant neoplasms of female genital organs |
| **C60-C63** | Malignant neoplasms of male genital organs |
| **C64-C68** | Malignant neoplasms of urinary tract |
| **C69-C72** | Malignant neoplasms of eye, brain and other parts of central nervous system |
| **C73-C75** | Malignant neoplasms of thyroid and other endocrine glands |
| **C7A** | Malignant neuroendocrine tumors |
| **C7B** | Secondary neuroendocrine tumors |
| **C76-C80** | Malignant neoplasms of ill-defined, other secondary and unspecified sites |
| **C81-C96** | Malignant neoplasms of lymphoid, hematopoietic and related tissue |
| **D00-D09** | In situ neoplasms |
| **D10-D36** | Benign neoplasms, except benign neuroendocrine tumors |
| **D3A** | Benign neuroendocrine tumors |
| **D37-D48** | Neoplasms of uncertain behavior, polycythemia vera and myelodysplastic syndromes |
| **D49** | Neoplasms of unspecified behavior |

**NOTES** Functional activity

All neoplasms are classified in this chapter, whether they are functionally active or not. An additional code from Chapter 4 may be used, to identify functional activity associated with any neoplasm.

Morphology [Histology]

Chapter 2 classifies neoplasms primarily by site (topography), with broad groupings for behavior, malignant, in situ, benign, etc. The Table of Neoplasms should be used to identify the correct topography code. In a few cases, such as for malignant melanoma and certain neuroendocrine tumors, the morphology (histologic type) is included in the category and codes.

Primary malignant neoplasms overlapping site boundaries

A primary malignant neoplasm that overlaps two or more contiguous (next to each other) sites should be classified to the subcategory/code .8 ('overlapping lesion'), unless the combination is specifically indexed elsewhere. For multiple neoplasms of the same site that are not contiguous, such as tumors in different quadrants of the same breast, codes for each site should be assigned.

Malignant neoplasm of ectopic tissue

Malignant neoplasms of ectopic tissue are to be coded to the site mentioned, e.g., ectopic pancreatic malignant neoplasms are coded to pancreas, unspecified (C25.9).

## Malignant neoplasms (C00-C96)

## Malignant neoplasms, stated or presumed to be primary (of specified sites), and certain specified histologies, except neuroendocrine, and of lymphoid, hematopoietic and related tissue (C00-C75)

## Malignant neoplasms of lip, oral cavity and pharynx (C00-C14)

4th C00 **Malignant neoplasm of lip**

**Use additional** code to identify:
- alcohol abuse and dependence (F10.-)
- history of tobacco dependence (Z87.891)
- tobacco dependence (F17.-)
- tobacco use (Z72.0)

EXCLUDES1 *malignant melanoma of lip (C43.0)*
*Merkel cell carcinoma of lip (C4A.0)*
*other and unspecified malignant neoplasm of skin of lip (C44.0-)*

C00.0 **Malignant neoplasm of external upper lip**
- Malignant neoplasm of lipstick area of upper lip
- Malignant neoplasm of upper lip NOS
- Malignant neoplasm of vermilion border of upper lip

C00.1 **Malignant neoplasm of external lower lip**
- Malignant neoplasm of lower lip NOS
- Malignant neoplasm of lipstick area of lower lip
- Malignant neoplasm of vermilion border of lower lip

C00.2 **Malignant neoplasm of external lip, unspecified**
- Malignant neoplasm of vermilion border of lip NOS

C00.3 **Malignant neoplasm of upper lip, inner aspect**

Malignant neoplasm of buccal aspect of upper lip
Malignant neoplasm of frenulum of upper lip
Malignant neoplasm of mucosa of upper lip
Malignant neoplasm of oral aspect of upper lip

C00.4 **Malignant neoplasm of lower lip, inner aspect**

Malignant neoplasm of buccal aspect of lower lip
Malignant neoplasm of frenulum of lower lip
Malignant neoplasm of mucosa of lower lip
Malignant neoplasm of oral aspect of lower lip

C00.5 **Malignant neoplasm of lip, unspecified, inner aspect**

Malignant neoplasm of buccal aspect of lip, unspecified
Malignant neoplasm of frenulum of lip, unspecified
Malignant neoplasm of mucosa of lip, unspecified
Malignant neoplasm of oral aspect of lip, unspecified

C00.6 **Malignant neoplasm of commissure of lip, unspecified**

C00.8 **Malignant neoplasm of overlapping sites of lip**

C00.9 **Malignant neoplasm of lip, unspecified**

C01 **Malignant neoplasm of base of tongue** HCC RxHCC

Malignant neoplasm of dorsal surface of base of tongue
Malignant neoplasm of fixed part of tongue NOS
Malignant neoplasm of posterior third of tongue

**Use additional** code to identify:
alcohol abuse and dependence (F10.-)
history of tobacco dependence (Z87.891)
tobacco dependence (F17.-)
tobacco use (Z72.0)

4th C02 **Malignant neoplasm of other and unspecified parts of tongue**

**Use additional** code to identify:
- alcohol abuse and dependence (F10.-)
- history of tobacco dependence (Z87.891)
- tobacco dependence (F17.-)
- tobacco use (Z72.0)

C02.0 **Malignant neoplasm of dorsal surface of tongue** HCC RxHCC

Malignant neoplasm of anterior two-thirds of tongue, dorsal surface

EXCLUDES *malignant neoplasm of dorsal surface of base of tongue (C01)*

C02.1 **Malignant neoplasm of border of tongue** HCC RxHCC

Malignant neoplasm of tip of tongue

C02.2 **Malignant neoplasm of ventral surface of tongue** HCC RxHCC

Malignant neoplasm of anterior two-thirds of tongue, ventral surface

Malignant neoplasm of frenulum linguae

C02.3 **Malignant neoplasm of anterior two-thirds of tongue, part unspecified** HCC RxHCC

Malignant neoplasm of middle third of tongue NOS

Malignant neoplasm of mobile part of tongue NOS

C02.4 **Malignant neoplasm of lingual tonsil** HCC RxHCC

EXCLUDES *malignant neoplasm of tonsil NOS (C09.9)*

C02.8 **Malignant neoplasm of overlapping sites of tongue** HCC RxHCC

Malignant neoplasm of two or more contiguous sites of tongue

C02.9 **Malignant neoplasm of tongue, unspecified** HCC RxHCC

4th C03 **Malignant neoplasm of gum**

INCLUDES *malignant neoplasm of alveolar (ridge) mucosa*

*malignant neoplasm of gingiva*

**Use additional** code to identify:
- alcohol abuse and dependence (F10.-)
- history of tobacco dependence (Z87.891)
- tobacco dependence (F17.-)
- tobacco use (Z72.0)

EXCLUDES *malignant odontogenic neoplasms (C41.0-C41.1)*

C03.0 **Malignant neoplasm of upper gum** HCC RxHCC

C03.1 **Malignant neoplasm of lower gum** HCC RxHCC

C03.9 **Malignant neoplasm of gum, unspecified** HCC RxHCC

4th C04 **Malignant neoplasm of floor of mouth**

**Use additional** code to identify:

alcohol abuse and dependence (F10.-)

history of tobacco dependence (Z87.891)

tobacco dependence (F17.-)

tobacco use (Z72.0)

C04.0 **Malignant neoplasm of anterior floor of mouth** HCC RxHCC

Malignant neoplasm of anterior to the premolar-canine junction

C04.1 **Malignant neoplasm of lateral floor of mouth** HCC RxHCC

C04.8 **Malignant neoplasm of overlapping sites of floor of mouth** HCC RxHCC

C04.9 **Malignant neoplasm of floor of mouth, unspecified** HCC RxHCC

4th C05 **Malignant neoplasm of palate**

**Use additional** code to identify:

alcohol abuse and dependence (F10.-)

history of tobacco dependence (Z87.891)

tobacco dependence (F17.-)

tobacco use (Z72.0)

EXCLUDES1 *Kaposi's sarcoma of palate (C46.2)*

C05.0 **Malignant neoplasm of hard palate** HCC RxHCC

C05.1 **Malignant neoplasm of soft palate** HCC RxHCC

EXCLUDES1 *malignant neoplasm of nasopharyngeal surface of soft palate (C11.3)*

C05.2 **Malignant neoplasm of uvula** HCC RxHCC

C05.8 **Malignant neoplasm of overlapping sites of palate** HCC RxHCC

C05.9 **Malignant neoplasm of palate, unspecified** HCC RxHCC

Malignant neoplasm of roof of mouth

4th C06 **Malignant neoplasm of other and unspecified parts of mouth**

**Use additional** code to identify:

alcohol abuse and dependence (F10.-)

history of tobacco dependence (Z87.891)

tobacco dependence (F17.-)

tobacco use (Z72.0)

C06.0 **Malignant neoplasm of cheek mucosa** HCC RxHCC

Malignant neoplasm of buccal mucosa NOS

Malignant neoplasm of internal cheek

C06.1 **Malignant neoplasm of vestibule of mouth** HCC RxHCC

Malignant neoplasm of buccal sulcus (upper) (lower)

Malignant neoplasm of labial sulcus (upper) (lower)

C06.2 **Malignant neoplasm of retromolar area** HCC RxHCC

5th C06.8 **Malignant neoplasm of overlapping sites of other and unspecified parts of mouth**

C06.80 **Malignant neoplasm of overlapping sites of unspecified parts of mouth** HCC RxHCC

C06.89 **Malignant neoplasm of overlapping sites of other parts of mouth** HCC RxHCC

'book leaf' neoplasm [ventral surface of tongue and floor of mouth]

C06.9 **Malignant neoplasm of mouth, unspecified** HCC RxHCC

Malignant neoplasm of minor salivary gland, unspecified site

Malignant neoplasm of oral cavity NOS

C07 **Malignant neoplasm of parotid gland** HCC RxHCC

**Use additional** code to identify:

alcohol abuse and dependence (F10.-)

exposure to environmental tobacco smoke (Z77.22)

exposure to tobacco smoke in the perinatal period (P96.81)

history of tobacco dependence (Z87.891)

occupational exposure to environmental tobacco smoke (Z57.31)

tobacco dependence (F17.-)

tobacco use (Z72.0)

4th C08 **Malignant neoplasm of other and unspecified major salivary glands**

INCLUDES *malignant neoplasm of salivary ducts*

**Use additional** code to identify:

alcohol abuse and dependence (F10.-)

exposure to environmental tobacco smoke (Z77.22)

exposure to tobacco smoke in the perinatal period (P96.81)

history of tobacco dependence (Z87.891)

occupational exposure to environmental tobacco smoke (Z57.31)

tobacco dependence (F17.-)

tobacco use (Z72.0)

EXCLUDES1 *malignant neoplasms of specified minor salivary glands which are classified according to their anatomical location*

EXCLUDES2 *malignant neoplasms of minor salivary glands NOS (C06.9)*

*malignant neoplasm of parotid gland (C07)*

C08.0 **Malignant neoplasm of submandibular gland** HCC RxHCC

Malignant neoplasm of submaxillary gland

C08.1 **Malignant neoplasm of sublingual gland** HCC RxHCC

C08.9 **Malignant neoplasm of major salivary gland, unspecified** HCC RxHCC

Malignant neoplasm of salivary gland (major) NOS

4th C09 **Malignant neoplasm of tonsil**

D48.0 Neoplasm of uncertain behavior of bone and articular cartilage CC/MCC Ex0

EXCLUDES1 *neoplasm of uncertain behavior of cartilage of ear (D48.1-)*
*neoplasm of uncertain behavior of cartilage of larynx (D38.0)*
*neoplasm of uncertain behavior of cartilage of nose (D38.5)*
*neoplasm of uncertain behavior of connective tissue of eyelid (D48.1-)*
*neoplasm of uncertain behavior of synovia (D48.1-)*

5th D48.1 Neoplasm of uncertain behavior of connective and other soft tissue

Neoplasm of uncertain behavior of connective tissue of ear
Neoplasm of uncertain behavior of connective tissue of eyelid
Stromal tumors of uncertain behavior of digestive system

EXCLUDES1 *neoplasm of uncertain behavior of articular cartilage (D48.0)*
*neoplasm of uncertain behavior of cartilage of larynx (D38.0)*
*neoplasm of uncertain behavior of cartilage of nose (D38.5)*
*neoplasm of uncertain behavior of connective tissue of breast (D48.6-)*

D48.11 **Desmoid tumor**

*Aggressive fibromatosis

D48.110 **Desmoid tumor of head and neck** CC/MCC Ex0

D48.111 **Desmoid tumor of chest wall** CC/MCC Ex0

D48.112 **Desmoid tumor, intrathoracic** CC/MCC Ex0

D48.113 **Desmoid tumor of abdominal wall** CC/MCC Ex0

D48.114 **Desmoid tumor, intraabdominal** CC/MCC Ex0

Desmoid tumor of pelvic cavity

Desmoid tumor, peritoneal, retroperitoneal

D48.115 **Desmoid tumor of upper extremity and shoulder girdle** CC/MCC Ex0

D48.116 **Desmoid tumor of lower extremity and pelvic girdle** CC/MCC Ex0

Desmoid tumor of buttock

D48.117 **Desmoid tumor of back** CC/MCC Ex0

D48.118 **Desmoid tumor of other site** CC/MCC Ex0

D48.119 **Desmoid tumor of unspecified site** CC/MCC Ex0

D48.19 **Other specified neoplasm of uncertain behavior of connective and other soft tissue** CC/MCC Ex0

D48.2 **Neoplasm of uncertain behavior of peripheral nerves and autonomic nervous system** CC/MCC Ex0

EXCLUDES1 *neoplasm of uncertain behavior of peripheral nerves of orbit (D48.7)*

D48.3 **Neoplasm of uncertain behavior of retroperitoneum** CC/MCC Ex0

D48.4 **Neoplasm of uncertain behavior of peritoneum** CC/MCC Ex0

D48.5 **Neoplasm of uncertain behavior of skin** CC/MCC Ex0

Neoplasm of uncertain behavior of anal margin

Neoplasm of uncertain behavior of anal skin

Neoplasm of uncertain behavior of perianal skin

Neoplasm of uncertain behavior of skin of breast

EXCLUDES1 *neoplasm of uncertain behavior of anus NOS (D37.8)*

*neoplasm of uncertain behavior of skin of genital organs (D39.8, D40.8)*

*neoplasm of uncertain behavior of vermilion border of lip (D37.0)*

5th D48.6 **Neoplasm of uncertain behavior of breast**

Neoplasm of uncertain behavior of connective tissue of breast

Cystosarcoma phyllodes

EXCLUDES1 *neoplasm of uncertain behavior of skin of breast (D48.5)*

D48.60 **Neoplasm of uncertain behavior of unspecified breast** CC/MCC Ex0

D48.61 **Neoplasm of uncertain behavior of right breast** CC/MCC Ex0

D48.62 **Neoplasm of uncertain behavior of left breast** CC/MCC Ex0

D48.7 **Neoplasm of uncertain behavior of other specified sites** CC/MCC Ex0

Neoplasm of uncertain behavior of eye

Neoplasm of uncertain behavior of heart

Neoplasm of uncertain behavior of peripheral nerves of orbit

EXCLUDES1 *neoplasm of uncertain behavior of connective tissue (D48.1-)*

*neoplasm of uncertain behavior of skin of eyelid (D48.5)*

D48.9 **Neoplasm of uncertain behavior, unspecified** CC/MCC Ex0

## Neoplasms of unspecified behavior (D49)

4th D49 Neoplasms of unspecified behavior

NOTES Category D49 classifies by site neoplasms of unspecified morphology and behavior. The term 'mass', unless otherwise stated, is not to be regarded as a neoplastic growth.

INCLUDES *'growth' NOS*
*neoplasm NOS*
*new growth NOS*
*tumor NOS*

EXCLUDES1 *neoplasms of uncertain behavior (D37-D44, D48)*

D49.0 Neoplasm of unspecified behavior of digestive system CC/MCC Exc

EXCLUDES1 *neoplasm of unspecified behavior of margin of anus (D49.2)*
*neoplasm of unspecified behavior of perianal skin (D49.2)*
*neoplasm of unspecified behavior of skin of anus (D49.2)*

D49.1 Neoplasm of unspecified behavior of respiratory system CC/MCC Exc

D49.2 Neoplasm of unspecified behavior of bone, soft tissue, and skin CC/MCC Exc

EXCLUDES1 *neoplasm of unspecified behavior of anal canal (D49.0)*
*neoplasm of unspecified behavior of anus NOS (D49.0)*
*neoplasm of unspecified behavior of bone marrow (D49.89)*
*neoplasm of unspecified behavior of cartilage of larynx (D49.1)*
*neoplasm of unspecified behavior of cartilage of nose (D49.1)*
*neoplasm of unspecified behavior of connective tissue of breast (D49.3)*
*neoplasm of unspecified behavior of skin of genital organs (D49.59)*
*neoplasm of unspecified behavior of vermilion border of lip (D49.0)*

D49.3 Neoplasm of unspecified behavior of breast CC/MCC Exc

EXCLUDES1 *neoplasm of unspecified behavior of skin of breast (D49.2)*

D49.4 Neoplasm of unspecified behavior of bladder CC/MCC Exc

5th D49.5 Neoplasm of unspecified behavior of other genitourinary organs

6th D49.51 Neoplasm of unspecified behavior of kidney

D49.511 Neoplasm of unspecified behavior of right kidney CC/MCC Exc

**AHA:** Q4 2016

D49.512 **Neoplasm of unspecified behavior of left kidney** CC/MCC Ex0

**AHA:** Q4 2016

D49.519 **Neoplasm of unspecified behavior of unspecified kidney** CC/MCC Ex0

**AHA:** Q4 2016

D49.59 **Neoplasm of unspecified behavior of other genitourinary organ** CC/MCC Ex0

**AHA:** Q4 2016

D49.6 **Neoplasm of unspecified behavior of brain** HCC RxHCC CC/MCC Ex0

EXCLUDES1 *neoplasm of unspecified behavior of cerebral meninges (D49.7)*

*neoplasm of unspecified behavior of cranial nerves (D49.7)*

D49.7 **Neoplasm of unspecified behavior of endocrine glands and other parts of nervous system** CC/MCC Ex0

EXCLUDES1 *neoplasm of unspecified behavior of peripheral, sympathetic, and parasympathetic nerves and ganglia (D49.2)*

5th D49.8 **Neoplasm of unspecified behavior of other specified sites**

EXCLUDES1 *neoplasm of unspecified behavior of eyelid (skin) (D49.2)*

*neoplasm of unspecified behavior of eyelid cartilage (D49.2)*

*neoplasm of unspecified behavior of great vessels (D49.2)*

*neoplasm of unspecified behavior of optic nerve (D49.7)*

D49.81 **Neoplasm of unspecified behavior of retina and choroid** CC/MCC Ex0

Dark area on retina

Retinal freckle

D49.89 **Neoplasm of unspecified behavior of other specified sites** CC/MCC Ex0

D49.9 **Neoplasm of unspecified behavior of unspecified site** CC/MCC Ex0

# Chapter 3: Diseases of Blood/Blood-Forming Organs & Disorders Involving Immune Mechanism (D50-D89)

## Chapter-Specific Coding Guidelines

**I.C.3. Chapter 3: Disease of the blood and blood-forming organs and certain disorders involving the immune mechanism (D50-D89)**

Reserved for future guideline expansion.

## Diseases of the blood and blood-forming organs and certain disorders involving the immune mechanism (D50-D89)

Excludes1 *autoimmune disease (systemic) NOS (M35.9)*

*certain conditions originating in the perinatal period (P00-P96)*

*complications of pregnancy, childbirth and the puerperium (O00-O9A)*

*congenital malformations, deformations and chromosomal abnormalities (Q00-Q99)*

*endocrine, nutritional and metabolic diseases (E00-E88)*

*human immunodeficiency virus [HIV] disease (B20)*

*injury, poisoning and certain other consequences of external causes (S00-T88)*

*neoplasms (C00-D49)*

*symptoms, signs and abnormal clinical and laboratory findings, not elsewhere classified (R00-R94)*

**This chapter contains the following blocks:**

| | |
|---|---|
| **D50-D53** | Nutritional anemias |
| **D55-D59** | Hemolytic anemias |
| **D60-D64** | Aplastic and other anemias and other bone marrow failure syndromes |
| **D65-D69** | Coagulation defects, purpura and other hemorrhagic conditions |
| **D70-D77** | Other disorders of blood and blood-forming organs |
| **D78** | Intraoperative and postprocedural complications of the spleen |
| **D80-D89** | Certain disorders involving the immune mechanism |

## Nutritional anemias (D50-D53)

4th D50 Iron deficiency anemia

INCLUDES *asiderotic anemia*
*hypochromic anemia*

D50.0 Iron deficiency anemia secondary to blood loss (chronic) CC/MCC Ex0

AHA: Q3 2019

Posthemorrhagic anemia (chronic)

EXCLUDES1 *acute posthemorrhagic anemia (D62)*
*congenital anemia from fetal blood loss (P61.3)*

D50.1 Sideropenic dysphagia CC/MCC Ex0

Kelly-Paterson syndrome
Plummer-Vinson syndrome

D50.8 Other iron deficiency anemias CC/MCC Ex0

Iron deficiency anemia due to inadequate dietary iron intake

D50.9 Iron deficiency anemia, unspecified CC/MCC Ex0

4th D51 Vitamin B12 deficiency anemia

EXCLUDES1 *vitamin B12 deficiency (E53.8)*

D51.0 Vitamin B12 deficiency anemia due to intrinsic factor deficiency CC/MCC Ex0

Addison anemia
Biermer anemia
Pernicious (congenital) anemia
Congenital intrinsic factor deficiency

D51.1 Vitamin B12 deficiency anemia due to selective vitamin B12 malabsorption with proteinuria CC/MCC Ex0

Imerslund (Gräsbeck) syndrome
Megaloblastic hereditary anemia

D51.2 Transcobalamin II deficiency CC/MCC Ex0

D51.3 Other dietary vitamin B12 deficiency anemia CC/MCC Ex0

Vegan anemia

D51.8 **Other vitamin B12 deficiency anemias** CC/MCC Ex0

D51.9 **Vitamin B12 deficiency anemia, unspecified** CC/MCC Ex0

4th D52 **Folate deficiency anemia**

EXCLUDES1 *folate deficiency without anemia (E53.8)*

D52.0 **Dietary folate deficiency anemia** CC/MCC Ex0

Nutritional megaloblastic anemia

D52.1 **Drug-induced folate deficiency anemia** CC/MCC Ex0

**Use additional** code for adverse effect, if applicable, to identify drug (T36-T50 with fifth or sixth character 5)

D52.8 **Other folate deficiency anemias** CC/MCC Ex0

D52.9 **Folate deficiency anemia, unspecified** CC/MCC Ex0

Folic acid deficiency anemia NOS

4th D53 **Other nutritional anemias**

INCLUDES *megaloblastic anemia unresponsive to vitamin B12 or folate therapy*

D53.0 **Protein deficiency anemia** CC/MCC Ex0

Amino-acid deficiency anemia

Orotaciduric anemia

EXCLUDES1 *Lesch-Nyhan syndrome (E79.1)*

D53.1 **Other megaloblastic anemias, not elsewhere classified** CC/MCC Ex0

Megaloblastic anemia NOS

EXCLUDES1 *Di Guglielmo's disease (C94.0)*

D53.2 **Scorbutic anemia** CC/MCC Ex0

EXCLUDES1 *scurvy (E54)*

D53.8 **Other specified nutritional anemias** CC/MCC Ex0

Anemia associated with deficiency of copper

Anemia associated with deficiency of molybdenum

Anemia associated with deficiency of zinc

EXCLUDES2 **nutritional deficiencies without anemia, such as:*

**copper deficiency NOS (E61.0)*

**molybdenum deficiency NOS (E61.5)*

**zinc deficiency NOS (E60)*

D53.9 **Nutritional anemia, unspecified** CC/MCC Ex0

**AHA:** Q4 2018

Simple chronic anemia

EXCLUDES1 *anemia NOS (D64.9)*

## Hemolytic anemias (D55-D59)

4th D55 **Anemia due to enzyme disorders**

EXCLUDES1 *drug-induced enzyme deficiency anemia (D59.2)*

D55.0 **Anemia due to glucose-6-phosphate dehydrogenase [G6PD] deficiency** CC/MCC Ex0

Favism

G6PD deficiency anemia

EXCLUDES1 *glucose-6-phosphate dehydrogenase (G6PD) deficiency without anemia (D75.A)*

D55.1 **Anemia due to other disorders of glutathione metabolism** CC/MCC Ex0

Anemia (due to) enzyme deficiencies, except G6PD, related to the hexose monophosphate [HMP] shunt pathway

Anemia (due to) hemolytic nonspherocytic (hereditary), type I

5th D55.2 **Anemia due to disorders of glycolytic enzymes**

EXCLUDES1 *disorders of glycolysis not associated with anemia (E74.81-)*

D55.21 **Anemia due to pyruvate kinase deficiency** CC/MCC Ex0

PK deficiency anemia

Pyruvate kinase deficiency anemia

D55.29 **Anemia due to other disorders of glycolytic enzymes** CC/MCC Ex0

Hexokinase deficiency anemia

Triose-phosphate isomerase deficiency anemia

D55.3 **Anemia due to disorders of nucleotide metabolism** CC/MCC Ex0

D55.8 **Other anemias due to enzyme disorders** CC/MCC Ex0

D55.9 **Anemia due to enzyme disorder, unspecified** CC/MCC Ex0

4th D56 **Thalassemia**

EXCLUDES1 *sickle-cell thalassemia (D57.4-)*

D56.0 **Alpha thalassemia** CC/MCC Ex0

Alpha thalassemia major

Hemoglobin H Constant Spring

Hemoglobin H disease

Hydrops fetalis due to alpha thalassemia

Severe alpha thalassemia

Triple gene defect alpha thalassemia

**Use additional** code, if applicable, for hydrops fetalis due to alpha thalassemia (P56.99)

EXCLUDES1 *alpha thalassemia trait or minor (D56.3)*

*asymptomatic alpha thalassemia (D56.3)*

*hydrops fetalis due to isoimmunization (P56.0)*

*hydrops fetalis not due to immune hemolysis (P83.2)*

**D56.1 Beta thalassemia** HCC CC/MCC Ex6

Beta thalassemia major
Cooley's anemia
Homozygous beta thalassemia
Severe beta thalassemia
Thalassemia intermedia
Thalassemia major

EXCLUDES1 *beta thalassemia minor (D56.3)*
*beta thalassemia trait (D56.3)*
*delta-beta thalassemia (D56.2)*
*hemoglobin E-beta thalassemia (D56.5)*
*sickle-cell beta thalassemia (D57.4-)*

**D56.2 Delta-beta thalassemia** HCC CC/MCC Ex6

Homozygous delta-beta thalassemia

EXCLUDES1 *delta-beta thalassemia minor (D56.3)*
*delta-beta thalassemia trait (D56.3)*

**D56.3 Thalassemia minor** CC/MCC Ex6

Alpha thalassemia minor
Alpha thalassemia silent carrier
Alpha thalassemia trait
Beta thalassemia minor
Beta thalassemia trait
Delta-beta thalassemia minor
Delta-beta thalassemia trait
Thalassemia trait NOS

EXCLUDES1 *alpha thalassemia (D56.0)*
*beta thalassemia (D56.1)*
*delta-beta thalassemia (D56.2)*
*hemoglobin E-beta thalassemia (D56.5)*
*sickle-cell trait (D57.3)*

D56.4 **Hereditary persistence of fetal hemoglobin [HPFH]** CC/MCC Ex0

D56.5 **Hemoglobin E-beta thalassemia** HCC CC/MCC Ex0

EXCLUDES1 *beta thalassemia (D56.1)*
*beta thalassemia minor (D56.3)*
*beta thalassemia trait (D56.3)*
*delta-beta thalassemia (D56.2)*
*delta-beta thalassemia trait (D56.3)*
*hemoglobin E disease (D58.2)*
*other hemoglobinopathies (D58.2)*
*sickle-cell beta thalassemia (D57.4-)*

D56.8 **Other thalassemias** CC/MCC Ex0

Dominant thalassemia
Hemoglobin C thalassemia
Mixed thalassemia
Thalassemia with other hemoglobinopathy

EXCLUDES1 *hemoglobin C disease (D58.2)*
*hemoglobin E disease (D58.2)*
*other hemoglobinopathies (D58.2)*
*sickle-cell anemia (D57.-)*
*sickle-cell thalassemia (D57.4-)*

D56.9 **Thalassemia, unspecified** CC/MCC Ex0

Mediterranean anemia (with other hemoglobinopathy)

4th D57 **Sickle-cell disorders**

**Use additional** code for any associated fever (R50.81)

EXCLUDES1 *other hemoglobinopathies (D58.-)*

5th D57.0 Hb-SS disease with crisis

Sickle-cell disease with crisis

Hb-SS disease with (vaso-occlusive) pain

D57.00 Hb-SS disease with crisis, unspecified HCC MCC RxHCC CC/MCC Ex6

Hb-SS disease with (painful) crisis NOS

Hb-SS disease with (vaso-occlusive) pain NOS

D57.01 Hb-SS disease with acute chest syndrome HCC MCC RxHCC CC/MCC Ex6

D57.02 Hb-SS disease with splenic sequestration HCC MCC RxHCC CC/MCC Ex6

# Chapter 4: Endocrine, Nutritional and Metabolic Diseases (E00-E89)

## Chapter-Specific Coding Guidelines

**I.C.4. Chapter 4: Endocrine, Nutritional, and Metabolic Diseases (E00-E89)**

**a. Diabetes mellitus**

The diabetes mellitus codes are combination codes that include the type of diabetes mellitus, the body system affected, and the complications affecting that body system. As many codes within a particular category as are necessary to describe all of the complications of the disease may be used. They should be sequenced based on the reason for a particular encounter. Assign as many codes from categories E08 – E13 as needed to identify all of the associated conditions that the patient has.

**1) Type of diabetes**

The age of a patient is not the sole determining factor, though most type 1 diabetics develop the condition before reaching puberty. For this reason type 1 diabetes mellitus is also referred to as juvenile diabetes.

**(a) Presymptomatic Type 1 Diabetes Mellitus**

Codes E10.A-, Type 1 diabetes mellitus, presymptomatic, are assigned for early-stage type 1 diabetes that predates the onset of symptoms.

**(b)** *Type 2 diabetes mellitus in remission*

**Code E11.A, Type 2 diabetes mellitus without complications in remission, is assigned based on provider documentation that the diabetes mellitus is in remission. If the documentation is unclear as to whether the Type 2 diabetes mellitus has achieved remission, the provider should be queried. For example, the term "resolved" is not synonymous with remission.**

**2) Type of diabetes mellitus not documented**

If the type of diabetes mellitus is not documented in the medical record the default is E11.-, Type 2 diabetes mellitus.

**3) Diabetes mellitus and the use of insulin, oral hypoglycemics, and injectable non-insulin drugs**

If the documentation in a medical record does not indicate the type of diabetes but does indicate that the patient uses insulin, code E11-, Type 2 diabetes mellitus, should be assigned. Additional code(s) should be assigned from category Z79 to identify the long-term (current) use of insulin, oral hypoglycemic drugs, or injectable non-insulin antidiabetic, as follows:

If the patient is treated with both oral hypoglycemic drugs and insulin, both code Z79.4, Long term (current) use of insulin, and code Z79.84, Long term (current) use of oral hypoglycemic drugs, should be assigned.

If the patient is treated with both insulin and an injectable non-insulin antidiabetic drug, assign codes Z79.4, Long term (current) use of insulin, and Z79.85, Long-term (current) use of injectable non-insulin antidiabetic drugs.

If the patient is treated with both oral hypoglycemic drugs and an injectable non-insulin antidiabetic drug, assign codes Z79.84, Long term (current) use of oral hypoglycemic drugs, and Z79.85, Long-term (current) use of injectable non-insulin antidiabetic drugs.

Code Z79.4 should not be assigned if insulin is given temporarily to bring a type 2 patient's blood sugar under control during an encounter.

**4) Diabetes mellitus in pregnancy and gestational diabetes**

*See Section I.C.15. Diabetes mellitus in pregnancy.*

*See Section I.C.15. Gestational (pregnancy induced) diabetes.*

5) **Complications due to insulin pump malfunction**

(a) **Underdose of insulin due to insulin pump failure**

An underdose of insulin due to an insulin pump failure should be assigned to a code from subcategory T85.6, Mechanical complication of other specified internal and external prosthetic devices, implants and grafts, that specifies the type of pump malfunction, as the principal or first-listed code, followed by code T38.3X6-, Underdosing of insulin and oral hypoglycemic [antidiabetic] drugs. Additional codes for the type of diabetes mellitus and any associated complications due to the underdosing should also be assigned.

(b) **Overdose of insulin due to insulin pump failure**

The principal or first-listed code for an encounter due to an insulin pump malfunction resulting in an overdose of insulin, should also be T85.6-, Mechanical complication of other specified internal and external prosthetic devices, implants and grafts, followed by code T38.3X1-, Poisoning by insulin and oral hypoglycemic [antidiabetic] drugs, accidental (unintentional).

6) **Secondary diabetes mellitus**

Codes under categories E08, Diabetes mellitus due to underlying condition, E09, Drug or chemical induced diabetes mellitus, and E13, Other specified diabetes mellitus, identify complications/manifestations associated with secondary diabetes mellitus. Secondary diabetes is always caused by another condition or event (e.g., cystic fibrosis, malignant neoplasm of pancreas, pancreatectomy, adverse effect of drug, or poisoning).

(a) **Secondary diabetes mellitus and the use of insulin, oral hypoglycemic drugs, or injectable non-insulin drugs**

For patients with secondary diabetes mellitus who routinely use insulin, oral hypoglycemic drugs, or injectable non-insulin drugs, additional code(s) from category Z79 should be assigned to identify the long-term (current) use of insulin, oral hypoglycemic drugs, or non-injectable non-insulin drugs as follows:

If the patient is treated with both oral hypoglycemic drugs and insulin, both code Z79.4, Long term (current) use of insulin, and code Z79.84, Long term (current) use of oral hypoglycemic drugs, should be assigned.

If the patient is treated with both insulin and an injectable non- insulin antidiabetic drug, assign codes Z79.4, Long- term (current) use of insulin, and Z79.85, Long-term (current) use of injectable non-insulin antidiabetic drugs.

If the patient is treated with both oral hypoglycemic drugs and an injectable non-insulin antidiabetic drug, assign codes Z79.84, Long-term (current) use of oral hypoglycemic drugs, and Z79.85, Long-term (current) use of injectable non-insulin antidiabetic drugs.

Code Z79.4 should not be assigned if insulin is given temporarily to bring a secondary diabetic patient's blood sugar under control during an encounter.

(b) **Assigning and sequencing secondary diabetes codes and its causes**

The sequencing of the secondary diabetes codes in relationship to codes for the cause of the diabetes is based on the Tabular List instructions for categories E08, E09 and E13.

(i) **Secondary diabetes mellitus due to pancreatectomy**

For postpancreatectomy diabetes mellitus (lack of insulin due to the surgical removal of all or part of the pancreas), assign code E89.1, Postprocedural hypoinsulinemia. Assign a code from category E13 as the principal or first- listed diagnosis and a code from subcategory Z90.41, Acquired absence of pancreas, as **an** additional code.

(ii) **Secondary diabetes due to drugs**

Secondary diabetes may be caused by an adverse effect of correctly administered medications, poisoning or sequela of poisoning.

*See section I.C.19.e. for coding of adverse effects and poisoning, and section I.C.20 for external cause code reporting.*

**b. Obesity**

**The obesity codes in category E66, Overweight and obesity, include codes related to the cause of obesity, such as drug-induced obesity (E66.1), and codes related to effects of obesity, such as code E66.2, Morbid (severe) obesity with alveolar hypoventilation. There are other codes related to obesity in other categories of the classification, such as E88.82, Obesity due to disruption of MC4R pathway; and codes in fifth character subcategory O99.21, Obesity complicating pregnancy, childbirth, and the puerperium.**

1) **Obesity class**

**The obesity class codes in subcategory E66.81, Obesity class, require a fifth character to convey the severity of obesity. The obesity class should be documented in the medical record by the provider for these codes to be assigned. The obesity class codes can be reported with other obesity codes in the classification found in Chapters 4 and 15 to fully describe the condition. However, if both class 3 obesity and morbid obesity are documented, only a code for class 3 obesity should be assigned as it is more specific.**

# Anatomy of the Endocrine System

## Introduction

The endocrine system is a series of ductless glands that secrete hormones directly into the blood. These hormones target specific organs and help the body to maintain homeostasis.

### 1. An Outline of the Endocrine System

a) The endocrine system (Figure 4.a) is primarily responsible for maintaining the body's homeostasis through various hormones.
b) The endocrine system is based on the ductless endocrine glands that secrete their hormones directly into the blood stream. These hormones are further carried to the target organs through the blood stream.
c) The pituitary gland (or hypophysis) is regarded as the master gland of the endocrine system. This gland is monitored and controlled by the hypothalamus of the brain.

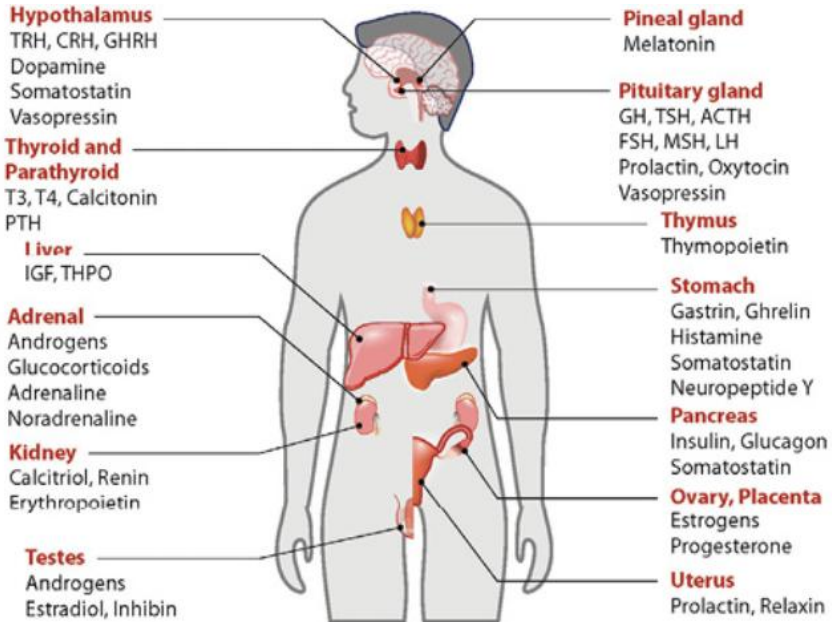

**Figure 4.a Endocrine System Anatomy and Hormones**

**2. The Endocrine Hormones**

a) The names of various endocrine hormones of the body are as follows:
   i) epinephrine
   ii) norepinephrine
   iii) oxytocin
   iv) vasopressin
   v) insulin
   vi) growth hormone
   vii) cortisol
   viii) estrogen
   ix) testosterone

b) The hormones monitor and control the processes of cellular respiration, growth, reproduction and electrolyte balances of the body. They also regulate the reproductive cycles, growth and the secretion of other hormones.

**3. The Hypothalamus (of the Brain)**

a) The hypothalamus controls the secretions of the pituitary gland.
b) The hypothalamus controls and monitors the secretions of the endocrine system.
c) The endocrine system can influence the functions of the hypothalamus via negative feedback mechanisms.

**4. The Major Endocrine Glands**

a) The names of the major endocrine glands are as follows:
   i) anterior pituitary gland
   ii) posterior pituitary gland
   iii) pineal gland
   iv) thyroid gland
   v) parathyroid gland
   vi) thymus
   vii) adrenal gland
   viii) pancreatic islets
   ix) ovaries
   x) testes

**5. The Anatomy of the Anterior Pituitary Gland**

The anterior pituitary gland is constituted by the glandular epithelium and generates the following hormones, which are listed below:

a) **Growth Hormone**
The growth hormone stimulates cell metabolism and growth of bones and muscles.

b) **Thyroid Stimulating Hormone (TSH)**
The TSH stimulates the thyroid gland for the production of T3, T4 and calcitonin hormones.

c) **Adrenocorticotropic Hormone (ACTH)**
The ACTH stimulates the adrenal cortex for the secretion of the hormone cortisol.

d) **Melanocyte Stimulating Hormone (MSH)**
The MSH stimulates melanocytes for the production of melanin, which causes darkening of the skin.

e) **Luteinizing Hormone (LH)**
The LH stimulates the production of testosterone in males and progesterone in females.

f) **Prolactin**
The Prolactin provides stimulation for milk production in the mammary glands of female after child birth.

**6. The Anatomy of the Posterior Pituitary Gland**

The posterior pituitary gland is also known as neurohypophysis. It is made up of the posterior lobe of the pituitary gland. The hormones of the posterior pituitary gland are listed below:

a) **Antidiuretic Hormone (ADH)/Vasopressin**
Function of vasopressin is to enhance water re-absorption in the kidney tubules. Deficiency of vasopressin can cause Diabetes insipidus.

b) **Oxytocin**
Oxytocin facilitates childbirth by causing the contraction of uterine smooth muscles. It also facilitates lactation by causing constriction of the mammary glands during breastfeeding.

**7. The Anatomy of the Thyroid Gland**

a) The thyroid gland is located below the thyroid cartilage in the neck region. It is one of the largest endocrine glands in the body.
b) The overactive thyroid gland causes excessive secretion of thyroid hormone or hyperthyroidism.
c) The underactive thyroid gland causes a condition of lack of thyroid hormone, which is known as the hypothyroidism.
d) The hormone calcitonin is secreted by the extrafollicular cells of the thyroid gland. It causes an increased excretion of the calcium and phosphate ions via the kidneys.

**8. The Anatomy of the Parathyroid Glands**

a) The parathyroid glands are four in number and remain embedded in the posterior surface of the thyroid gland in the neck region. These glands secrete parathyroid hormone or parathormone (PTH).
b) PTH stimulates the bone cells to release calcium and phosphate into the blood stream.
c) A deficiency of PTH causes hypoparathyroidism.
d) The high levels of PTH can result in the condition of hyperparathyroidism.

**9. The Anatomy of Adrenal Glands**

a) The adrenal (or suprarenal) glands are located on top of each kidney.
b) The adrenal gland is divided into the following components:
   i) adrenal medulla (or the inner portion)
   ii) adrenal cortex (or the outer portion)
c) The hormones epinephrine (or adrenalin) and norepinephrine (or noradrenalin) are produced by the adrenal medulla.
d) The adrenal cortex is divided into the following three layers:
   i) outer layer of adrenal cortex secretes aldosterone, which is a mineralocorticoid hormone and regulates sodium reabsorption and potassium excretion by the kidney.
   ii) hormone cortisol (or hydrocortisone) is secreted by the middle layer of adrenal cortex. It stimulates the liver to manufacture glucose from the circulating amino acids. The cortisol also possesses anti-inflammatory properties.

iii) adrenal male sex hormones (or androgens) are produced by the inner layer of the adrenal cortex. These hormones enhance the male sex characteristics. The androgens are also the precursors of all estrogens (or the female sex hormones) and stimulate the female sex drive. Testosterone is the primary and most well-known androgen.

e) A deficit of adrenal cortex hormones causes Addison's disease.
f) An increased secretion of adrenal cortex causes Cushing's syndrome.

**10. The Anatomy of the Pancreas**

a) The pancreas is a glandular organ of both digestive and endocrine systems.
b) The islets of Langerhans of pancreas constitute its endocrine portion, and produce insulin and glucagon hormones for the regulation of blood glucose levels.
c) The blood glucose concentration is regulated by the negative feedback mechanism.
d) The clinical abnormality of diabetes mellitus is caused by the insufficient production of insulin.

**11. The Anatomy of the Testes and Ovaries**

a) Each of the two testes is the component of the reproductive and endocrine systems and produces the male sex hormone, testosterone.
b) Testosterone is responsible for the development of secondary male sex characteristics, which include facial and chest hairs, narrow hips, broad shoulders and deep voice.
c) Each of the two ovaries is an ovum-producing reproductive organ and secretes estrogen and progesterone, which are the female sex hormones.
d) Estrogen and progesterone are responsible for the development of the female reproductive organs and the development of secondary female sex characteristics, which include the fat deposition on thighs, hips and legs, high-pitched voice, broad hips and breast enlargement.

**12. The Anatomy of the Thymus Gland**

a) The thymus gland is regarded as a specialized organ of the immune system that produces the hormone thymosin.
b) Thymosin stimulates the production of the T-lymphocyte white blood cells (or T cells) that are critical cells of the adaptive immune system and protect the body against the invasion of foreign microbes.

**13. The Anatomy of the Pineal Gland**

a) The pineal gland is also known as the pineal body, epiphysis cerebri or epiphysis. It is a small endocrine gland located near the thalamus inside the human brain.
b) The pineal gland secretes the following hormones:
   i) melatonin, which regulates the body rhythms (wake and sleep patterns) and inhibits the functions of the reproductive system.
   ii) serotonin, which acts as a neurotransmitter and vasoconstrictor.

# Common Pathologies

**Adrenal Insufficiency**
This is a condition in which the production of steroid hormones such as cortisol and aldosterone becomes low. Symptoms include fatigue, stomach upset, dehydration, and skin changes. Addison's disease is a type of adrenal insufficiency.

**Cushing's Syndrome**
This is a condition in which overproduction of a pituitary gland hormone (ACTH) leads to an overactive adrenal gland. A similar condition called Cushing's disease may occur in people, particularly children, who take high doses of corticosteroid medications.

**Gigantism (acromegaly) and other growth hormone problems**
This is a condition in which, if the pituitary gland produces too much growth hormone, a child's bones and body parts may grow abnormally fast. If growth hormone levels are too low, a child can stop growing in height.

**Hyperthyroidism**
This is a condition in which the thyroid gland produces too much thyroid hormone, leading to weight loss, fast heart rate, sweating, and nervousness. The most common cause for an overactive thyroid is an autoimmune disorder called Grave's disease.

**Hypothyroidism**
This is a condition in which, the thyroid gland does not produce enough thyroid hormone, leading to fatigue, constipation, dry skin, and depression. The underactive gland can cause slowed development in children. Some types of hypothyroidism are present at birth.

**Hypopituitarism**
This is a condition in which the pituitary gland releases little or no hormones. It may be caused by a number of different diseases. Women with this condition may stop getting their periods.

**Polycystic Ovary Syndrome (PCOS) (Figure 4.b)**
This is a condition in which overproduction of androgens interfere with the development of eggs and their release from the female ovaries. PCOS is a leading cause of infertility.

**Precocious Puberty**
This is a condition in which abnormally early puberty occurs when glands tell the body to release sex hormones too soon in life.

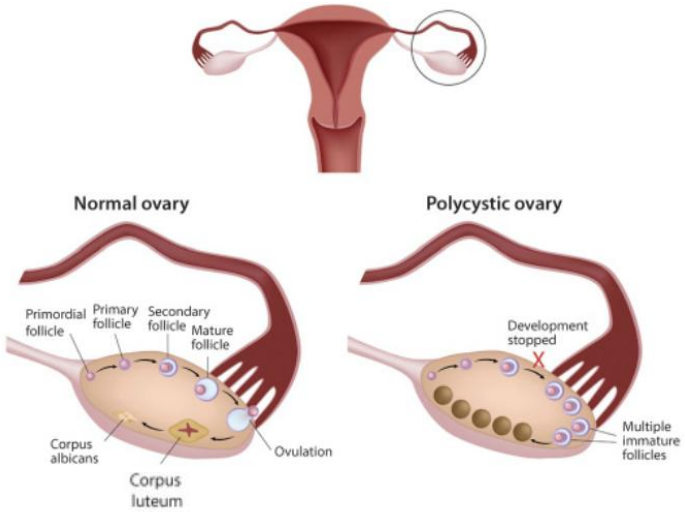

**Figure 4.b Polycystic Ovary Syndrome (PCOS)**

## Endocrine, nutritional and metabolic diseases (E00-E89)

**NOTES** All neoplasms, whether functionally active or not, are classified in Chapter 2. Appropriate codes in this chapter (i.e. E05.8, E07.0, E16-E31, E34.-) may be used as additional codes to indicate either functional activity by neoplasms and ectopic endocrine tissue or hyperfunction and hypofunction of endocrine glands associated with neoplasms and other conditions classified elsewhere.

**EXCLUDES** *transitory endocrine and metabolic disorders specific to newborn (P70-P74)*

**This chapter contains the following blocks:**

| | |
|---|---|
| **E00-E07** | Disorders of thyroid gland |
| **E08-E13** | Diabetes mellitus |
| **E15-E16** | Other disorders of glucose regulation and pancreatic internal secretion |
| **E20-E35** | Disorders of other endocrine glands |
| **E36** | Intraoperative complications of endocrine system |
| **E40-E46** | Malnutrition |
| **E50-E64** | Other nutritional deficiencies |
| **E65-E68** | Overweight, obesity and other hyperalimentation |
| **E70-E88** | Metabolic disorders |
| **E89** | Postprocedural endocrine and metabolic complications and disorders, not elsewhere classified |

## Disorders of thyroid gland (E00-E07)

4th E00 **Congenital iodine-deficiency syndrome**

**Use additional** code (F70-F79) to identify associated intellectual disabilities.

Excludes *subclinical iodine-deficiency hypothyroidism (E02)*

E00.0 **Congenital iodine-deficiency syndrome, neurological type** RxHCC CC/MCC Ex6

Endemic cretinism, neurological type

## Diabetes mellitus (E08-E13)

4th E08 Diabetes mellitus due to underlying condition

See Official Guidelines, "Assigning and sequencing secondary diabetes codes and its causes" I.C.4.a.6.b, "Diabetes mellitus in pregnancy" I.C.15.g

**Code first** the underlying condition, such as:

- congenital rubella (P35.0)
- Cushing's syndrome (E24.-)
- cystic fibrosis (E84.-)
- malignant neoplasm (C00-C96)
- malnutrition (E40-E46)
- pancreatitis and other diseases of the pancreas (K85-K86.-)

**Use additional** code to identify control using:

- injectable non-insulin antidiabetic drugs (Z79.85)
- insulin (Z79.4)
- oral antidiabetic drugs (Z79.84)
- oral hypoglycemic drugs (Z79.84)

EXCLUDES1 *drug or chemical induced diabetes mellitus (E09.-)*

- *gestational diabetes (O24.4-)*
- *neonatal diabetes mellitus (P70.2)*
- *postpancreatectomy diabetes mellitus (E13.-)*
- *postprocedural diabetes mellitus (E13.-)*

# Chapter 5: Mental, Behavioral and Neurodevelopmental Disorders (F01-F99)

## Chapter-Specific Coding Guidelines

**I.C.5. Chapter 5: Mental, Behavioral and Neurodevelopmental disorders (F01–F99)**

**a. Pain disorders related to psychological factors**

Assign code F45.41, for pain that is exclusively related to psychological disorders. As indicated by the Excludes 1 note under category G89, a code from category G89 should not be assigned with code F45.41.

Code F45.42, Pain disorders with related psychological factors, should be used with a code from category G89, Pain, not elsewhere classified, if there is documentation of a psychological component for a patient with acute or chronic pain.

*See Section I.C.6. Pain.*

**b. Mental and behavioral disorders due to psychoactive substance use**

**1) In Remission**

Selection of codes describing "in remission" for categories F10-F19, Mental and behavioral disorders due to psychoactive substance use (categories F10-F19 with -.11, -.21, -.91) requires the provider's clinical judgment and are assigned only on the basis of provider documentation (as defined in the Official Guidelines for Coding and Reporting), unless otherwise instructed by the classification. Mild substance use disorders in early or sustained remission are classified to the appropriate codes for substance abuse in remission, and moderate or severe substance use disorders in early or sustained remission are classified to the appropriate codes for substance dependence in remission.

**2) Psychoactive Substance Use, Abuse and Dependence**

When the provider documentation refers to use, abuse and dependence of the same substance (e.g. alcohol, opioid, cannabis, etc.), only one code should be assigned to identify the pattern of use based on the following hierarchy:

- ❑ If both use and abuse are documented, assign only the code for abuse.
- ❑ If both abuse and dependence are documented, assign only the code for dependence.
- ❑ If use, abuse and dependence are all documented, assign only the code for dependence.
- ❑ If both use and dependence are documented, assign only the code for dependence.

**3) Psychoactive Substance Use, Unspecified**

As with all other unspecified diagnoses, the codes for unspecified psychoactive substance use (F10.9-, F11.9-, F12.9-, F13.9-, F14.9-, F15.9-, F16.9-, F18.9-, F19.9-) should only be assigned based on provider documentation and when they meet the definition of a reportable diagnosis (see Section III, Reporting Additional Diagnoses). These codes are to be used only when the psychoactive substance use is associated with a substance related disorder (chapter 5 disorders such as sexual dysfunction, sleep disorder, or a mental or behavioral disorder) or medical condition, and such a relationship is documented by the provider.

**4) Medical Conditions Due to Psychoactive Substance Use, Abuse and Dependence**

Medical conditions due to substance use, abuse, and dependence are not classified as substance-induced disorders. Assign the diagnosis code for the medical condition as directed by the Alphabetical Index along with the appropriate psychoactive substance use, abuse or dependence code. For example, for alcoholic pancreatitis due to alcohol dependence, assign the appropriate code from subcategory K85.2, Alcohol induced acute pancreatitis, and the appropriate code from subcategory F10.2, such as code F10.20, Alcohol dependence, uncomplicated. It would not be appropriate to assign code F10.288, Alcohol dependence with other alcohol-induced disorder.

5) **Blood Alcohol Level**

A code from category Y90, Evidence of alcohol involvement determined by blood alcohol level, may be assigned when this information is documented and the patient's provider has documented a condition classifiable to category F10, Alcohol related disorders. The blood alcohol level does not need to be documented by the patient's provider in order for it to be coded.

*See Section I.B.14. for blood alcohol level documentation by clinicians other than patient's provider.*

**c. Factitious Disorder**

Factitious disorder imposed on self or Munchausen's syndrome is a disorder in which a person falsely reports or causes his or her own physical or psychological signs or symptoms. For patients with documented factitious disorder on self or Munchausen's syndrome, assign the appropriate code from subcategory F68.1-, Factitious disorder imposed on self.

Munchausen's syndrome by proxy (MSBP) is a disorder in which a caregiver (perpetrator) falsely reports or causes an illness or injury in another person (victim) under his or her care, such as a child, an elderly adult, or a person who has a disability. The condition is also referred to as "factitious disorder imposed on another" or "factitious disorder by proxy." The perpetrator, not the victim, receives this diagnosis. Assign code F68.A, Factitious disorder imposed on another, to the perpetrator's record. For the victim of a patient suffering from MSBP, assign the appropriate code from categories T74, Adult and child abuse, neglect and other maltreatment, confirmed, or T76, Adult and child abuse, neglect and other maltreatment, suspected.

*See Section I.C.19.f. Adult and child abuse, neglect and other maltreatment*

**d. Dementia**

The ICD-10-CM classifies dementia (categories F01, F02, and F03) on the basis of the etiology and severity (unspecified, mild, moderate or severe). Selection of the appropriate severity level requires the provider's clinical judgment and codes should be assigned only on the basis of provider documentation (as defined in the *Official Guidelines for Coding and Reporting*), unless otherwise instructed by the classification. If the documentation does not provide information about the severity of the dementia, assign the appropriate code for unspecified severity.

If a patient is admitted to an inpatient acute care hospital or other inpatient facility setting with dementia at one severity level and it progresses to a higher severity level, assign one code for the highest severity level reported during the stay.

## Mental, Behavioral and Neurodevelopmental disorders (F01-F99)

INCLUDES *disorders of psychological development*

EXCLUDES2 *symptoms, signs and abnormal clinical laboratory findings, not elsewhere classified (R00-R99)*

**This chapter contains the following blocks:**

| | |
|---|---|
| **F01-F09** | Mental disorders due to known physiological conditions |
| **F10-F19** | Mental and behavioral disorders due to psychoactive substance use |
| **F20-F29** | Schizophrenia, schizotypal, delusional, and other non-mood psychotic disorders |

| **F90-F98** | Behavioral and emotional disorders with onset usually occurring in childhood and adolescence |
| **F99** | Unspecified mental disorder |

## Mental disorders due to known physiological conditions (F01-F09)

NOTES This block comprises a range of mental disorders grouped together on the basis of their having in common a demonstrable etiology in cerebral disease, brain injury, or other insult leading to cerebral dysfunction. The dysfunction may be primary, as in diseases, injuries, and insults that affect the brain directly and selectively; or secondary, as in systemic diseases and disorders that attack the brain only as one of the multiple organs or systems of the body that are involved.

# Chapter 6: Diseases of the Nervous System (G00-G99)

## Chapter-Specific Coding Guidelines

**I.C.6. Chapter 6: Diseases of the Nervous System (G00-G99)**

**a. Dominant/nondominant side**

Codes from category G81, Hemiplegia and hemiparesis, and subcategories G83.1, Monoplegia of lower limb, G83.2, Monoplegia of upper limb, and G83.3, Monoplegia, unspecified, identify whether the dominant or nondominant side is affected. Should the affected side be documented, but not specified as dominant or nondominant, and the classification system does not indicate a default, code selection is as follows:

- For ambidextrous patients, the default should be dominant.
- If the left side is affected, the default is non-dominant.
- If the right side is affected, the default is dominant.

**b. Pain - Category G89**

**1) General coding information**

Codes in category G89, Pain, not elsewhere classified, may be used in conjunction with codes from other categories and chapters to provide more detail about acute or chronic pain and neoplasm-related pain, unless otherwise indicated below.

If the pain is not specified as acute or chronic, post- thoracotomy, postprocedural, or neoplasm-related, do not assign codes from category G89.

A code from category G89 should not be assigned if the underlying (definitive) diagnosis is known, unless the reason for the encounter is pain control/ management and not management of the underlying condition.

When an admission or encounter is for a procedure aimed at treating the underlying condition (e.g., spinal fusion, kyphoplasty), a code for the underlying condition (e.g., vertebral fracture, spinal stenosis) should be assigned as the principal diagnosis. No code from category G89 should be assigned.

**(a) Category G89 Codes as Principal or First-Listed Diagnosis**

Category G89 codes are acceptable as principal diagnosis or the first-listed code:

- When pain control or pain management is the reason for the admission/encounter (e.g., a patient with displaced intervertebral disc, nerve impingement and severe back pain presents for injection of steroid into the spinal canal). The underlying cause of the pain should be reported as an additional diagnosis, if known.
- When a patient is admitted for the insertion of a neurostimulator for pain control, assign the appropriate pain code as the principal or first-listed diagnosis. When an admission or encounter is for a procedure aimed at treating the underlying condition and a neurostimulator is inserted for pain control during the same admission/encounter, a code for the underlying condition should be assigned as the principal diagnosis and the appropriate pain code should be assigned as a secondary diagnosis.

**(b) Use of Category G89 Codes in Conjunction with Site Specific Pain Codes**

**(i) Assigning Category G89 and Site-Specific Pain Codes**

Codes from category G89 may be used in conjunction with codes that identify the site of pain (including codes from chapter 18) if the category G89 code provides additional information. For example, if the code describes the site of the pain, but does not fully describe whether the pain is acute or chronic, then both codes should be assigned.

**(ii) Sequencing of Category G89 Codes with Site- Specific Pain Codes**

The sequencing of category G89 codes with site- specific pain codes (including chapter 18 codes), is dependent on the circumstances of the encounter/admission as follows:

- If the encounter is for pain control or pain management, assign the code from category G89 followed by the code identifying the specific site of pain (e.g., encounter for pain management for acute neck pain from trauma is assigned code G89.11, Acute pain due to trauma, followed by code M54.2, Cervicalgia, to identify the site of pain).
- If the encounter is for any other reason except pain control or pain management, and a related definitive diagnosis has not been established (confirmed) by the provider, assign the code for the specific site of pain first, followed by the appropriate code from category G89.

**2) Pain due to devices, implants and grafts**

*See Section I.C.19. Pain due to medical devices.*

**3) Postoperative Pain**

The provider's documentation should be used to guide the coding of postoperative pain, as well as *Section III. Reporting Additional Diagnoses and Section IV. Diagnostic Coding and Reporting in the Outpatient Setting.*

The default for post-thoracotomy and other postoperative pain not specified as acute or chronic is the code for the acute form.

Routine or expected postoperative pain immediately after surgery should not be coded.

**(a) Postoperative pain not associated with specific postoperative complication**

Postoperative pain not associated with a specific postoperative complication is assigned to the appropriate postoperative pain code in category G89.

**(b) Postoperative pain associated with specific postoperative complication**

Postoperative pain associated with a specific postoperative complication (such as painful wire sutures) is assigned to the appropriate code(s) found in Chapter 19, Injury, poisoning, and certain other consequences of external causes. If appropriate, use additional code(s) from category G89 to identify acute or chronic pain (G89.18 or G89.28).

**4) Chronic pain**

Chronic pain is classified to subcategory G89.2. There is no time frame defining when pain becomes chronic pain. The provider's documentation should be used to guide use of these codes.

**5) Neoplasm Related Pain**

Code G89.3 is assigned to pain documented as being related, associated or due to cancer, primary or secondary malignancy, or tumor. This code is assigned regardless of whether the pain is acute or chronic.

This code may be assigned as the principal or first-listed code when the stated reason for the admission/encounter is documented as pain control/pain management. The underlying neoplasm should be reported as an additional diagnosis.

When the reason for the admission/encounter is management of the neoplasm and the pain associated with the neoplasm is also documented, code G89.3 may be assigned as an additional diagnosis. It is not necessary to assign an additional code for the site of the pain.

*See Section I.C.2. for instructions on the sequencing of neoplasms for all other stated reasons for the admission/encounter (except for pain control/pain management).*

**6) Chronic pain syndrome**

Central pain syndrome (G89.0) and chronic pain syndrome (G89.4) are different than the term "chronic pain," and therefore codes should only be used when the provider has specifically documented this condition.

*See Section I.C.5. Pain disorders related to psychological factors.*

# Anatomy of the Nervous System

## Introduction

The nervous system (Figure 6.a) constitutes the body's control center and the communication network and directs the functions of multiple body organs and systems. It helps the individual to interpret external environmental events and respond to various environmental stimuli. The nervous system includes the following types and components:

1. **The Central Nervous System (CNS)**

   The central nervous system is regarded as the control center of the entire nervous system. It is composed of the brain and the spinal cord. The CNS receives the body's sensations and information about the external environmental changes via receptors and sense organs, and directs the body to act accordingly in response to these external environmental stimuli.

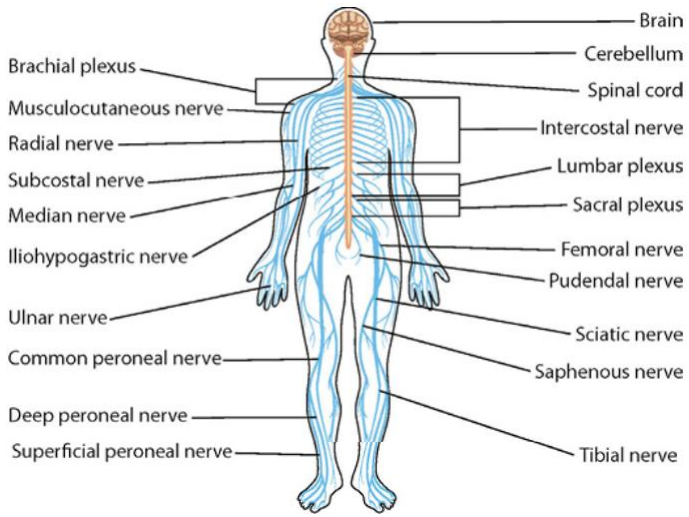

**Figure 6.a Human Nervous System**

2. **The Peripheral Nervous System (PNS)**

The peripheral nervous system is composed of the nerves that connect the brain and spinal cord with the glands, muscles and sensory receptors. The PNS can be further divided into the following subcategories:

a) **The Afferent Peripheral System**

The afferent peripheral system is composed of sensory (or afferent) neurons that transfer information to the brain and spinal cord via peripheral receptors.

b) **The Efferent Peripheral System**

The efferent peripheral system consists of the motor (or efferent) neurons that form a communication channel (for information transfer) between the brain, spinal cord, muscles and glands. This system of neurons is further divided into the following subcategories:

i) **Somatic Nervous System**

The somatic nervous system helps the individual to respond to the changes in the external environment by conducting the impulses from the brain and spinal cord to the skeletal muscle.

ii) **Autonomic Nervous System**

The autonomic nervous system (ANS) is an involuntary system of nerves that conduct impulses from the brain and spinal cord to the smooth muscles of the intestine, the cardiac muscles of the heart, and the endocrine glands. The organs of this particular system receive nerve fibers from the following divisions of the ANS:

(a) **Sympathetic Division**

The sympathetic division acts to mobilize the body's resources and induce the fight-or-flight response. This system uses norepinephrine as a neurotransmitter to speed up its activity through energy expenditure.

(b) **Parasympathetic Division**

The parasympathetic division facilitates the vegetative activities of human body (like digestion, urination and defecation).

3. **The Spinal Cord (or Medulla Spinalis)**

The spinal cord initiates as a continuation of the medulla oblongata of the brainstem. Its length varies between 16 to 18 inches and is made up of a series of 31 segments, each of which gives rise to a pair of spinal nerves. The human spinal cord is further protected by a series of connective tissue membranes that are known as the spinal meninges.

4. **The Brain or Encephalon**

The brain (Figure 6.b) is regarded as one of the largest organs of the body and weighs about 3 pounds in an average adult. The major parts of the human brain are described as follows:

a) **The Brainstem**

The brainstem is regarded as the posterior portion of the brain, which is structurally continuous with the spinal cord. It is composed of the medulla oblongata, the pons Varolii, and the midbrain.

b) **The Diencephalon**

The diencephalon is located between the two cerebral hemispheres, and superiorly to the midbrain. It surrounds the third ventricle of the brain and consists of the thalamus and hypothalamus regions.

c) **The Cerebrum (or Telencephalon)**

The cerebrum constitutes the bulk of the brain and is composed of the gray matter (or cerebral cortex), longitudinal fissure, and the right and left cerebral hemispheres. It is further subdivided into the frontal, parietal, occipital and temporal lobes.

d) **The Cerebellum**

The cerebellum is regarded as the second largest portion of the brain. It is located under the occipital lobes of the cerebrum, and behind the pons and medulla oblongata of brainstem. The two partially separated hemispheres of the cerebellum are connected together by a centrally constricted structure, which is known as the vermis. The cerebellum is constituted primarily by the white matter and a thin layer of gray matter on its surface, which is known as the cerebellar cortex. The cerebrospinal fluid (CSF) is a colorless fluid that fills up the subarachnoid space (or interval between the arachnoid membrane and pia mater) and the ventricular system inside and around the spinal cord and brain.

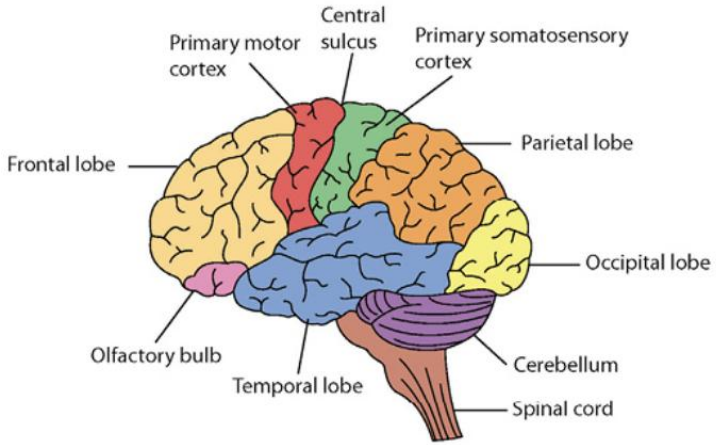

**Figure 6.b Anatomy of the Brain**

**5. The Cranial Nerves**

The cranial nerves (Figure 6.c) are based on 12 pairs that remain attached to the brain and leave the skull through various foramina in the cranial base. The names of the various cranial nerves are listed below:

a) Olfactory (1st cranial nerve)
b) Optic (2nd cranial nerve)
c) Oculomotor (3rd cranial nerve)
d) Trochlear (4th cranial nerve)
e) Trigeminal (5th cranial nerve)
f) Abducens (6th cranial nerve)
g) The Facial (7th cranial nerve)
h) Acoustic (8th cranial nerve)
i) Glossopharyngeal (9th cranial nerve)
j) Vagus/Pneumogastric (10th cranial nerve)
k) Accessory (11th cranial nerve)
l) Hypoglossal (12th cranial nerve)

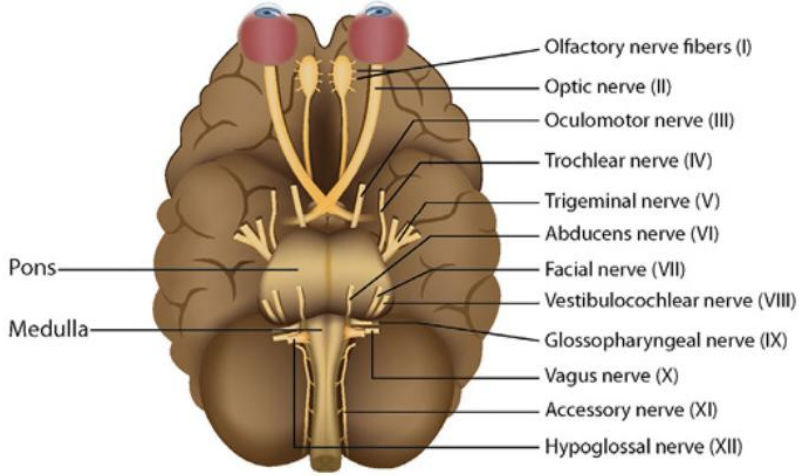

**Figure 6.c The Cranial Nerves**

6. **The Spinal Nerves**

The 31 pairs of spinal nerves originate from the integration of the dorsal and ventral roots of the spinal nerves. These nerves carry the motor, sensory and the autonomic signals between the spinal cord and the body. They are also called mixed nerves as they consist of both motor and sensory fibers. The spinal nerves exit the vertebral column between the adjacent vertebrae. The naming convention of the spinal nerves is based on the region and level of the spinal cord from which these nerves arise. The division of the spinal nerves is documented below:

a) 8 pairs of cervical nerves (C1-C8)
b) 12 pairs of thoracic nerves (T1-T12)
c) 5 pairs of lumbar nerves (L1-L5)
d) 5 pairs of sacral nerves (S1-S5)
e) 1 pair of coccygeal nerves (Cx)

7. **The Sympathetic Nerves**

The sympathetic nerves are a part of the sympathetic nervous system, which innervates the striated muscles of the heart, the smooth muscles, and multiple glands of the body. The sympathetic nervous system is that division of the autonomic nervous system which prepares the body for stressful conditions requiring energy expenditure. The nerve fibers of this system originate from the thoracic and lumbar regions of the spinal cord. The axons of these nerves leave the spinal cord via the anterior root. They further pass near the spinal ganglion and integrate with the anterior rami of the spinal nerves.

## Common Pathologies

**Muscular Dystrophy (MD) (Figure 6.d)**
A genetic disorder characterized by progressive muscle weakness, abnormal muscle protein, and death of muscle tissues and cells. MD is classified as both a myogenic and a nervous system disorder.

**Figure 6.d Muscular Dystrophy (MD)**

**Spina Bifida**

This is a type of birth defect of the brain, spine, or spinal cord, also known as the neural tube defect. It happens if the spinal column of the fetus doesn't close completely during the first month of pregnancy.

**Parkinson's Disease (PD)**

This is a progressive disorder of the nervous system that affects the movement and is known as a movement disorder.

**Alzheimer's Disease (AD)**

This is a brain disorder that seriously affects a person's ability to carry out daily activities. Alzheimer's disease is the most common form of dementia.

**Strokes**

This is a condition in which, due to lack of oxygen, the sudden death of brain cells occurs and can be caused by an obstruction in the blood flow to the brain. The more common kind, called ischemic stroke, is caused by a blood clot that blocks or plugs a blood vessel in the brain. The other kind, called hemorrhagic stroke (Figure 6.e), is caused by a blood vessel that breaks and bleeds into the brain. "Mini-strokes" or transient ischemic attacks (TIAs), occur when the blood supply to the brain is briefly interrupted.

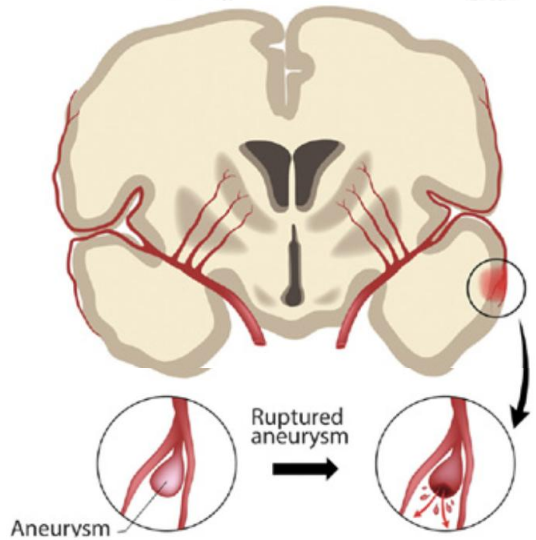

**Figure 6.e Hemorrhagic Stroke**

**Malignant Brain Tumor**
Cancer of the brain is usually called a malignant brain tumor.

**Meningitis**
The inflammation of the thin tissue that surrounds the brain and spinal cord, called the meninges, is known as Meningitis.

**Epilepsy**
This is a neurological condition that affects the nervous system. Epilepsy is also known as a seizure disorder that causes people to have recurring seizures.

**Bell's Palsy**
This condition occurs due to compression of a facial nerve.

# Chapter 7: Diseases of the Eye and Adnexa (H00-H59)

## Chapter-Specific Coding Guidelines

**I.C.7. Chapter 7: Diseases of the Eye and Adnexa (H00-H59)**

**a. Glaucoma**

**1) Assigning Glaucoma Codes**
Assign as many codes from category H40, Glaucoma, as needed to identify the type of glaucoma, the affected eye, and the glaucoma stage.

**2) Bilateral glaucoma with same type and stage**
When a patient has bilateral glaucoma and both eyes are documented as being the same type and stage, and there is a code for bilateral glaucoma, report only the code for the type of glaucoma, bilateral, with the seventh character for the stage.
When a patient has bilateral glaucoma and both eyes are documented as being the same type and stage, and the classification does not provide a code for bilateral glaucoma (i.e. subcategories H40.10, and H40.20) report only one code for the type of glaucoma with the appropriate seventh character for the stage.

**3) Bilateral glaucoma stage with different types or stages**
When a patient has bilateral glaucoma and each eye is documented as having a different type or stage, and the classification distinguishes laterality, assign the appropriate code for each eye rather than the code for bilateral glaucoma.
When a patient has bilateral glaucoma and each eye is documented as having a different type, and the classification does not distinguish laterality (i.e., subcategories H40.10, and H40.20), assign one code for each type of glaucoma with the appropriate seventh character for the stage.
When a patient has bilateral glaucoma and each eye is documented as having the same type, but different stage, and the classification does not distinguish laterality (i.e., subcategories H40.10 and H40.20), assign a code for the type of glaucoma for each eye with the seventh character for the specific glaucoma stage documented for each eye.

**4) Patient admitted with glaucoma and stage evolves during the admission**
If a patient is admitted with glaucoma and the stage progresses during the admission, assign the code for highest stage documented.

**5) Indeterminate stage glaucoma**
Assignment of the seventh character "4" for "indeterminate stage" should be based on the clinical documentation. The seventh character "4" is used for glaucomas whose stage cannot be clinically determined. This seventh character should not be confused with the seventh character "0", unspecified, which should be assigned when there is no documentation regarding the stage of the glaucoma.

**b. Blindness**
If "blindness" or "low vision" of both eyes is documented but the visual impairment category is not documented, assign code H54.3, Unqualified visual loss, both eyes. If "blindness" or "low vision" in one eye is documented but the visual impairment category is not documented, assign a code from H54.6-, Unqualified visual loss, one eye. If "blindness" or "visual loss" is documented without any information about whether one or both eyes are affected, assign code H54.7, Unspecified visual loss.

# Anatomy of the Eye

## Introduction

Eyes (Figure 7.a) are regarded as the organs of sight. They are located in the orbits of the skull. The eyelids and eyelashes serve to protect the eyes from foreign objects. Blinking of the eyelids lubricates the surface of the eye by spreading tears that are produced by the lacrimal gland.

### 1. The Organ of Sight

A typical human eye is in the form of a sphere and filled with the following two fluids:

a) **Aqueous Humor:** The frontal portion of the lens of the eye is known as the anterior compartment that remains filled with fluid, which is called the aqueous humor.

b) **Vitreous Humor:** The portion behind the lens of the eye is known as the posterior compartment that is filled with a fluid called the vitreous humor.

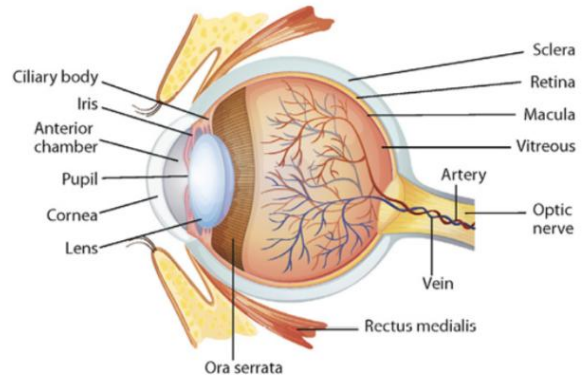

**Figure 7.a Anatomy of the Eye**

2. **The Other Parts of the Eye**
   a) **Ciliary Body and Muscle:** This is a ring of striated smooth muscle in the middle layer eye (vascular layer). It is triangular in the horizontal section and is coated by a double layer, the ciliary epithelium. The inner layer is transparent and covers the vitreous body and is a continuation of neural tissue of the retina. The outer layer is continuous with the retinal pigment epithelium and constitutes the cells of the dilator muscle.
   b) **Suspensory Ligament:** A series of fibers that connect the ciliary body of the eye with the lens, holding it in place. Suspensory ligaments are thin fibers that connect the ciliary body of the lens with the receptors. It is a thickening of Tenon's capsule, the dense connective tissue capsule surrounding the globe and separating it from orbital fat. Suspensory ligaments in the eye lens allow easy focusing.
   c) **Iris:** A thin, circular structure in the eye which covers the sclera. It is responsible for controlling the diameter and size of the pupils and thus the amount of light reaching the retina. In response to the amount of light entering the eye, muscles attached to the iris expand or contract the aperture at the center of the iris, known as the pupil.
   d) **Pupil:** The dark center opening in the middle of the iris is called the pupil. The pupil is a hole located in the center of the iris of the eye that allows light to enter the retina. The pupil changes size to adjust for the amount of light available.
   e) **Cornea:** The cornea is transparent and comprises the front part of the eye that covers the iris, pupil and anterior chamber. Together with the lens, the cornea refracts light accounting for approximately two-thirds of the eye's total optical power.
   f) **Lens:** The crystalline lens is a biconvex structure and is suspended behind the colored iris. The lens is behind the covering known as the cornea. The lens is more flat on its anterior side than on its posterior side.
   g) **Retina:** The vertebrate retina is 0.5 mm thick and lines the back of the eye. It is a light-sensitive layer of tissue, lining the inner surface of the eye. The optic nerve contains the ganglion cell axons running to the brain.
   h) **Retinal Arteries and Veins:** The retinal arteries and veins emerge from the nasal side of the optic disc. Vessels directed temporally have an arching course; those directed nasally have a radial course. Arteries are brighter red and narrower than veins.
   i) **Fovea Centralis:** The fovea is the depression in the inner retinal surface, about 1.5 mm wide and is specialized for maximum visual acuity. This is the thickest part of the retina. This part has the highest density of cones in the eye.
   j) **Optic Nerve:** The optic nerve is the second of twelve paired cranial nerves, but is considered to be part of the central nervous system as it is derived from an out-pouching of the diencephalon during embryonic development. It consists mainly of fibers derived from the ganglionic cells of the retina. Its fibers are covered with myelin produced by oligodendrocytes rather than Schwann cells.
   k) **Choroid Coat:** The choroid, also known as the choroidea or choroid coat, is the vascular layer of the eye containing connective tissue and lies between the retina and the sclera. It contains the retinal pigmented epithelial cells and provides oxygen and nourishment to the retina.
   l) **Sclera:** The posterior five-sixths of the connective tissue coat of the ocular globe is formed by sclera. It maintains the shape of the globe and provides an attachment for the extraocular muscle insertions. The sclera is perforated by many nerves and vessels passing through the posterior scleral foramen, the hole that is formed by the optic nerve. The inner layer of the sclera (lamina fusca) blends with the suprachoroidal and supraciliary lamellae of the uveal tract.
   m) **Blind Spot:** This is a small portion of the visual field of each eye where the optic nerve and blood vessels pass through to connect to the back of the eye and is also called an optic disk. There are no photoreceptors in the optic disk, therefore there is no image detection in this area. The blind spot of the right eye is located to the right of the center of vision and vice versa in the left eye.
   n) **Hyaloid Canal (or Cloquet's/Stilling's Canal):** This is a small transparent canal running through the vitreous body from the optical nerve disc to the lens. It is formed by pouch of the hyaloid membrane, which encloses the vitreous body. It is filled with lymph.

# Common Pathologies

**Cataract**

Cataracts (Figure 7.b) are an eye disorder in which clouding of the lens occurs, which leads to blurry vision. It is an aging disorder. This disorder leads to dimness in eye vision, and if not treated can lead to blindness.

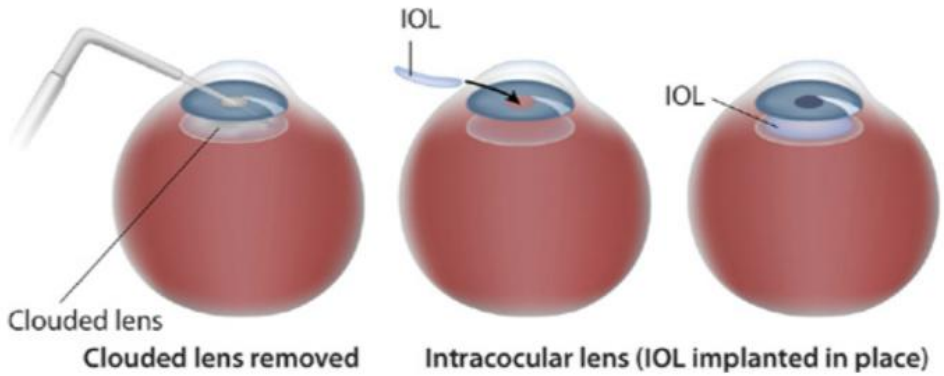

**Figure 7.b Cataract and Surgery to Remove the Cataract**

**Glaucoma (Figure 7.c)**

In this disease, damage occurs to optic nerves due to increased intraocular pressure and leads to blindness.

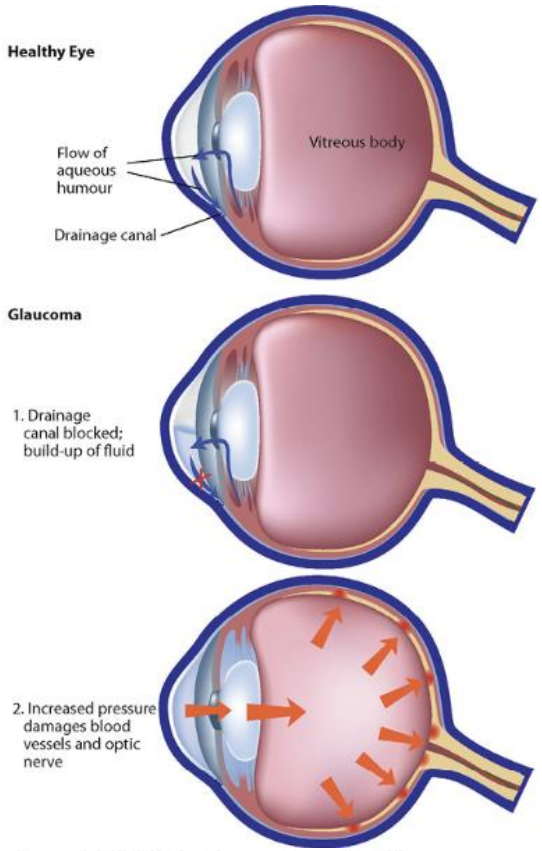

**Figure 7.c Healthy Eye vs. Eye with Glaucoma**

**Strabismus (Figure 7.d)**

A condition of the eye in which there is nonalignment between both eyes. This condition is commonly called squint.

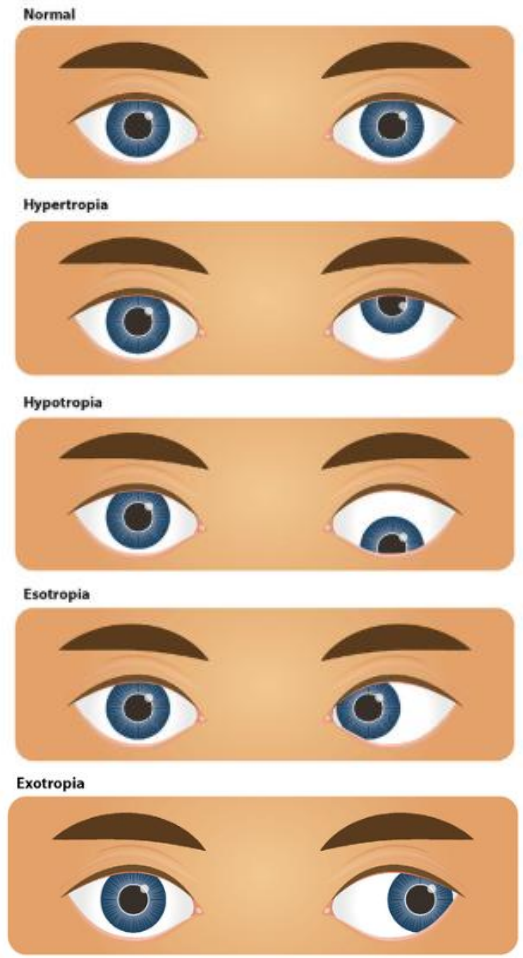

**Figure 7.d Types of Strabismus**

**Figure 7.d Types of Strabismus**

**Macular Degeneration**
This condition occurs because of degeneration in the macula of the eye due to aging and leads to blurry vision. It is a disease that destroys sharp, central vision. Central vision is required to see objects clearly and to do tasks such as reading and driving.

**Conjunctivitis**
An infection in the eye. The conjunctiva in the eye gets exposed to bacteria and other allergic irritants, which can lead to inflammation and infection. It is also known as pinkeye.

**Optic Neuritis**
This disorder occurs due to inflammation of the optic nerve. Pain and temporary vision loss are common.

Visual impairment category 9 NOS

**H54.8 Legal blindness, as defined in USA**

Blindness NOS according to USA definition

EXCLUDES *legal blindness with specification of impairment level (H54.0-H54.7)*

NOTES The table below gives a classification of severity of visual impairment recommended by a WHO Study Group on the Prevention of Blindness, Geneva, 6-10 November 1972.

The term 'low vision' in category H54 comprises categories 1 and 2 of the table, the term 'blindness' categories 3, 4 and 5, and the term 'unqualified visual loss' category 9.

If the extent of the visual field is taken into account, patients with a field no greater than 10 but greater than 5 around central fixation should be placed in category 3 and patients with a field no greater than 5 around central fixation should be placed in category 4, even if the central acuity is not impaired.

(Document 508 compliance requires all cells in the following table to be filled.)

| Category of visual impairment | Visual acuity with best possible correction | |
|---|---|---|
| | Maximum less than: | Minimum equal to or better than: |
| 1 | 6/18 | 6/60 |
| | 3/10 (0.3) | 1/10 (0.1) |
| | 20/70 | 20/200 |
| 2 | 6/60 | 3/60 |
| | 1/10 (0.1) | 1/20 (0.5) |
| | 20/200 | 20/400 |
| 3 | 3/60 | 1/60 (finger counting at one meter) |
| | 1/20 (0.05) | 1/50 (0.02) |
| | 20/400 | 5/300 (20/1200) |
| 4 | 1/60 (finger counting at one meter) | Light perception |
| | 1/50 (0.02) | |
| | 5/300 | |
| 5 | No light perception | |
| 9 | Undetermined or unspecified | |

*CMS does not include 7th character options for some codes in category H54. The publisher added 7th character options for the benefit of the reader.

## Chapter-Specific Coding Guidelines

## Anatomy of the Ear

### Introduction

The external, inner and middle ear (Figure 8.a) contain the organs of hearing and balance. The external ear extends from outside of the head to the eardrum. The middle ear is the air-filled chamber and located medially to the eardrum. It contains the auditory ossicles (the malleus, incus, and stapes). The external and middle ears are primarily involved in the process of hearing. The inner ear comprises of fluid-filled chambers, which serve to maintain balance (or equilibrium) and hearing. The various organs of a typical human ear are listed below:

1. **The External Ear**
   a) Auricle (or Pinna)
   b) External Auditory (or Auricular) Canal (or Ear Canal/External Auditory Meatus/External Acoustic Meatus)
   c) Surface of Eardrum
2. **The Middle Ear**
   a) Malleus
   b) Incus
   c) Stapes
   d) Tympanic Membrane (or Eardrum)
   e) Auditory/Eustachian Tube (or Pharyngotympanic Tube)
3. **The Inner Ear**
   a) Cochlea
   b) Vestibule
   c) Semicircular Canals

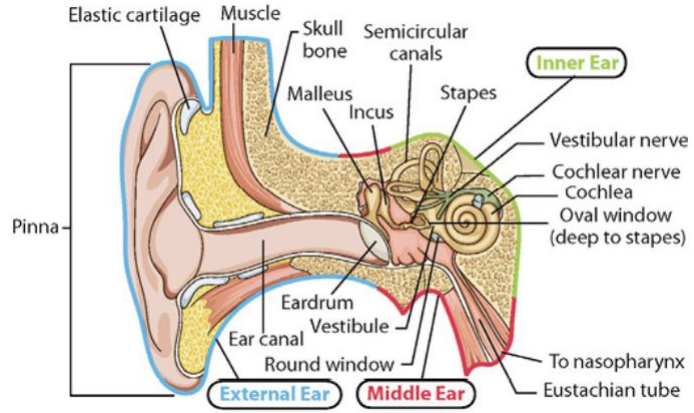

**Figure 8.a Anatomy of the Ear**

## Common Pathologies

**Swimmer's Ear**

Swimmer's ear is an inflammation, irritation, or infection of the outer ear and ear canal. The medical term for swimmer's ear is otitis externa. Acute external otitis is commonly a bacterial infection caused by streptococcus, staphylococcus, or pseudomonas types of bacteria.

**Otitis Media**

Otitis media is the medical term for middle ear infection. One symptom of acute otitis media is ear pain; other possible symptoms include fever and irritability (in infants) often with drainage of purulent material. After an acute infection, fluid (an effusion) may remain behind the ear drum (tympanic membrane) leading to otitis media with effusion chronic suppurative otitis media.

**Ménière's Disease**

Ménière's disease is a disorder of the inner ear that can affect hearing. It causes severe dizziness and a feeling of ear pressure or pain. It is characterized by episodes of vertigo, low-pitched tinnitus, and hearing loss. It usually affects just one ear. It may occur when the pressure of the fluid in part of the inner ear gets too high. The inner ear contains fluid-filled tubes called semicircular canals. These canals help to maintain position and balance.

**Vestibular Neuritis**

Vestibular neuritis is a disorder resulting from an acute infection of the nerves in the inner ear. This disrupts transmission of sensory information. Its main symptom is vertigo, which appears suddenly, often with nausea and vomiting. This can be made worse by head movement. Vertigo usually lasts for several days or weeks. In rare cases it can take months to go away entirely. Vestibular neuritis does not lead to loss of hearing.

**Cholesteatoma**

Cholesteatoma can be congenital, but it more commonly occurs as a complication of chronic ear infection. An abnormal skin growth in the middle ear behind the eardrum is called cholesteatoma. Poor function in the eustachian tube leads to negative pressure in the middle ear. Over time, the cholesteatoma can increase in size and destroy the surrounding delicate bones of the middle ear leading to hearing loss.

**Otosclerosis**

Otosclerosis is an abnormal bone growth in the middle ear that causes hearing loss. This bone prevents structures within the ear from working properly and causes hearing loss. It is a condition that mainly affects the stapes, one of the tiny bony ossicles in the middle ear. It significantly involves the bone that surrounds the inner ear, called the otic capsule, and a sensory-type hearing loss occurs.

**Acoustic Neuroma**

An acoustic neuroma (Figure 8.b) is a benign tumor of the nerve that connects the ear to the brain. This nerve is called the vestibular cochlear nerve. It is also called vestibular schwannoma. The cause is generally unknown. If an acoustic tumor becomes large it will push on the surface of the brainstem but not really grow into brain tissue. Symptoms of acoustic neuroma are loss of hearing on one side, ringing in ears, dizziness and balance problems.

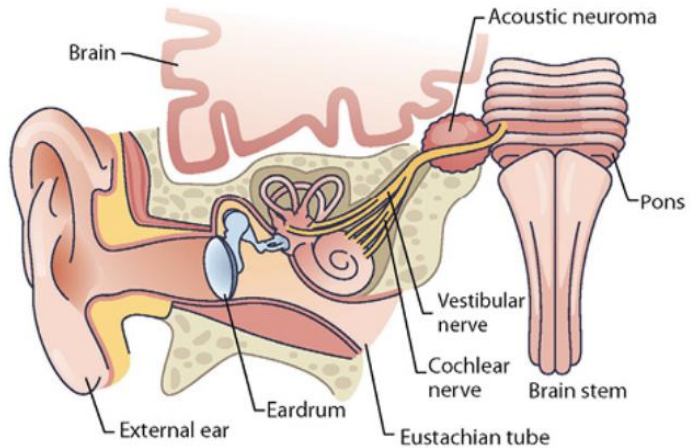

**Figure 8.b Acoustic Neuroma**

## Diseases of the ear and mastoid process (H60-H95)

**NOTES** Use an external cause code following the code for the ear condition, if applicable, to identify the cause of the ear condition

Excludes *certain conditions originating in the perinatal period (P04-P96)*

## Diseases of Inner ear (H80-H83)

4th H80 Otosclerosis

**DEFINITION:** Otosclerosis is abnormal bone growth around the ossicles (bones) of the inner ear, which disrupts hearing.

*INCLUDES* *Otospongiosis*

5th H80.0 **Otosclerosis involving oval window, nonobliterative**

- H80.00 **Otosclerosis involving oval window, nonobliterative, unspecified ear**
- H80.01 **Otosclerosis involving oval window, nonobliterative, right ear**
- H80.02 **Otosclerosis involving oval window, nonobliterative, left ear**
- H80.03 **Otosclerosis involving oval window, nonobliterative, bilateral**

5th H80.1 **Otosclerosis involving oval window, obliterative**

- H80.10 **Otosclerosis involving oval window, obliterative, unspecified ear**
- H80.11 **Otosclerosis involving oval window, obliterative, right ear**
- H80.12 **Otosclerosis involving oval window, obliterative, left ear**
- H80.13 **Otosclerosis involving oval window, obliterative, bilateral**

5th H80.2 **Cochlear otosclerosis**

Otosclerosis involving otic capsule

Otosclerosis involving round window

- H80.20 **Cochlear otosclerosis, unspecified ear**
- H80.21 **Cochlear otosclerosis, right ear**
- H80.22 **Cochlear otosclerosis, left ear**
- H80.23 **Cochlear otosclerosis, bilateral**

# Chapter 9: Diseases of the Circulatory System (I00-I99)

## Chapter-Specific Coding Guidelines

**I.C.9. Chapter 9: Diseases of the Circulatory System (I00-I99)**

**a. Hypertension**

The classification presumes a causal relationship between hypertension and heart involvement and between hypertension and kidney involvement, as the two conditions are linked by the term "with" in the Alphabetic Index. These conditions should be coded as related even in the absence of provider documentation explicitly linking them, unless the documentation clearly states the conditions are unrelated.

For hypertension and conditions not specifically linked by relational terms such as "with," "associated with" or "due to" in the classification, provider documentation must link the conditions in order to code them as related.

**1) Hypertension with Heart Disease**

Hypertension with heart conditions **classified to I50.-, Heart failure, I51.4, Myocarditis, unspecified, I51.89, Other ill-defined heart diseases, and I51.9, Heart disease, unspecified, is assigned to a code from category I11, Hypertensive heart disease. Use additional code(s) from category I50, Heart failure, or I51, Complications and ill-defined descriptions of heart disease, to identify the heart condition.**

**Hypertension with heart conditions classified to I51.5, Myocardial degeneration, or I51.7, Cardiomegaly, is assigned to a code from category I11, Hypertensive heart disease. No additional code is assigned to identify the specific heart condition.**

The same heart conditions (I50.-, I51.4-I51.7, I51.89, I51.9) with hypertension are coded separately if the provider has documented they are unrelated to the hypertension. **The applicable hypertension code I10, Essential (primary) hypertension, or a code from category I15, Secondary hypertension, should be assigned.** Sequence according to the circumstances of the admission/encounter.

**2) Hypertensive Chronic Kidney Disease**

Assign codes from category I12, Hypertensive chronic kidney disease, when both hypertension and a condition classifiable to category N18, Chronic kidney disease (CKD), are present. CKD should not be coded as hypertensive if the provider indicates the CKD is not related to the hypertension.

The appropriate code from category N18 should be used as a secondary code with a code from category I12 to identify the stage of chronic kidney disease.

*See Section I.C.14. Chronic kidney disease.*

If a patient has hypertensive chronic kidney disease and acute renal failure, the acute renal failure should also be coded. Sequence according to the circumstances of the admission/encounter.

**3) Hypertensive Heart and Chronic Kidney Disease**

The codes in category I13, Hypertensive heart and chronic kidney disease, are combination codes that include hypertension, heart disease and chronic kidney disease. Assign codes from combination category I13, Hypertensive heart and chronic kidney disease, when there is hypertension with both heart and **chronic kidney disease**. If heart failure is present, assign an additional code from category I50 to identify the type of heart failure.

The appropriate code from category N18, Chronic kidney disease, should be used as a secondary code with a code from category I13 to identify the stage of chronic kidney disease.

*See Section I.C.14. Chronic kidney disease.*

The Includes note at I13 specifies that the conditions included at I11 and I12 are included together in I13. If a patient has hypertension, heart disease and chronic kidney disease, then a code from I13 should be used, not codes from I11 or I12.

For patients with both acute renal failure and chronic kidney disease, the acute renal failure should also be coded. Sequence according to the circumstances of the admission/encounter.

4) **Hypertensive Cerebrovascular Disease**
For hypertensive cerebrovascular disease, first assign the appropriate code from categories I60-I69, followed by the appropriate hypertension code.

5) **Hypertensive Retinopathy**
Subcategory H35.0, Background retinopathy and retinal vascular changes, should be used along with a code from categories I10 – I15, in the Hypertensive diseases section, to include the systemic hypertension. The sequencing is based on the reason for the encounter.

6) **Hypertension, Secondary**
Secondary hypertension is due to an underlying condition. Two codes are required: one to identify the underlying etiology and one from category I15 to identify the hypertension. Sequencing of codes is determined by the reason for admission/encounter.

7) **Hypertension, Transient**
Assign code R03.0, Elevated blood pressure reading without diagnosis of hypertension, unless patient has an established diagnosis of hypertension. Assign code O13.-, Gestational [pregnancy-induced] hypertension without significant proteinuria, or O14.-, Pre-eclampsia, for transient hypertension of pregnancy.

8) **Hypertension, Controlled**
This diagnostic statement usually refers to an existing state of hypertension under control by therapy. Assign the appropriate code from categories I10-I15, Hypertensive diseases.

9) **Hypertension, Uncontrolled**
Uncontrolled hypertension may refer to untreated hypertension or hypertension not responding to current therapeutic regimen. In either case, assign the appropriate code from categories I10- I15, Hypertensive diseases.

10) **Hypertensive Crisis**
Assign a code from category I16, Hypertensive crisis, for documented hypertensive urgency, hypertensive emergency or unspecified hypertensive crisis. Code also any identified hypertensive disease (I10-I15). The sequencing is based on the reason for the encounter.

11) **Pulmonary Hypertension**
Pulmonary hypertension is classified to category I27, Other pulmonary heart diseases. For secondary pulmonary hypertension (I27.1, I27.2-), code also any associated conditions or adverse effects of drugs or toxins. The sequencing is based on the reason for the encounter, except for adverse effects of drugs (See Section I.C.19.e.).

12) **Hypertension, Resistant**
Resistant hypertension refers to blood pressure of a patient with hypertension that remains above goal in spite of the use of antihypertensive medications. Assign code I1A.0, Resistant hypertension, as an additional code when apparent treatment resistant hypertension, treatment resistant hypertension, or true resistant hypertension is documented by the provider. A code for the specific type of existing hypertension is sequenced first, if known.

**b. Atherosclerotic Coronary Artery Disease and Angina**

ICD-10-CM has combination codes for atherosclerotic heart disease with angina pectoris. The subcategories for these codes are I25.11, Atherosclerotic heart disease of native coronary artery with angina pectoris and I25.7, Atherosclerosis of coronary artery bypass graft(s) and coronary artery of transplanted heart with angina pectoris.

When using one of these combination codes it is not necessary to use an additional code for angina pectoris. A causal relationship can be assumed in a patient with both atherosclerosis and angina pectoris, unless the documentation indicates the angina is due to something other than the atherosclerosis.

If a patient with coronary artery disease is admitted due to an acute myocardial infarction (AMI), the AMI should be sequenced before the coronary artery disease.

*See Section I.C.9. Acute myocardial infarction (AMI).*

**c. Intraoperative and Postprocedural Cerebrovascular Accident**

Medical record documentation should clearly specify the cause- and- effect relationship between the medical intervention and the cerebrovascular accident in order to assign a code for intraoperative or postprocedural cerebrovascular accident.

Proper code assignment depends on whether it was an infarction or hemorrhage and whether it occurred intraoperatively or postoperatively. If it was a cerebral hemorrhage, code assignment depends on the type of procedure performed.

**d. Sequelae of Cerebrovascular Disease**

**1) Category I69, Sequelae of Cerebrovascular disease**

Category I69 is used to indicate conditions classifiable to categories I60-I67 as the causes of sequela (neurologic deficits), themselves classified elsewhere. These "late effects" include neurologic deficits that persist after initial onset of conditions classifiable to categories I60-I67. The neurologic deficits caused by cerebrovascular disease may be present from the onset or may arise at any time after the onset of the condition classifiable to categories I60-I67.

Codes from category I69, Sequelae of cerebrovascular disease, that specify hemiplegia, hemiparesis and monoplegia identify whether the dominant or nondominant side is affected. Should the affected side be documented, but not specified as dominant or nondominant, and the classification system does not indicate a default, code selection is as follows:

- For ambidextrous patients, the default should be dominant.
- If the left side is affected, the default is non-dominant.
- If the right side is affected, the default is dominant.

**2) Codes from category I69 with codes from I60-I67**

Codes from category I69 may be assigned on a health care record with codes from I60-I67, if the patient has a current cerebrovascular disease and deficits from an old cerebrovascular disease.

**3) Codes from category I69 and Personal history of transient ischemic attack (TIA) and cerebral infarction (Z86.73)**

Codes from category I69 should not be assigned if the patient does not have neurologic deficits.

*See Section I.C.21.4. History (of) for use of personal history codes*

**e. Acute myocardial infarction (AMI)**

**1) Type 1 ST elevation myocardial infarction (STEMI) and non-ST elevation myocardial infarction (NSTEMI)**

The ICD-10-CM codes for type 1 acute myocardial infarction (AMI) identify the site, such as anterolateral wall or true posterior wall. Subcategories I21.0-I21.2 and code I21.3 are used for type 1 ST elevation myocardial infarction (STEMI). Code I21.4, Non-ST elevation (NSTEMI) myocardial infarction, is used for type 1 non-ST elevation myocardial infarction (NSTEMI) and nontransmural MIs.

If a type 1 NSTEMI evolves to STEMI, assign the STEMI code. If a type 1 STEMI converts to NSTEMI due to thrombolytic therapy, it is still coded as STEMI.

For encounters occurring while the myocardial infarction is equal to, or less than, four weeks old, including transfers to another acute setting or a postacute setting, and the myocardial infarction meets the definition for "other diagnoses" (see Section III, Reporting Additional Diagnoses), codes from category I21 may continue to be reported. For encounters after the 4 week time frame and the patient is still receiving care related to the myocardial infarction, the appropriate aftercare code should be assigned, rather than a code from category I21. For old or healed myocardial infarctions not requiring further care, code I25.2, Old myocardial infarction, may be assigned.

**2) Acute myocardial infarction, unspecified**

Code I21.9, Acute myocardial infarction, unspecified, is the default for unspecified acute myocardial infarction or unspecified type. If only type 1 STEMI or transmural MI without the site is documented, assign code I21.3, ST elevation (STEMI) myocardial infarction of unspecified site.

**3) AMI documented as nontransmural or subendocardial but site provided**

If an AMI is documented as nontransmural or subendocardial, but the site is provided, it is still coded as a subendocardial AMI.

*See Section I.C.21.3. for information on coding status post administration of tPA in a different facility within the last 24 hours.*

**4) Subsequent acute myocardial infarction**

A code from category I22, Subsequent ST elevation (STEMI) and non-ST elevation (NSTEMI) myocardial infarction, is to be used when a patient who has suffered a type 1 or unspecified AMI has a new AMI within the 4 week time frame of the initial AMI. A code from category I22 must be used in conjunction with a code from category I21. The sequencing of the I22 and I21 codes depends on the circumstances of the encounter.

Do not assign code I22 for subsequent myocardial infarctions other than type 1 or unspecified. For subsequent type 2 AMI assign only code I21.A1. For subsequent type 4 or type 5 AMI, assign only code I21.A9.

If a subsequent myocardial infarction of one type occurs within 4 weeks of a myocardial infarction of a different type, assign the appropriate codes from category I21 to identify each type. Do not assign a code from I22. Codes from category I22 should only be assigned if both the initial and subsequent myocardial infarctions are type 1 or unspecified.

5) **Other Types of Myocardial Infarction**

The ICD-10-CM provides codes for different types of myocardial infarction. Type 1 myocardial infarctions are assigned to codes I21.0-I21.4.

Type 2 myocardial infarction (myocardial infarction due to demand ischemia or secondary to ischemic imbalance) is assigned to code I21.A1, Myocardial infarction type 2 with the underlying cause coded first, if applicable. Do not assign code I24.8**9**, Other forms of acute ischemic heart disease, for the demand ischemia.

If a type 2 AMI is described as NSTEMI or STEMI, only assign code I21.A1. Codes I21.01-I21.4 should only be assigned for type 1 AMIs.

Acute myocardial infarctions type 3, 4a, 4b, 4c and 5 are assigned to code I21.A9, Other myocardial infarction type.

The "Code also" and "Code first" notes should be followed related to complications, and for coding of postprocedural myocardial infarctions during or following cardiac surgery.

6) **Myocardial Infarction with Coronary Microvascular Dysfunction**

Coronary microvascular dysfunction (CMD) is a condition that impacts the microvasculature by restricting microvascular flow and increasing microvascular resistance. Code I21.B, Myocardial infarction with coronary microvascular dysfunction, is assigned for myocardial infarction with coronary microvascular disease, myocardial infarction with coronary microvascular dysfunction, and myocardial infarction with non-obstructive coronary arteries (MINOCA) with microvascular disease.

# Anatomy of the Cardiovascular System

## Introduction

The human vascular system comprises a series of tubes (which are known as vessels) that travel in almost all parts of the human body. It is categorized into the blood vascular system and the lymphatic vascular system.

### 1. Blood Vascular System

The blood vascular system (Figure 9.a) includes the heart and blood vessels required to facilitate the circulation of the colored fluid (blood) inside the body.

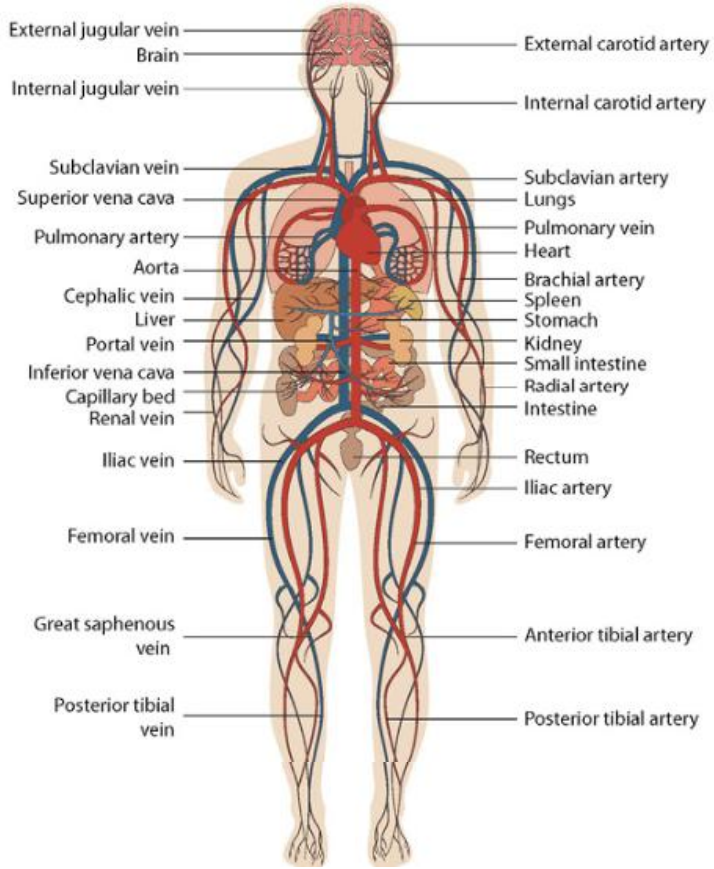

**Figure 9.a Blood Vascular System - Arteries and Veins**

a) **The Structure of Arteries**

The arteries possess stronger and thicker walls than the corresponding veins and are based on the following components:

i) Tunica Intima
ii) Tunica Media
iii) Tunica Externa

b) **The Structure of Veins**

The veins have a similar structure as that of the arteries. The components of a typical vein are described below:

i) Tunica Intima
ii) Tunica Media
iii) Tunica Externa

c) **The Blood**

The blood is considered a uniquely specialized connective tissue that is composed of the formed elements (or the blood cells) and the fluid portion (or plasma). The formed elements of blood are based on the red blood cells (RBCs or erythrocytes), the white blood cells (WBCs or leukocytes) and the platelets (or thrombocytes). The blood contributes to about 8% of total body weight. The quantity of blood in an average human varies between 5 to 6 liters. The elements of blood are categorized as follows:

d) **Erythrocytes or Red Blood Cells**

The red blood cells are the most common type of blood cells that contribute to about 95% of the blood cell volume.

e) **Leukocytes or White Blood Cells**

The white blood cells can be divided into the following subcategories:

f) **Granular Leukocytes:**

The granular leukocytes contain granules in their cytoplasm and can be further classified into the following three types:

i) neutrophils constitute about 60% to 70% of the white blood cells.
ii) eosinophils constitute about 2% to 4% of the white blood cells.
iii) basophils constitute about 0.5% to 1% of the white blood cells.

g) **Agranular Leukocytes**

The agranular leukocytes do not contain granules in their cytoplasm and can be further classified into the following two types:

i) monocytes constitute about 3% to 8% of the white blood cells.
ii) lymphocytes constitute about 20% to 25% of the white blood cells.

h) **Thrombocytes or Platelets**

The platelets are small cell fragments that do not contain nucleus in their cytoplasm.

i) **Blood Plasma**

The plasma is the fluid component of blood in which the blood cells usually remain suspended. The blood plasma is composed of 91% water, 7% proteins, and 2% solutes.

**2. Lymph Vascular System**

The lymph vascular system includes the lymph glands and lymphatic vessels for circulating the colorless fluid (lymph) throughout the human body. Both of the blood vascular and the lymph vascular systems work in close association with each other for sustaining the human life cycle.

**3. The Thoracic Cavity**

The thoracic cavity is enclosed by the thoracic wall and primarily contains the structures of the cardiovascular and respiratory systems.

a) **The Pericardium**

The heart and the roots of the great vessels are contained within the conical and fibro-serous sac, which is known as the pericardium. It is composed of two closely connected sacs, which are known as the fibrous pericardium (or the outer sac) and the serous pericardium (the inner sac).

b) **The Heart**

The heart is a hollow muscular organ that remains enclosed in the fibro-serous sac (or the pericardium) and is regarded as the central organ of the cardiovascular system. It lies between the lungs in the middle mediastinum and receives blood from the veins.

**4. The Chambers of the Heart**

The human heart is based on the following four chambers (Figure 9.b):

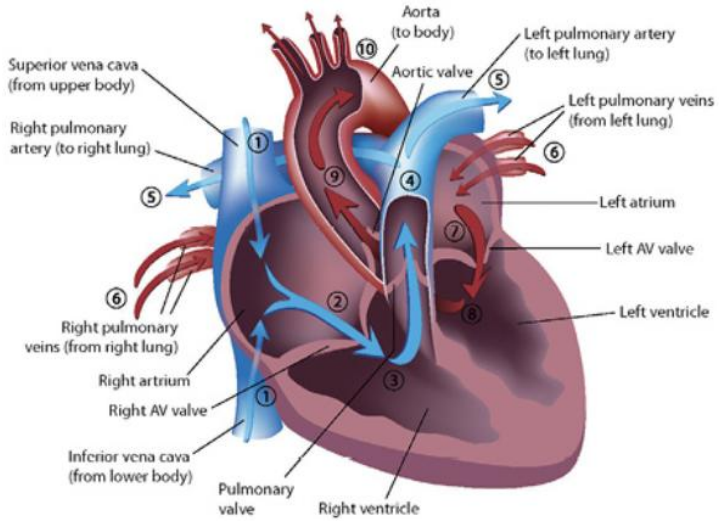

**Figure 9.b Chambers of the Heart**

a) **The Right Atrium:** The right border of the human heart is formed by the right atrium. The superior vena cava, inferior vena cava and coronary sinus provide venous blood supply to the right atrium of the heart.
The right atrium contains the following elements inside it:
   i) Sinus Venarum
   ii) Pectinate Muscles
   iii) Opening of Superior Vena Cava
   iv) Opening of Inferior Vena Cava
   v) Opening of Coronary Sinus
   vi) The Right Atrioventricular Orifice
   vii) Interatrial Septum

b) **The Right Ventricle:** The inferior border of the human heart is constituted by the right ventricle.

c) **The Left Atrium:** The left atrium chiefly constitutes the base of the heart and utilizes the mitral valve to pump the oxygenated blood received from the pulmonary veins into the left ventricle of the heart. The interior of the left atrium is based on the following components:
   i) Two superior and two inferior pulmonary veins that enter the posterior wall of the left atrium.
   ii) A posteriorly directed interatrial septum that separates the right atrium from the left atrium of the heart.
   iii) A smooth walled portion and a muscular auricle containing pectinate muscles.
   iv) A comparatively thicker wall than the corresponding right atrium.
   v) A left atrioventricular orifice that facilitates the discharge of oxygenated blood into the left ventricle.

d) **The Left Ventricle:** The left ventricle pumps the oxygenated blood (through the aortic valve) to the whole body through the aorta. The interior of the left ventricle is based on the following elements:
   i) a double-leaflet/dual-flap mitral (bicuspid or left atrioventricular) valve, which is located between the left atrium and ventricle for guarding the left atrioventricular orifice.
   ii) walls of the left ventricle, which are comparatively thicker than the corresponding right ventricle.
   iii) conical cavity of the left ventricle that is comparatively longer than the corresponding right ventricle.
   iv) anterior and posterior left ventricular papillary muscles that get attached to the cusps of the mitral valve through the tendinous cords (or the chordae tendineae).
   v) aortic vestibule, which is a smooth-walled, nonmuscular, superoanterior outflow portion of the left ventricle that lies inferior to the aortic orifice and possesses fibrous walls.
   vi) aortic orifice (or opening) is an opening of the left ventricle into the aorta. This valve is usually tricuspid (with three leaflets) and located posterior to the left side of the sternum at the level of the third intercostal space.
   vii) inner surface of the left ventricle gives rise to the irregular, rounded and thick muscular ridges that are termed as the trabeculae carneae.

5. **The Cardiac Cycle**

The cardiac cycle is based on the synchronous pumping of the right and left chambers of the heart.

a) **The Arterial Supply of the Heart:** The heart is supplied by the following arteries:
   i) right coronary artery (RCA)
   ii) sino-atrial nodal artery
   iii) right marginal artery
   iv) posterior interventricular artery
   v) atrioventricular nodal artery
   vi) left coronary artery
   vii) anterior interventricular artery (or Left Anterior Descending Artery)
   viii) circumflex artery
   ix) left marginal artery
   x) posterior interventricular artery

b) **The Arteries:** The major types of arteries are:
   i) pulmonary arteries- pulmonary arteries carry the oxygen deficient blood from the heart to the lungs for attaining oxygen.
   ii) systemic arteries- systemic arteries transport the oxygenated blood to the rest of the body.

c) **The Aorta:** The aorta is divided into the following components:
   i) ascending aorta
   ii) arch of aorta
   iii) descending aorta

d) **The Thoracic Aorta**
   i) aortic intercostal arteries (nine pairs)
   ii) left bronchial arteries (two in number)
   iii) posterior mediastinal arteries
   iv) pericardial arteries
   v) superior phrenic arteries

e) **The Abdominal Aorta**

6. **The Arteries of the Head and Neck**

The major arteries that supply blood to the head and neck regions are the two common carotid arteries. These arteries travel through the neck and each one of them gets divided into the following branches:

a) **External Carotid Arteries**
b) **Ascending Pharyngeal Artery**
c) **Occipital Artery**
   i) muscular branches
   ii) sternocleidomastoid branch/sternocleidomastoid artery
   iii) auricular branch
   iv) meningeal or dural branch
   v) descending branch

d) **Posterior Auricular Artery**
   i) stylomastoid branch/stylomastoid artery
   ii) auricular branch
   iii) occipital branch

e) **Superior Thyroid Artery**
   i) hyoid branch
   ii) sternocleidomastoid branch/sternocleidomastoid artery
   iii) superior laryngeal branch/superior laryngeal artery
   iv) cricothyroid branch

f) **Lingual Artery**
   i) hyoid branch
   ii) dorsal lingual branches
   iii) sublingual branch/sublingual artery
   iv) deep lingual branch/deep lingual artery

g) **Facial (or External Maxillary) Artery**

| Cervical Branches | Facial Branches |
|---|---|
| i) ascending palatine artery | i) inferior labial artery |
| ii) tonsillar branch | ii) superior labial artery |
| iii) glandular branches | iii) lateral nasal branch |
| iv) submental artery | iv) angular artery |
| v) muscular branches | v) muscular branches |

**7. The Internal Carotid Arteries**

The internal carotid arteries are the direct continuation of the common carotid arteries. However, the other portions of these arteries extend into the following arterial branches:

a) **The petrous portion of the internal carotid arteries gives rise to the following branches:**
   i) caroticotympanic artery
   ii) artery of the pterygoid canal (or vidian artery)

b) **The cavernous portion of the internal carotid arteries gives rise to the following branches:**
   i) cavernous artery
   ii) hypophyseal artery
   iii) semilunar arterial branches
   iv) anterior meningeal artery
   v) ophthalmic artery

c) **Anterior Cerebral Artery**
   i) anteromedial ganglionic branches
   ii) inferior branches
   iii) ascending frontal branch
   iv) ascending parietal branch
   v) parietotemporal branch
   vi) temporal branches

e) **Posterior Communicating Artery**

f) **Anterior Choroidal Artery (or Choroid Artery)**

**8. The Arteries of the Upper Extremity**

The Subclavian Artery divides into the following branches:

a) **Vertebral Artery**

The vertebral artery is divided into the following branches:

| Cervical Branches | Cranial Branches |
|---|---|
| i) spinal branches | i) posterior meningeal branch |
| ii) muscular branches | ii) posterior/dorsal spinal artery |
| | iii) anterior/ventral spinal artery |
| | iv) posterior inferior cerebellar artery |
| | v) medullary arteries |

b) **Internal Thoracic (or Internal Mammary) Artery**
- i) pericardiacophrenic artery
- ii) anterior mediastinal arteries
- iii) pericardial branches
- iv) sternal branches
- v) anterior intercostal arteries
- vi) perforating branches
- vii) musculophrenic artery
- viii) superior epigastric artery

c) **Thyrocervical Trunk (or Thyroid Axis)**
- i) inferior thyroid artery
- ii) inferior laryngeal artery
- iii) esophageal branches
- iv) tracheal artery
- v) ascending cervical artery
- vi) muscular branches

d) **Suprascapular (or Transverse Scapular) Artery**
- i) suprasternal branch
- ii) acromial branch

e) **Transverse Cervical Artery (or Transverse Artery of Neck)**
- i) ascending branch
- ii) descending branch

f) **The costocervical trunk is the highest intercostal artery (superior intercostal), and it includes:**
   i) first posterior intercostal artery
   ii) second posterior intercostal artery
   iii) deep cervical artery
   iv) third arterial part

g) **Axillary Artery**
   i) first part
   ii) second part
   iii) third part

h) **Brachial Artery**
   i) muscular branches
   ii) human nutrient artery
   iii) profunda brachii artery (deep artery of the arm/superior profunda artery)
   iv) superior ulnar collateral artery (or inferior profunda artery)
   v) inferior ulnar collateral artery (or anastomotica magna artery)

i) **Radial Artery**

| Branches of the Radial Artery in Forearm | Branches of the Radial Artery in Wrist | Branches of the Radial Artery in Hand |
|---|---|---|
| The Radial Recurrent Artery | The Posterior Radial Carpal Artery (The Dorsal Carpal Branch) | The Princeps Pollicis Artery |
| The Muscular (Arterial) Branches | The First Dorsal Metacarpal Artery | The Radialis Indicis Artery |
| The Anterior Radial Carpal Artery (The Volar Carpal Branch) | | The Deep Palmar/Volar Arch |
| The Superficial Volar Artery (The Superficial Palmar Branch of Radial Artery) | | The Palmar Interosseous (or Volar Metacarpal) Arteries |
| | | The Perforating (Arterial) Branches |
| | | The Recurrent (Arterial) Branches |

j) **Ulnar Artery**

The ulnar artery originates from the brachial artery and runs along the medial aspect (or ulnar side) of the forearm. A tabular representation of the arterial branches of ulnar artery is provided below:

| Branches of the Ulnar Artery in Forearm | Branches of the Ulnar Artery in Wrist | Branches of the Ulnar Artery in Hand |
|---|---|---|
| The Anterior Ulnar Recurrent Artery | The Volar Carpal Branch (or Anterior Ulnar Carpal Artery) | The Deep Volar Branch (or Profunda Branch) |
| The Posterior Ulnar Recurrent Artery | The Dorsal Carpal Branch (or Posterior Ulnar Carpal Artery) | The Superficial Volar Arch (or Superficial Palmar Arch) |
| The Common Interosseous Artery (divides into the following two branches)<br>i) The Volar Interosseous Artery (or Anterior Interosseous Artery)<br>ii) The Dorsal Interosseous Artery (or Posterior Interosseous Artery) | | |
| The Muscular (Arterial) Branches | | |

**9. Arteries of the Trunk**

Arteries of the trunk are based on the following arteries:

a) **The Descending Aorta**
   i) thoracic aorta
   ii) abdominal aorta

b) **The Common Iliac Arteries**

c) **Internal Iliac (or Hypogastric) Artery**

| The Anterior Trunk | The Posterior Trunk |

| The Inferior Gluteal Artery (Sciatic Artery)-with the following branches:<br>The Muscular (Arterial) Branches<br>The Coccygeal (Arterial) Branches<br>The Arteria Comitans Nervi Ischiadici<br>The Anastomotic (Arterial) Branch<br>The Articular (Arterial) Branch<br>The Cutaneous (Arterial) Branches | |

d) **The External Iliac Artery divides into the inferior epigastric artery, which includes:**
   i) muscular branches
   ii) cutaneous branches
   iii) external spermatic branch (in males) and artery of round ligament of uterus (in females)
   iv) pubic branch

e) **Deep Iliac Circumflex Artery**
   i) muscular branch
   ii) cutaneous branch

**10. The Arteries of the Lower Extremity**

a) **Femoral Artery**

The branches of the femoral artery are presented below in a tabular format:

| **The Branches of the Femoral Artery** | | |
|---|---|---|
| The Superficial Epigastric Artery | | |
| The Superficial Iliac Circumflex Artery | | |
| The Superficial External Pudendal Artery (or Superficial External Pubic Artery) | | |
| The Deep External Pudendal Artery (or Deep External Pubic Artery) | | |

**11. The Veins**

The veins are the blood vessels that carry deoxygenated blood (Figure 9.c) from the body tissues towards the heart via capillaries. The veins can be categorized into the following classes:

a) **Pulmonary Veins**
The pulmonary veins carry oxygenated blood from the lungs to the left atrium of the heart. The pulmonary veins are of the following types:
i) right inferior pulmonary vein
ii) right superior pulmonary vein
iii) left inferior pulmonary vein
iv) left superior pulmonary vein

b) **Systemic Veins**
The systemic veins deliver deoxygenated blood from the body tissues to the right atrium of the human heart.

c) **Superficial (or Cutaneous) Veins**
The superficial veins are found immediately beneath the skin between the layers of the superficial fascia.

d) **Deep Veins**
The deep veins are located under the deep fascia with their corresponding arteries.

e) **Systemic Veins**
The systemic veins are divided into the following groups:
- i) veins of the heart
- ii) veins of the head and neck
- iii) veins of the upper extremity and thorax
- iv) veins of the lower extremity, abdomen, and pelvis

f) **Veins of the Heart**
- i) great cardiac vein
- ii) small cardiac vein
- iii) middle cardiac vein
- iv) posterior vein of the left ventricle
- v) oblique vein of the left atrium

g) **Veins of the Head and Neck**
- i) frontal vein (or supratrochlear vein)
- ii) supraorbital vein
- iii) angular vein
- iv) anterior facial vein (or facial vein)
- v) superficial temporal vein
- vi) parotid veins
- vii) articular veins (from temporomandibular joint)
- viii) anterior auricular veins
- ix) transverse facial veins
- x) internal maxillary vein
- xi) posterior facial vein (or temporomaxillary vein)
- xii) posterior auricular vein
- xiii) occipital vein

h) **Veins of the Neck**
- i) external jugular vein
- ii) posterior external jugular vein
- iii) anterior jugular vein
- iv) internal jugular vein
- v) vertebral vein
- vi) diploic veins
  - (a) frontal diploic vein
  - (b) anterior temporal diploic vein
  - (c) posterior temporal diploic vein
  - (d) occipital diploic vein

12. **Veins of the Brain**
    a) **External Cerebral Veins**
        i) superior cerebral veins
        ii) middle cerebral vein (or superficial sylvian vein)
        iii) inferior cerebral veins
    b) **Internal Cerebral Veins (or Deep Cerebral Veins)**
    c) **Terminal Vein**
    d) **Great Cerebral Veins (or Great Vein of Galen)**
    e) **Cerebellar Veins**
        i) superior cerebellar veins
        ii) inferior cerebellar veins
    f) **Ophthalmic and Emissary Veins**
        i) Ophthalmic veins are the veins that serve to perform the venous drainage of the orbit and pass through the superior orbital fissure to enter into the cavernous sinus.
        ii) superior ophthalmic veins
        iii) inferior ophthalmic veins
        iv) Emissary veins are those valveless veins that connect the dural venous sinuses with veins outside the cranium.
    g) **Sinuses of the Dura Mater**
        i) posterosuperior sinuses
        ii) superior sagittal sinus (or superior longitudinal sinus)
        iii) inferior sagittal sinus (or inferior sagittal sinus)
        iv) straight sinus (or tentorial sinus)
        v) transverse sinuses (or lateral sinuses)
    h) **Occipital Sinuses**
        i) anteroinferior sinuses
        ii) cavernous sinuses
        iii) intercavernous sinuses
        iv) superior petrosal sinuses
        v) inferior petrosal sinuses
        vi) basilar plexus (or transverse/basilar sinus)

## 13. Veins of the Upper Extremity, Thorax and Vertebral Column

The veins of the upper extremity are divided into the superficial and the deep veins.

a) **Superficial Veins of the Upper Extremity**
   i) cephalic vein (or antecubital vein)
   ii) accessory cephalic vein
   iii) median cubital vein (or median basilic vein/antecubital vein)
   iv) basilic vein
   v) median antebrachial vein
   vi) dorsal venous network of the hand
   vii) intercapitular veins
   viii) dorsal metacarpal veins
   ix) dorsal digital veins

b) **Deep Veins of the Upper Extremity**
   i) radial veins
   ii) ulnar veins
   iii) brachial veins
   iv) axillary veins
   v) subclavian veins
   vi) deep palmar venous arch

c) **Veins of the Thorax**
   i) innominate veins (or brachiocephalic veins)
   ii) internal mammary veins (or internal thoracic veins)
   iii) inferior thyroid veins
   iv) highest intercostal vein (or superior intercostal vein)
   v) right superior intercostal vein
   vi) left superior intercostal vein
   vii) superior vena cava
   viii) azygos vein
   ix) hemiazygos vein
   x) accessory hemiazygos vein (or vena azygos minor superior)
   xi) bronchial veins

d) **Veins of the Vertebral Column**
   i) external vertebral venous plexuses (or extraspinal veins)
   ii) anterior external vertebral plexuses
   iii) posterior external vertebral plexuses
   iv) internal vertebral venous plexus (or intraspinal veins)
   v) basivertebral veins
   vi) intervertebral veins
   vii) veins of the medulla spinalis (or veins of spinal cord)

**14. Veins of the Lower Extremity, Abdomen, and Pelvis**

The veins of the lower extremity are arranged into the following groups:

a) **Superficial Veins of the Lower Extremity**
   i) great saphenous vein
   ii) small saphenous vein (or lesser saphenous vein)

b) **Deep Veins of the Lower Extremity**
   i) posterior tibial veins
   ii) peroneal veins
   iii) tibioperoneal trunk
   iv) anterior tibial veins
   v) popliteal vein
   vi) femoral vein
   vii) deep femoral vein (or profunda femoris vein)
   viii) common femoral vein
   ix) external iliac vein

c) **Major Veins of Abdomen and Pelvis**
   i) ascending lumbar vein
   ii) left gastric vein
   iii) right gastric vein
   iv) left gastro-omental vein
   v) right gastro-omental vein
   vi) left hepatic vein
   vii) middle hepatic vein
   viii) right hepatic vein
   ix) superior mesenteric vein
   x) inferior phrenic veins
   xi) inferior vena cava
   xii) left renal vein
   xiii) right renal vein
   xiv) splenic vein
   xv) suprarenal veins
   xvi) deep dorsal vein of clitoris
   xvii) deep dorsal vein of penis
   xviii) external pudendal veins
   xix) internal pudendal vein
   xx) ovarian vein
   xxi) pampiniform venous plexus
   xxii) prostatic venous plexus
   xxiii) rectal venous plexus
   xxiv) uterine venous plexus
   xxv) vaginal venous plexus
   xxvi) common iliac veins
   xxvii) middle sacral veins
   xxviii) vesical venous plexus

**15. The Portal System of Veins**

The hepatic portal system of the veins is responsible for the portal circulation, which denotes the passage of blood from the gastrointestinal tract and spleen through the portal vein to the liver.
The tributaries and sub-tributaries of the portal vein are presented below:

| The Tributaries and Subtributaries of the Portal Vein | | |
|---|---|---|
| The Lienal Vein | | |
| The Tributaries of Lienal Vein | The Short Gastric Veins | |
| | The Left Gastroepiploic Vein | |
| | The Pancreatic Veins | |
| | The Inferior Mesenteric Vein | |
| | The Tributaries of Inferior Mesenteric Vein | The Sigmoid Veins |
| | | The Left Colic Vein |
| The Superior Mesenteric Vein | | |
| The Tributaries of Superior Mesenteric Vein | The Right Gastroepiploic Vein | |
| | The Pancreaticoduodenal Veins | |
| The Coronary Vein | | |
| The Pyloric Vein | | |
| The Cystic Vein | | |
| The Paraumbilical Veins | | |

## Common Pathologies

**Angina pectoris**
Commonly known as angina, angina pectoris chest pain is due to ischemia of the heart muscle, generally due to obstruction or spasm of the coronary arteries. The main cause of angina pectoris is coronary artery disease, due to atherosclerosis of the arteries feeding the heart.

**Cardiomyopathy**
Cardiomyopathy is a chronic disease of the heart muscle, in which the muscle is abnormally enlarged, thickened, and/or stiffened. The weakened heart muscle loses the ability to pump blood effectively, resulting in irregular heartbeats (arrhythmias) and possibly even heart failure.

**Rheumatic Heart Disease**
Rheumatic heart disease is a condition in which permanent damage to heart valves is caused by rheumatic fever. The heart valve is damaged by a disease process that generally begins with a strep throat caused by bacteria called Streptococcus, and may eventually cause rheumatic fever.

**Arrhythmia**
An arrhythmia is an abnormal rate or rhythm of the heartbeat. It can beat too fast, too slow, or with an irregular rhythm. If the heartbeat is fast it is called tachycardia and if is too slow, it is referred to as bradycardia.

**Congenital Heart Defects**
Congenital heart defects are abnormalities in the morphological or physiological functioning of the heart that are present at the time of birth. The primary cause is the incomplete or abnormal development of the fetal heart during the early weeks of pregnancy.

**Hypertension**
Hypertension or high blood pressure is a condition that exists when the force of blood pressing against the blood vessel walls is too high. Over time, hypertension can cause a myriad of complications within the body (Figure 9.d).

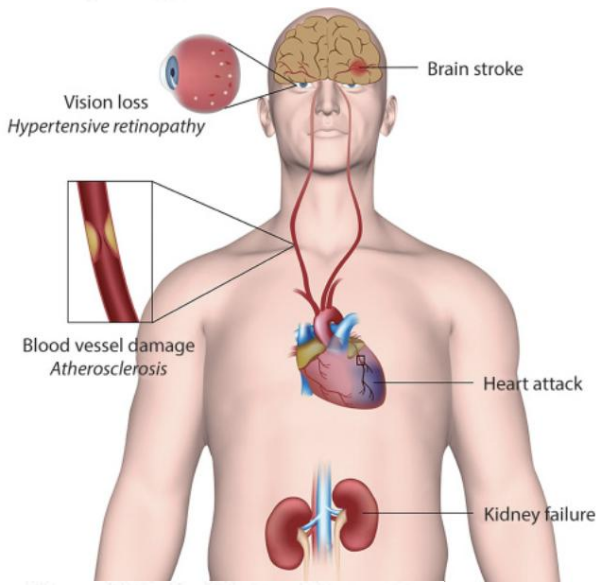

**Figure 9.d Main Complications of Hypertension**

**Aortic Aneurysm**
An aneurysm is an abnormal bulging or swelling of a portion of a blood vessel. The aorta, which can develop these abnormal bulges, is the large blood vessel that carries oxygen-rich blood away from the heart to the rest of the body.

**Atherosclerosis**
Atherosclerosis (Figure 9.e) is a disease of the arterial blood vessels (arteries), in which the walls of the blood vessels become thickened and hardened by "plaques." The plaques are composed of cholesterol and other lipids, inflammatory cells, and calcium deposits.

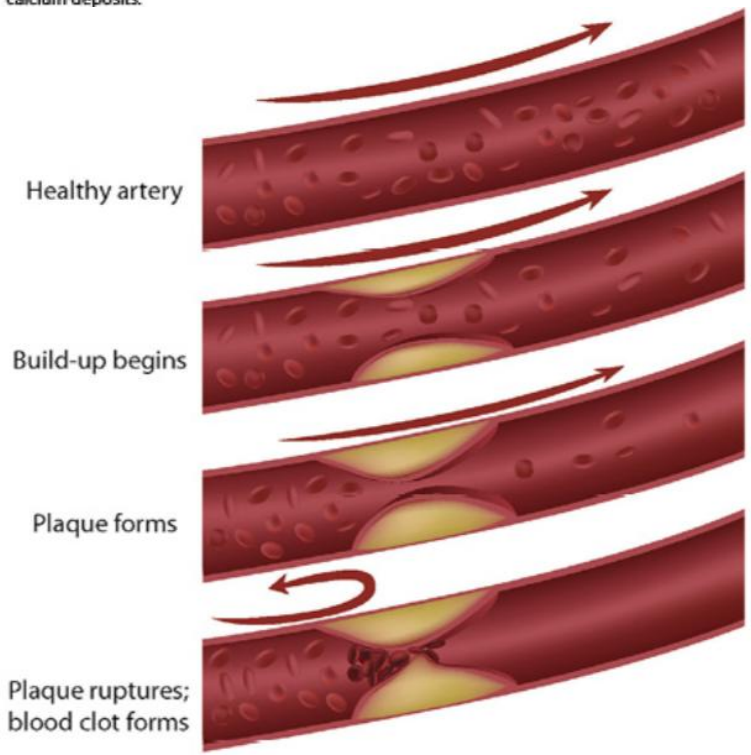

**Figure 9.e Healthy Artery and Artery with Atherosclerosis**

**Deep Vein Thrombosis**
Deep vein thrombosis (DVT) is a blood clot in a major vein that usually develops in the legs and/or pelvis.

**Coronary Artery Disease**
Coronary artery disease (CAD) is one of the common vascular diseases marked by accumulation of atherosclerotic plaque in the coronary blood vessels. As the plaque thickens, secondary changes may take place like enlargement of size and calcification that may lead to complete occlusion of the lumen of the coronary artery, resulting in inadequate supply of oxygen to the heart muscle.

**Peripheral Vascular Disease**
Peripheral vascular disease is a narrowing of blood vessels that restricts blood flow. It mostly occurs in the legs, but is sometimes seen in the arms.

**Hypercholesterolemia**
Hypercholesterolemia is the presence of high levels of cholesterol in the blood. It is a form of "hyperlipidemia" (elevated levels of lipids in the blood) and "hyperlipoproteinemia" (elevated levels of lipoproteins in the blood).

**Lymphedema**
A condition in which excess fluid collects in tissue and causes swelling. Lymphedema may occur in the arm or leg after lymph vessels or lymph nodes in the underarm or groin are removed.

**Hodgkin's Lymphoma**
This is a type of cancer of the lymphatic system. It can start almost anywhere in the body. It's believed to be caused by HIV, Epstein-Barr Syndrome, age, and family history.

**Non-Hodgkin's Lymphoma**
Non-Hodgkin's lymphoma is a cancer of the lymphoid system. It is divided into three types: high-grade, intermediate-grade and low-grade.

**Lymphangitis**
Lymphangitis is an inflammation of the lymphatics (lymph channels) due to an infection by a microbe or some chemical irritant. It occurs when an infection or inflammation occurs somewhere else and the microbe or the irritant is transported along with lymph fluid through the lymphatics.

**Splenomegaly**
Splenomegaly is a condition in which the spleen becomes enlarged, tender and painful. It can occur due to a number of reasons, ranging from certain infections to cancers.

# Anatomy of the Lymphatic System

## Introduction

The human lymphatic system (Figure 9.f) is closely linked with the blood and the vascular system. Both of these systems work in an intimate association with each other and transport vital fluids throughout the body via a system of vessels. The lymph capillaries and lymphatics are the special vessels that serve to transport a fluid (called lymph).

### 1. The Lymphatic System

The human lymphatic system consists of the following components:

a) The Lymph
b) The Lymph Vessels
c) The Lymph Nodes

The lymph nodes (or lymph glands) are oval structures that are found along the length of lymphatics at various intervals. The lymph trunk is a specific lymph vessel containing lymph. The various types of lymph trunks are:

i) jugular lymph trunk
ii) subclavian lymph trunk
iii) bronchomediastinal lymph trunk
iv) lumbar lymph trunk
v) intestinal lymph trunk

d) The Tonsils, Spleen, Thymus Gland and Peyer's Patches

The most important function of the lymphatic system is to drain the protein containing fluid from the tissue spaces. The entire lymphatics of the body converge into one of the following major channels:

i) thoracic duct (or the main collecting channel)
ii) right lymphatic duct

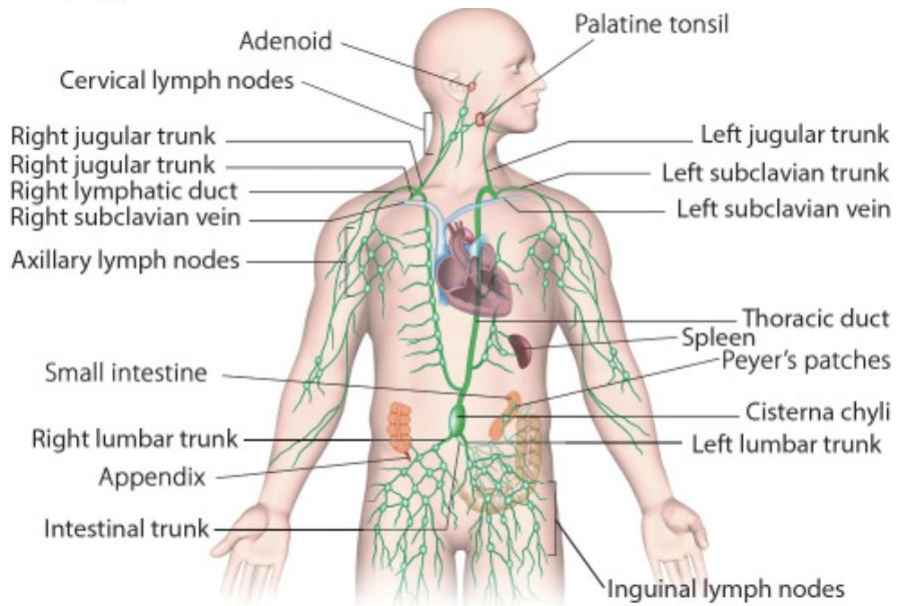

**Figure 9.f Lymphatic System Anatomy**

2. **Thoracic Duct**

The thoracic duct is the largest lymphatic vessel in the body and constitutes an essential part of the lymphatic system. It is also called the alimentary duct, chyliferous duct, left lymphatic duct or Van Hoorne's canal.

3. **Lymphatics of the Head, Face and Neck**

The entire lymph glands of the head are mostly extra-cranial, and arranged in the following groups:

a) **Occipital Lymph Glands**
The occipital lymph glands are two or three in number and located on the back of the head.

b) **Posterior Auricular Lymph Glands (or Mastoid Glands)**
The posterior auricular lymph glands are two in number and exist on the upper part of the sternomastoid muscle and mastoid portion of the temporal bone.

c) **Anterior Auricular Lymph Glands (or Superficial Parotid/Preauricular Glands)**
The superficial parotid glands are present on the lateral surface of the parotid gland.

d) **Parotid Lymph Glands (or Deep Parotid Glands)**
The parotid lymph glands remain embedded in the deeper portions of the parotid gland.

e) **Superficial Facial Lymph Glands**
The superficial facial lymph glands are based on several lymph glands in the region of face. However, the major ones are described below:
i) Infraorbital Lymph Glands (or Maxillary Glands): The infraorbital lymph glands remain scattered along the angle between the nose and cheek, and below the margin of the orbit.
ii) Buccinator Lymph Glands: The buccinator lymph glands are found on the superficial surface of the anterior part of buccinator muscle, opposite to the angle of the mouth.
iii) Supramandibular Lymph Glands: The supramandibular lymph glands lie on the outer surface of the mandible at the anterior border of the masseter muscle, between the external maxillary artery and the anterior facial vein.

f) **The Deep Facial Lymph Glands (or Internal Maxillary Glands)**
The deep facial lymph glands are found in association with the internal maxillary artery, on the outer surface of the external pterygoid muscle.

g) **The Lingual Lymph Glands**
The lingual lymph glands are based on two or three small nodules that exist on the lateral surfaces of the hypoglossal and genioglossus muscles.

h) **The Retropharyngeal Glands**
The retropharyngeal glands are located in the buccopharyngeal fascia behind the upper part of the pharynx.

4. **The Lymph Glands of the Neck**

The lymph glands of the neck are divided into the following major groups:

a) **The Submaxillary Glands**
The submaxillary glands are a pair of salivary glands located on each side under the body of the mandible.

b) **The Submental (or Suprahyoid Glands)**
The submental glands are located beneath the chin, and between the anterior bellies of the two digastric muscles.

c) **The Superficial Cervical Glands**
The superficial cervical glands remain embedded in the deep fascia along the course of the external jugular vein, and superficial to the sternomastoid muscle.

5. **The Anterior Cervical Glands**

The lymph glands of the anterior neck region are divisible into the following two groups:

a) **Superficial Anterior Cervical Lymph Glands**
The superficial anterior cervical lymph glands exist in association with the anterior jugular veins.

b) **Deep Anterior Cervical Lymph Glands**
The deep anterior cervical lymph glands are divisible into the following groups/types:
i) infrahyoid glands obtain lymph fluid from the region of epiglottis and transport it to the deep cervical glands.
ii) prelaryngeal gland obtains lymph from the anterior portion of the larynx, the isthmus, and the portions of the right and left lobes of the thyroid gland.
iii) pretracheal lymph glands are the numerous small nodules that follow the course of the inferior thyroid veins.
iv) paratracheal lymph glands lie in association with the branches of the superior and inferior thyroid arteries and the recurrent nerves.

c) **Deep Cervical Glands**
The deep cervical glands are the intercommunicating lymph vessels that remain positioned in the anterior and posterior triangles of the neck, and under the cover of the sternomastoid muscle. These glands are divisible into the following groups:
i) superior deep cervical glands are located under the cover of the sternomastoid muscle, and lie in close association with the accessory nerve and internal jugular vein.
ii) inferior deep cervical glands are located below the level of the omohyoid muscle.

d) Lymphatic vessels of the scalp are distributed in the soft tissue envelope of the frontal, temporoparietal and the occipital regions of the cranium.

e) Lymphatic Vessels of the Ear divide into upper and lateral portions of the auricle and terminate into the anterior auricular glands.

f) Lymphatic vessels of the face are more widely distributed than the scalp vessels.

**6. Lymphatic Vessels of the Eyelids and Conjunctiva**

The lymphatic vessels of the eyelids and conjunctiva form the following two groups:

a) **Medial Lymph Vessels**
The medial lymph vessels travel from the medial portions of the superior and inferior eyelids, and terminate to the submaxillary lymph glands.

b) **Lateral Lymph Vessels**
The lateral lymph vessels arise from the lateral parts of the eyelids, and terminate into the anterior auricular and the parotid lymph glands.

c) **Lymphatic Vessels of the Cheeks**
The superficial and deep lymphatic vessels of the cheeks usually communicate with the submaxillary glands.

d) **Lymphatic Vessels of the Lips**
The lymphatic vessels of the lips drain lymph fluid to the submental and submaxillary glands.

e) **Lymphatic Vessels of the Nose**
The lymphatic vessels from the external part of the nose drain lymph fluid to the anterior auricular and submaxillary glands.

f) **Lymphatic Vessels of the Nasal Cavities**
The lymphatic vessels from the anterior and posterior portions of the nasal cavities drain lymph fluid to the submaxillary, the retropharyngeal, and the superior deep cervical glands.

g) **Lymphatic Vessels of the Mouth**
The lymphatic vessels of the mouth can be divided into the following groups:

h) **Lymphatic Vessels of the Palatine Tonsil**
The lymphatic vessels of the palatine tonsil arise from the buccopharyngeal fascia and constrictor pharyngis superior and meet with the superior deep cervical glands.

i) **Lymphatic Vessels of the Tongue**
The lymphatic vessels of the tongue are divided into the following three groups:
i) anterior lymph vessels of the tongue drain lymph fluid from the tip and lower surface of the tongue to the submental glands.
ii) middle lymph vessels of the tongue drain lymph fluid from the anterior two third portion of the tongue to the submaxillary and medial superior deep cervical glands.
iii) posterior lymph vessels of the tongue drain lymph fluid from the portion of the tongue, which lies in the anterior wall of pharynx.

j) **Lymphatic Vessels of the Gums**
The lymph vessels of the anterior portion of mandibular gum drain lymph fluid to the submandibular gland. The lymph vessels from the inner portion of the mandibular gum also drain lymph fluid to the submaxillary glands.

k) **Lymphatic Vessels of the Teeth**
The lymph vessels of the teeth and mandible transport lymph fluid to the sub maxillary or the superior deep cervical glands.

**7. The Lymphatics of the Upper Extremity**

The lymph glands of the upper extremity are divisible into the following two groups:

a) **The Superficial Lymph Gland**

The superficial lymph glands of the upper extremity are of the following types:

i) supratrochlear lymph glands are situated above the medial epicondyle of humerus, and drain lymph fluid from the middle, ring and little fingers, and the portions of the hand and forearm.
ii) deltoideopectoral lymph glands are located in the groove between the pectoralis major and deltoid muscles.

b) **The Deep Lymph Glands**

The deep lymph glands are chiefly found in the axillary region, where they constitute several constant as well as variable groups.

i) lateral group of axillary lymph glands lies along the line of the great axillary vessels. These glands drain lymph fluid from the greater part of the upper extremity to the central and inferior deep cervical glands.
ii) anterior group of axillary lymph glands travels from third to sixth intercostal space, along the line of the lateral thoracic artery.
iii) posterior group of axillary lymph glands lies along the posterior wall of axilla, and follow the course of the subscapular vessels.
iv) central group of axillary lymph glands are located in the central part of the axilla, and along the line of the intercostobrachial nerve.
v) infra-clavicular group of axillary lymph glands is found between the upper border of the pectoralis minor muscle and the clavicle, along the medial side of the axillary artery.

c) **The Lymphatic Vessels of the Upper Extremity**

The lymphatic vessels of the upper extremity are divisible into the following two groups:

i) superficial lymph vessels of the upper extremity are located in the skin and subcutaneous tissues, and commence in the cutaneous plexuses on the volar aspects of the fingers and hand.
ii) deep lymph vessels of the upper extremity follow the course of the deeper blood vessels in the regions of the forearm and hand.

**8. Lymphatics of the Lower Extremity:**

The lymph glands of the lower extremity are divisible into the following groups:

a) **The Superficial Lymph Glands**

superficial lymph glands are found in the superficial fascia in subinguinal and inguinal regions. These glands are separable into the following groups:

i) inguinal lymph glands are located above the level of the inguinal ligament.
ii) superficial sublingual lymph glands are divisible into the proximal and distal groups.

b) **Deep Lymph Glands**

The deep lymph glands of the inferior extremity are divided into the following two groups:

i) popliteal lymph glands are located in the popliteal fossa.
ii) deep sublingual lymph glands are located in the femoral trigone.

c) **Lymphatic Vessels of the Lower Extremity**

The lymphatic vessels of the lower extremity are based on the following two groups:

i) superficial lymphatic vessels are located in the superficial fascia and divided into vessels of the medial group arises on the tibial side and dorsum of the foot, and terminates in the distal group of superficial subinguinal glands and vessels of the lateral group commences from the fibular side of the foot.
ii) deep lymphatic vessels of the lower extremity follow the course of the deep blood vessels, and terminate into the deep subinguinal and hypogastric glands.

**9. The Lymphatics of the Abdomen and Pelvis**

The lymph glands of the abdomen and pelvis are divisible into parietal lymph glands and visceral lymph glands.

a) **External Iliac Glands**

The external iliac group of glands pertains to the pelvic region, located along the course of the external iliac vessels, and constitutes the lateral, intermediate and medial chains.

b) **Common Iliac Glands:**

The common iliac glands of the pelvis are located on the sides of the common iliac artery and below the bifurcation of aorta.

c) **Epigastric Glands**

The epigastric glands of the anterior abdominal wall are divisible into the following types:

i) superior epigastric gland is located in the superficial fascia of the median part of the epigastric region.
ii) inferior epigastric glands are located along the course of the inferior epigastric artery.

d) **Circumflex Iliac Glands**
The circumflex iliac glands of the anterior abdominal wall follow the course of the deep circumflex iliac artery in the lateral aspect of groin.

e) **Hypogastric Glands**
The hypogastric glands of the pelvis are located along the course of the hypogastric vessels.
i) gluteal lymph glands
ii) pubo-gluteal lymph glands
iii) middle hemorrhoidal gland
iv) inter-iliac glands
v) obturator gland

f) **Sacral Glands**
The sacral lymph glands of the pelvis are located along the anterior aspect of sacrum, between the anterior sacral foramina.

g) **Lumbar Glands**
The lumbar lymph glands are located behind the peritoneum of the posterior wall of the abdomen. The lumbar lymph glands are further separable into the following groups:
i) right lateral aortic glands
ii) left lateral aortic glands
iii) preaortic glands
iv) retroaortic glands

h) **Superior Gastric Glands**
The superior gastric glands exist in association with the left gastric artery and constitute the following subdivisions:
i) anterior left gastric glands (or lower coronary glands)
ii) right paracardial glands
iii) left paracardial glands
iv) posterior paracardial glands
v) posterior left gastric glands (or upper coronary glands)
vi) right gastric gland (or pyloric gland)
vii) left suprapancreatic glands
viii) right suprapancreatic glands
ix) subpyloric glands
x) biliary lymph glands

i) **Inferior Gastric Glands (or Right Gastroepiploic Glands)**
The inferior gastric glands are associated with the greater curvature of the stomach and follow the course of the right gastroepiploic artery.

j) **Hepatic Glands**
The hepatic lymph glands exist in the region of porta hepatis (or transverse fissure of the liver), between the layers of the lesser omentum.

k) **Pancreaticolienal Glands (or Splenic Glands)**
The pancreaticolienal glands are positioned in relation to the posterior surface and upper border of pancreas, and follow the course of the lienal (or splenic) artery.

l) **Mesenteric Glands**
The mesenteric lymph glands are located between the layers of the mesentery.

m) **Ileocolic glands**
The ileocolic glands are located around the ileocolic artery and form the following major groups:
i) ileal glands
ii) anterior ileocolic glands
iii) posterior ileocolic glands
iv) right colic glands

n) **Mesocolic Glands**
The mesocolic glands exist in close association with the transverse colon.

o) **Inferior Mesenteric Glands**
The inferior mesenteric glands are located on the branches of the left colic and sigmoid arteries, the superior hemorrhoidal artery, and the muscular coat of the rectum.

10. **The Lymphatic Vessels of the Abdominal Viscera and the Superior and Posterior Walls of the Abdomen**
    a) Lymphatic Vessels of the Abdominal Part of the Alimentary Canal
    b) Lymphatic Vessels of the Stomach
    c) Lymphatic Vessels of the Duodenum
    d) Lymphatic Vessels of the Jejunum and Ileum (or the Lacteals)
    e) Lymphatic Vessels of the Cecum, Vermiform Process, and the Ascending Colon
    f) Lymphatic Vessels of the Right Colic Flexure and the Transverse Colon
    g) Lymphatic Vessels of the Left Colic Flexure, Descending Colon, Iliac Colon, and Pelvic Colon
    h) Lymphatic Vessels of the Liver
    i) Lymphatic Vessels of the Gall Bladder
    j) Lymphatic Vessels of the Pancreas
    k) Lymphatic Vessels of the Spleen
    l) Lymphatic Vessels of the Kidneys
    m) Lymphatic Vessels of the Ureters
    n) Lymphatic Vessels of the Suprarenal Glands
    o) Lymphatic Vessels of the Diaphragm

11. **The Lymphatic Vessels of the Pelvic Viscera**
    a) lymphatic Vessels of the Male Urethra
    b) Lymphatic Vessels of the Prostate
    c) Lymphatic Vessels of the Female Urethra
    d) Lymphatic Vessels of the Seminal Vesicle

12. **The Lymphatics of the Thorax**

    The Lymph Glands of the thorax are separable into the following groups:

    a) **Sternal Lymph Glands**
    The sternal lymph glands are located at the margins of the sternum along the side of the internal mammary artery.

    b) **Intercostal Lymph Glands**
    The intercostal lymph glands are situated in the posterior portions of the intercostal spaces (in relation to the intercostal vessels), and in front of the heads of the ribs.

    c) **Anterior Mediastinal Lymph Glands**
    The anterior mediastinal lymph glands are located in the lower portion of the anterior mediastinum, and the anterior part of the superior mediastinal cavity.

    d) **Posterior Mediastinal Lymph Glands**
    The posterior mediastinal lymph glands exist along the thoracic part of the esophagus and the descending thoracic aorta.

    e) **Bronchial Lymph Glands**
    The bronchial lymph glands lie along the walls of the intrathoracic of the trachea, the bronchi and their intrapulmonary branches. These glands are further categorized into the following groups:
        i) tracheobronchial lymph glands
        ii) lymph glands of the bifurcation (or intertracheobronchial lymph glands)
        iii) bronchopulmonary lymph glands
        iv) pulmonary lymph glands

**13. The Lymphatic Vessels of the Thorax**

These vessels are divisible into the following groups:

a) **Intercostal Lymph Vessels**
b) **Lymph Vessels of the Diaphragm**
c) **Lymphatic Vessels of the Contents of the Thorax**

The lymphatic vessels of the contents of the thorax are divisible into the following groups:

i) lymph vessels of the heart
ii) lymph vessels of the pericardium
iii) lymph vessels of the thymus
iv) lymph vessels of the thoracic part of esophagus
v) lymph vessels of the pleura
vi) lymph vessels of the lungs

## Diseases of the circulatory system (I00-I99)

EXCLUDES *certain conditions originating in the perinatal period (P04-P96)*

*certain infectious and parasitic diseases (A00-B99)*

*complications of pregnancy, childbirth and the puerperium (O00-O9A)*

*congenital malformations, deformations, and chromosomal abnormalities (Q00-Q99)*

*endocrine, nutritional and metabolic diseases (E00-E88)*

*injury, poisoning and certain other consequences of external causes (S00-T88)*

*neoplasms (C00-D49)*

*symptoms, signs and abnormal clinical and laboratory findings, not elsewhere classified (R00-R94)*

*systemic connective tissue disorders (M30-M36)*

*transient cerebral ischemic attacks and related syndromes (G45.-)*

## Acute rheumatic fever (I00-I02)

I00 **Rheumatic fever without heart involvement** CC/MCC Exc

**AHA:** Q4 2024, Q4 2023, Q4 2021, Q4 2020, Q4 2019, Q4 2016

INCLUDES *arthritis, rheumatic, acute or subacute*

EXCLUDES1 *rheumatic fever with heart involvement (I01.0 -I01.9)*

I01 **Rheumatic fever with heart involvement**

EXCLUDES1 *chronic diseases of rheumatic origin (I05-I09) unless rheumatic fever is also present or there is evidence of reactivation or activity of the rheumatic process.*

I01.0 **Acute rheumatic pericarditis** CC CC/MCC Exc

Any condition in I00 with pericarditis

Rheumatic pericarditis (acute)

EXCLUDES1 *acute pericarditis not specified as rheumatic (I30.-)*

I01.1 **Acute rheumatic endocarditis** CC CC/MCC Exc

Any condition in I00 with endocarditis or valvulitis

Acute rheumatic valvulitis

I01.2 **Acute rheumatic myocarditis** CC CC/MCC Exc

Any condition in I00 with myocarditis

I01.8 **Other acute rheumatic heart disease** CC CC/MCC Exc

Any condition in I00 with other or multiple types of heart involvement

Acute rheumatic pancarditis

I01.9 **Acute rheumatic heart disease, unspecified** CC CC/MCC Exc

Any condition in I00 with unspecified type of heart involvement

Rheumatic carditis, acute

Rheumatic heart disease, active or acute

I02 **Rheumatic chorea**

**DEFINITION:** Chorea is an abnormal involuntary movement resembling fidgeting or dancing.

INCLUDES *Sydenham's chorea*

EXCLUDES1 *chorea NOS (G25.5)*

*Huntington's chorea (G10)*

I02.0 **Rheumatic chorea with heart involvement** CC CC/MCC Exc

Chorea NOS with heart involvement

Rheumatic chorea with heart involvement of any type classifiable under I01.-

Rheumatic chorea NOS

## Chronic rheumatic heart diseases (I05-I09)

I05 **Rheumatic mitral valve diseases**

INCLUDES *conditions classifiable to both I05.0 and I05.2-I05.9, whether specified as rheumatic or not*

EXCLUDES1 *mitral valve disease specified as nonrheumatic (I34.-)*

*mitral valve disease with aortic and/or tricuspid valve involvement (I08.-)*

I05.0 **Rheumatic mitral stenosis** CC/MCC Exc

Mitral (valve) obstruction (rheumatic)

I05.1 **Rheumatic mitral insufficiency** CC/MCC Exc

Rheumatic mitral incompetence

Rheumatic mitral regurgitation

EXCLUDES1 *mitral insufficiency not specified as rheumatic (I34.0)*

I05.2 **Rheumatic mitral stenosis with insufficiency** CC/MCC Exc

Rheumatic mitral stenosis with incompetence or regurgitation

I05.8 **Other rheumatic mitral valve diseases** CC/MCC Exc

Rheumatic mitral (valve) failure

I05.9 **Rheumatic mitral valve disease, unspecified** CC/MCC Exc

Rheumatic mitral (valve) disorder (chronic) NOS

I06 **Rheumatic aortic valve diseases**

EXCLUDES1 *aortic valve disease not specified as rheumatic (I35.-)*

*aortic valve disease with mitral and/or tricuspid valve involvement (I08.-)*

Rheumatic aortic (valve) obstruction

I06.1 **Rheumatic aortic insufficiency** CC/MCC Exc

Rheumatic aortic incompetence

Rheumatic aortic regurgitation

I06.2 **Rheumatic aortic stenosis with insufficiency** CC/MCC Exc

Rheumatic aortic stenosis with incompetence or regurgitation

I06.8 **Other rheumatic aortic valve diseases** CC/MCC Exc

I06.9 **Rheumatic aortic valve disease, unspecified** CC/MCC Exc

Rheumatic aortic (valve) disease NOS

I07 Rheumatic tricuspid valve diseases

INCLUDES *rheumatic tricuspid valve diseases specified as rheumatic or unspecified*

EXCLUDES1 *tricuspid valve disease specified as nonrheumatic (I36.-)*

*tricuspid valve disease with aortic and/or mitral valve involvement (I08.-)*

I07.0 Rheumatic tricuspid stenosis CC/MCC Exc

Tricuspid (valve) stenosis (rheumatic)

I07.1 Rheumatic tricuspid insufficiency CC/MCC Exc

Tricuspid (valve) insufficiency (rheumatic)

I07.2 Rheumatic tricuspid stenosis and insufficiency CC/MCC Exc

I07.8 Other rheumatic tricuspid valve diseases CC/MCC Exc

I07.9 Rheumatic tricuspid valve disease, unspecified CC/MCC Exc

Rheumatic tricuspid valve disorder NOS

I08 Multiple valve diseases

INCLUDES *multiple valve diseases specified as rheumatic or unspecified*

EXCLUDES1 *endocarditis, valve unspecified (I38)*

*rheumatic valve disease NOS (I09.1)*

EXCLUDES2 *multiple valve disease specified as nonrheumatic (I34.-, I35.-, I36.-, I37.-, I38.-, Q22.-, Q23.-, Q24.8-)*

I08.0 Rheumatic disorders of both mitral and aortic valves CC/MCC Exc

AHA: Q1 2025, Q2 2019

Involvement of both mitral and aortic valves specified as rheumatic or unspecified

I08.1 Rheumatic disorders of both mitral and tricuspid valves CC/MCC Exc

I08.2 Rheumatic disorders of both aortic and tricuspid valves CC/MCC Exc

I08.3 Combined rheumatic disorders of mitral, aortic and tricuspid valves CC/MCC Exc

I08.8 Other rheumatic multiple valve diseases CC/MCC Exc

I08.9 Rheumatic multiple valve disease, unspecified CC/MCC Exc

I09 Other rheumatic heart diseases

I09.0 Rheumatic myocarditis CC CC/MCC Excl

Excludes1 myocarditis not specified as rheumatic (I51.4)

I09.1 Rheumatic diseases of endocardium, valve unspecified CC/MCC Excl

Rheumatic endocarditis (chronic)

Rheumatic valvulitis (chronic)

Excludes1 endocarditis, valve unspecified (I38)

I09.2 Chronic rheumatic pericarditis CC CC/MCC Excl

Adherent pericardium, rheumatic

Chronic rheumatic mediastinopericarditis

Chronic rheumatic myopericarditis

Excludes1 chronic pericarditis not specified as rheumatic (I31.-)

I21 Acute myocardial infarction

See Official Guidelines, "Acute myocardial infarction (AMI)" I.C.9.e

**DEFINITION:** (1) A Type 1 myocardial infarction is a spontaneous heart attack caused by plaque, erosion, fissure, rupture, or dissection. (2) A STEMI is an ST-elevation myocardial infarction with 100 percent blockage of a coronary artery. A STEMI is more severe than an NSTEMI.

INCLUDES *cardiac infarction*
*coronary (artery) embolism*
*coronary (artery) occlusion*
*coronary (artery) rupture*
*coronary (artery) thrombosis*
*infarction of heart, myocardium, or ventricle*

## I22 Subsequent ST elevation (STEMI) and non-ST elevation (NSTEMI) myocardial infarction

**See Official Guidelines**, "Subsequent acute myocardial infarction" I.C.9.e.4

**DEFINITION:** A STEMI is an ST-elevation myocardial infarction with 100 percent blockage of a coronary artery. A STEMI is more severe than an NSTEMI.

**TIP:** Use a code from this category when a patient who has suffered a type 1 or unspecified acute myocardial infarction (AMI) has a new AMI within four weeks of the initial AMI.

INCLUDES *acute myocardial infarction occurring within four weeks (28 days) of a previous acute myocardial infarction, regardless of site*
*cardiac infarction*
*coronary (artery) embolism*
*coronary (artery) occlusion*
*coronary (artery) rupture*
*coronary (artery) thrombosis*
*infarction of heart, myocardium, or ventricle*
*recurrent myocardial infarction*
*reinfarction of myocardium*
*rupture of heart, myocardium, or ventricle*
*subsequent type 1 myocardial infarction*

**Use additional** code, if applicable, to identify:
exposure to environmental tobacco smoke (Z77.22)
history of tobacco dependence (Z87.891)
occupational exposure to environmental tobacco smoke (Z57.31)
status post administration of tPA (rtPA) in a different facility within the last 24 hours prior to admission to current facility (Z92.82)
tobacco dependence (F17.-)
tobacco use (Z72.0)

# Chapter 10: Diseases of the Respiratory System (J00-J99)

## Chapter-Specific Coding Guidelines

**I.C.10. Chapter 10: Diseases of the Respiratory System (J00-J99), U07.0**

**a. Chronic Obstructive Pulmonary Disease [COPD] and Asthma**

**1) Acute exacerbation of chronic obstructive bronchitis and asthma**

The codes in categories J44 and J45 distinguish between uncomplicated cases and those in acute exacerbation. An acute exacerbation is a worsening or a decompensation of a chronic condition. An acute exacerbation is not equivalent to an infection superimposed on a chronic condition, though an exacerbation may be triggered by an infection.

**b. Acute Respiratory Failure**

**1) Acute respiratory failure as principal diagnosis**

A code from subcategory J96.0, Acute respiratory failure, or subcategory J96.2, Acute and chronic respiratory failure, may be assigned as a principal diagnosis when it is the condition established after study to be chiefly responsible for occasioning the admission to the hospital, and the selection is supported by the Alphabetic Index and Tabular List. However, chapter- specific coding guidelines (such as obstetrics, poisoning, HIV, newborn) that provide sequencing direction take precedence.

**2) Acute respiratory failure as secondary diagnosis**

Respiratory failure may be listed as a secondary diagnosis if it occurs after admission, or if it is present on admission, but does not meet the definition of principal diagnosis.

**3) Sequencing of acute respiratory failure and another acute condition**

When a patient is admitted with respiratory failure and another acute condition, (e.g., myocardial infarction, cerebrovascular accident, aspiration pneumonia), the principal diagnosis will not be the same in every situation. This applies whether the other acute condition is a respiratory or nonrespiratory condition.

Selection of the principal diagnosis will be dependent on the circumstances of admission. If both the respiratory failure and the other acute condition are equally responsible for occasioning the admission to the hospital, and there are no chapter-specific sequencing rules, the guideline regarding two or more diagnoses that equally meet the definition for principal diagnosis (*Section II, C.*) may be applied in these situations.

If the documentation is not clear as to whether acute respiratory failure and another condition are equally responsible for occasioning the admission, query the provider for clarification.

**c. Influenza due to certain identified influenza viruses**

Code only confirmed cases of influenza due to certain identified influenza viruses (category J09), and due to other identified influenza virus (category J10). This is an exception to the hospital inpatient guideline Section II, H. (Uncertain Diagnosis).

In this context, "confirmation" does not require documentation of positive laboratory testing specific for avian or other novel influenza A or other identified influenza virus. However, coding should be based on the provider's diagnostic statement that the patient has avian influenza, or other novel influenza A, for category J09, or has another particular identified strain of influenza, such as H1N1 or H3N2, but not identified as novel or variant, for category J10.

If the provider records "suspected" or "possible" or "probable" avian influenza, or novel influenza, or other identified influenza, then the appropriate influenza code from category J11, Influenza due to unidentified influenza virus, should be assigned. A code from category J09, Influenza due to certain identified influenza viruses, should not be assigned nor should a code from category J10, Influenza due to other identified influenza virus.

**d. Ventilator associated Pneumonia**

**1) Documentation of Ventilator associated Pneumonia**

As with all procedural or postprocedural complications, code assignment is based on the provider's documentation of the relationship between the condition and the procedure.

Code J95.851, Ventilator associated pneumonia, should be assigned only when the provider has documented ventilator associated pneumonia (VAP). An additional code to identify the organism (e.g., Pseudomonas aeruginosa, code B96.5) should also be assigned. Do not assign an additional code from categories J12-J18 to identify the type of pneumonia.

Code J95.851 should not be assigned for cases where the patient has pneumonia and is on a mechanical ventilator and the provider has not specifically stated that the pneumonia is ventilator-associated pneumonia. If the documentation is unclear as to whether the patient has a pneumonia that is a complication attributable to the mechanical ventilator, query the provider.

**2) Ventilator associated Pneumonia Develops after Admission**

A patient may be admitted with one type of pneumonia (e.g., code J13, Pneumonia due to Streptococcus pneumonia) and subsequently develop VAP. In this instance, the principal diagnosis would be the appropriate code from categories J12-J18 for the pneumonia diagnosed at the time of admission. Code J95.851, Ventilator associated pneumonia, would be assigned as an additional diagnosis when the provider has also documented the presence of ventilator associated pneumonia.

**e. Vaping-related disorders**

For patients presenting with condition(s) related to vaping, assign code U07.0, Vaping-related disorder, as the principal diagnosis. For lung injury due to vaping, assign only code U07.0. Assign additional codes for other manifestations, such as acute respiratory failure (subcategory J96.0-) or pneumonitis (code J68.0).

Associated respiratory signs and symptoms due to vaping, such as cough, shortness of breath, etc., are not coded separately, when a definitive diagnosis has been established. However, it would be appropriate to code separately any gastrointestinal symptoms, such as diarrhea and abdominal pain.

*See Section I.C.1.g.1.c.i. for Pneumonia confirmed as due to COVID-19*

# Anatomy of the Respiratory System

## Introduction

The respiratory system, or respiratory tract, is responsible for the exchange of oxygen and carbon dioxide between the air we breathe and blood. It can be divided into the upper respiratory tract and the lower respiratory tract. The upper respiratory tract consists of the nose, nasal cavity, sinuses, larynx, and trachea, and the lower respiratory tract consisting of the bronchi and the lungs.

**1. An Outline of the Respiratory System**

a) The human respiratory system (Figure 10.a) is based on the following organs:
   i) nose
   ii) pharynx
   iii) larynx
   iv) trachea
   v) bronchi
   vi) lungs

b) The process of respiration involves the exchange of oxygen and carbon dioxide between the atmosphere, blood and cells.

**2. The Anatomy of the Nose**

a) The nostrils or external nares are openings into the external nose.
b) The internal nares serve to connect the internal nose with the throat or pharynx.
c) The nasal septum divides the nose into the right and left nasal cavities.
d) The internal nose contains three turbinate bones (superior, middle and inferior meatus).
e) The olfactory receptors are located in the superior meatus.

**3. The Anatomy of the Pharynx**

a) The pharynx is a resonating chamber for speech sounds and also provides a passage to both air and food.
b) The nasopharynx, oropharynx and laryngopharynx are the parts of the pharynx.
c) The nasopharynx surrounds the pharyngeal tonsils. It contains two internal nares and the openings of the eustachian tubes.
d) The oropharynx surrounds the palatine and lingual tonsils and its opening (or fauces) provides connection to the mouth.
e) The laryngopharynx gets connected with the larynx on anterior aspect and the esophagus posteriorly.

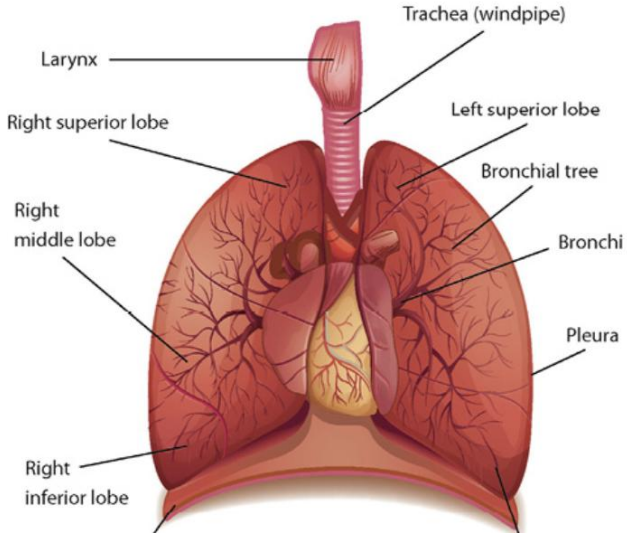

**Figure 10.a Respiratory System Anatomy**

**4. The Anatomy of the Larynx**

a) The larynx is also known as the voice box.
b) The skeleton of the larynx is made up of nine cartilages. Three of them are single (thyroid, cricoid, and epiglottis) and the remaining three (arytenoid, corniculate, and cuneiform) are paired cartilages.
c) The thyroid cartilage is also known as the Adam's apple. It is the largest single cartilage of the laryngeal skeleton.
d) The cricoid cartilage connects with the first tracheal ring and is made up of a single ring of cartilage.
e) The epiglottis is a large and single leaf-shaped flap of elastic cartilage. It is lined with the mucous membrane and remains attached to the entrance of larynx. It pulls down over the glottis during the process of swallowing to obstruct the entrance of the fluids and food in the trachea.
f) The arytenoid cartilages are formed by a pair of three ladle-shaped pyramids that remain attached to the laryngeal muscles and the vocal cords.
g) The corniculate cartilages are based on two cone-shaped nodules of yellow elastic cartilage.
h) The cuneiform cartilages are also known as the cartilages of Wrisberg. They are based on two rod-shaped pieces of yellow elastic cartilage.
i) The mucous membrane of the larynx is divided into two pairs of folds. The vestibular folds (or false vocal cords) constitute the upper pair, while the vocal folds (or true vocal cords) form the lower pair of fold.
j) The opening over the true vocal cords is known as the glottis.

**5. The Anatomy of the Trachea**

a) The trachea is also known as the windpipe and located anteriorly to the esophagus.
b) It begins at the larynx and gets divided into primary bronchi at the level of T4/T5 vertebrae.
c) The trachea is lined by the respiratory epithelium and consists of a series of incomplete C-shaped cartilaginous rings.

**6. The Anatomy of the Bronchial Tree**

a) The bronchial tree is based on right and left primary bronchi, secondary and tertiary bronchi, and the bronchioles.
b) The right and left primary bronchi emanate from the trachea and merge with the right and left lungs.
c) The primary bronchi further get branched into the secondary (or lobar) bronchi that penetrate into the lobes of the lungs.
d) The secondary bronchi further get divided into the tertiary or segmental bronchi that penetrate into the segments of the lobes of the lungs.
e) The bronchioles are the branches that emanate from the tertiary bronchi.

**7. The Anatomy of the Lungs**

a) The lungs are the human organs of respiration.
b) The right and left lungs are based on multiple lobes. The right lung contains three lobes, while the left lung is based on two lobes.
c) The lungs are protected by the pleural membrane. The pleural membrane is further made up of two layers of serous membranes. The outer layer is known as the parietal pleura, while the inner layer is termed as the visceral pleura.
d) The bronchopulmonary segment is a segment of lung tissue that is supplied by each of the tertiary bronchi. It is divided into multiple lobules that remain covered with the elastic connective tissue.
e) A terminal bronchiole exists at the end of the conducting zone of the respiratory system.
f) The microscopic respiratory bronchioles are the subdivisions of the terminal bronchioles. The atria or the alveolar ducts emanate from these respiratory bronchioles.
g) The alveoli and alveolar sacs lie around the circumference of the alveolar ducts.
h) The alveolar sac is made up of two or more alveoli with a common opening.
i) The respiratory (or the alveolar capillary) membrane is a membrane that provides a medium for the movement of respiratory gases.

**8. The Process of Respiration**

a) The respiration in humans is based on the following stages:
    i) Ventilation is also known as the breathing, which involves the movement of the ambient air into the alveoli of the lungs.
    ii) The process of pulmonary gas exchange is based on the exchange of respiratory gases between the alveoli and the pulmonary capillaries.
    iii) The gas process involves the transport of respiratory gases from the pulmonary capillaries to the peripheral capillaries in the organs via circulation.
    iv) Peripheral gas exchange is the process of exchange of respiratory gases between the tissue capillaries and the cells and mitochondria.
b) Nasal breathing is the process of respiration that involves the inhalation and exhalation of the respiratory gases through the nose.

# Common Pathologies

**Sinusitis (Figure 10.b)**
Inflammation of mucous membrane lining that lines the paranasal sinuses. This inflammation dries out the sinuses and can also cause dizziness and difficulty breathing. Using a humidifier can alleviate symptoms

**Epiglottitis**
Inflammation of the epiglottis caused by H. Influenzae type B; characterized by fever and a severe sore throat and difficulty in swallowing.

**Laryngitis**
Inflammation of the larynx and vocal cords resulting in hoarseness of the voice (Dysphonia), and difficulty in swallowing (Dysphagia).

**Pharyngitis**
Inflammation of the pharynx, usually causing a sore throat. Acute Pharyngitis is a sudden, severe inflammation of the pharynx. Chronic Pharyngitis is a persistent throat inflammation that may be associated with the lymphoid granules in the pharyngeal mucosa.

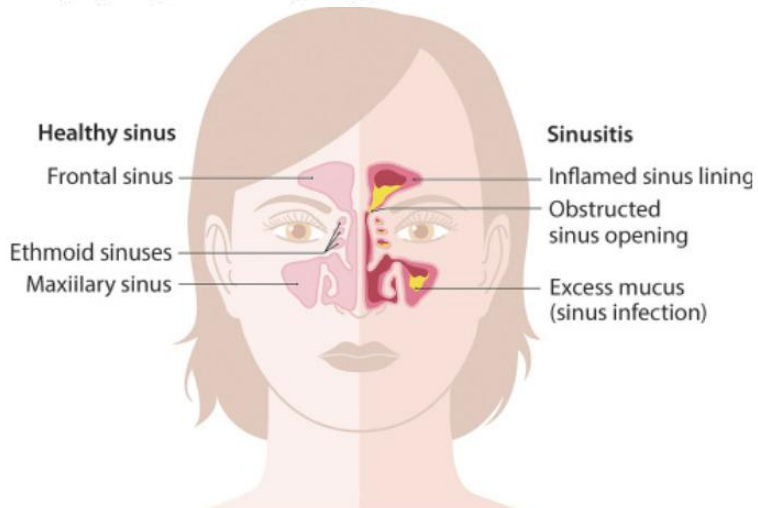

**Figure 10.b Sinusitis**

**Acute Bronchitis**
Inflammation of the mucous membrane lining the bronchus, involves the trachea resulting in tracheobronchitis, chest tightness, fever, and a cough that progresses from nonproductive to productive.

**Chronic Bronchitis**
Inflammation of the bronchial mucous membrane characterized by cough, hyper-secretion of mucus, and expectoration of sputum over a long period of time and associated with increased vulnerability to bronchial infection.

**Influenza**
Influenza is a highly infectious respiratory disease. The disease is caused by certain strains of the influenza virus.

**Pneumonia (Figure 10.c)**
Pneumonia is an infection of the lung that can be caused by nearly any class of organism known to cause human infections. These include bacteria, amoebae, viruses, fungi, and parasites.

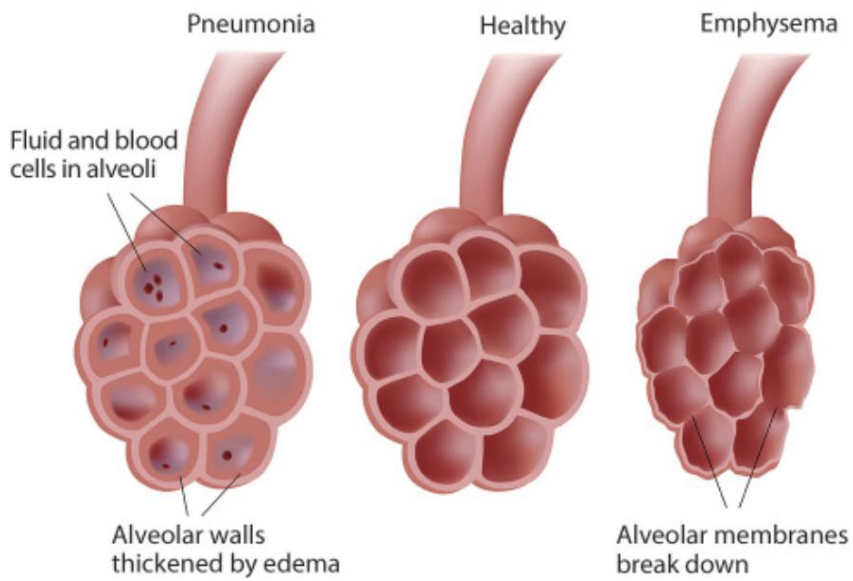

**Figure 10.c Healthy Lung Alveoli and Alveoli with Pneumonia or Emphysema**

**Pulmonary Abscess**

Lung abscess that is a collection of infectious material contained within a capsule in the lung, which results in coughing of bloody or foul-smelling sputum (breath foul-smelling). The most important preventative measure to avoid pulmonary abscess is to prevent aspiration.

**Pulmonary Tuberculosis (TB)**

Pulmonary tuberculosis is an infection (inflammation) caused by mycobacterium tuberculosis. Pathologic changes depend on the type of infection or "exposure" which are: Primary pulmonary TB (Primary Exposure), Secondary pulmonary TB (Reactivation) and Progressive pulmonary TB.

**Asthma**

Asthma (Figure 10.d) is a common chronic inflammatory disease of the airways characterized by variable and recurring symptoms, reversible airflow obstruction, and bronchospasm. Common symptoms include wheezing, coughing, chest tightness, and shortness of breath.

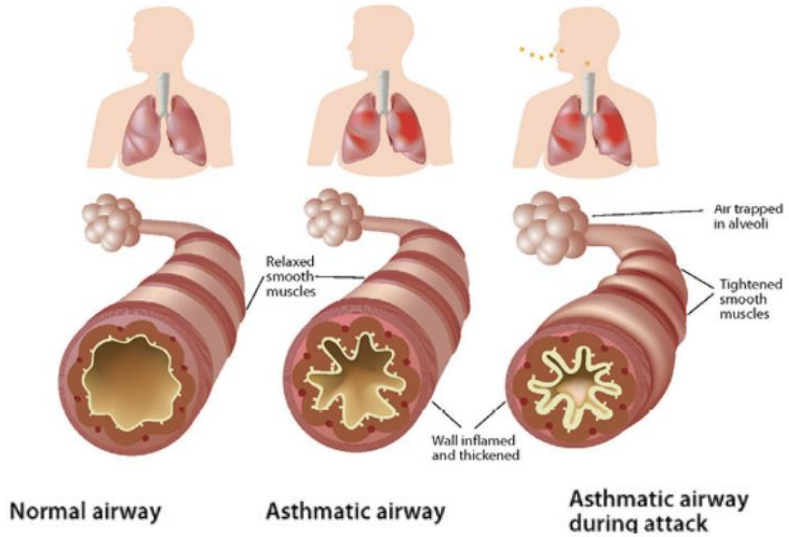

**Figure 10.d Normal Airway and Asthmatic Airway**

**Cystic Fibrosis**

Cystic Fibrosis (Figure 10.e) is an autosomal recessive genetic disorder that affects most critically the lungs, and also the pancreas, liver, and intestine. It is characterized by abnormal transport of chloride and sodium across an epithelium, leading to thick, viscous secretions.

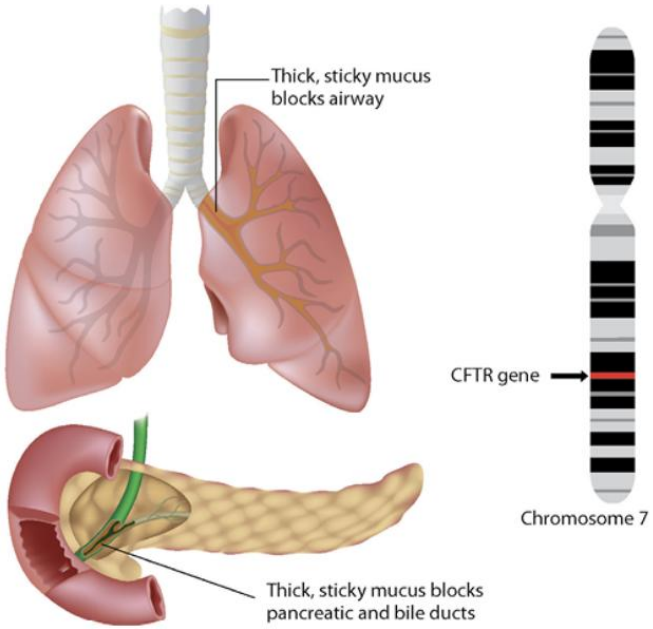

**Figure 10.e Cystic Fibrosis**

**Chronic Obstructive Pulmonary Disease (COPD)**

Chronic obstructive pulmonary disease (COPD) is a lung disease characterized by chronic obstruction of lung airflow that interferes with normal breathing and is not fully reversible. The more familiar terms 'chronic bronchitis' and 'emphysema' are no longer used, but are now included within the COPD diagnosis.

**Emphysema (Figure 10.c)**

Emphysema is a chronic lung disease caused by damage to the alveoli, the tiny air sacs in the lung where exchange of oxygen and carbon dioxide takes place. With emphysema, damage to the alveoli results in air becoming trapped, causing them to expand and rupture.

**Bronchiectasis**

Bronchiectasis is a disease state defined by localized, irreversible dilation of part of the bronchial tree caused by destruction of the muscle and elastic tissue. It is classified as an obstructive lung disease, along with emphysema, bronchitis, asthma, and cystic fibrosis.

## Diseases of the respiratory system (J00-J99)

**NOTES** When a respiratory condition is described as occurring in more than one site and is not specifically indexed, it should be classified to the lower anatomic site (e.g. tracheobronchitis to bronchitis in J40).

# Chapter 11: Diseases of the Digestive System (K00-K95)

## Chapter-Specific Coding Guidelines

**I.C.11. Chapter 11: Diseases of the Digestive System (K00-K95)**

Reserved for future guideline expansion.

## Anatomy of the Digestive System

### Introduction

The digestive system, or digestive tract (Figure 11.a), is responsible for breaking down food into nutrients that can be readily absorbed into the bloodstream. The digestive tract begins at the mouth and ends at the anus. Many accessory glands support the digestive tract and secrete enzymes for digestion.

**1. An Overview of the Digestive System**

a) The process of digestion involves the breaking down of food into the simpler substances that can be utilized by multiple cells of the body for producing high energy (or ATP) molecules.
b) The digestive system is based on the processes of ingestion, peristalsis, digestion, absorption and defecation.
c) The mouth, pharynx, esophagus, stomach, small and large intestines, and anus are regarded as the organs of the digestive tract.
d) The teeth, tongue, salivary glands, liver, gall bladder and pancreas are known as the accessory or subordinate organs of the digestive tract.
e) The mucosa, submucosa, muscularis and adventitia (or serosa) are the coats (or tunics) of the digestive tract.

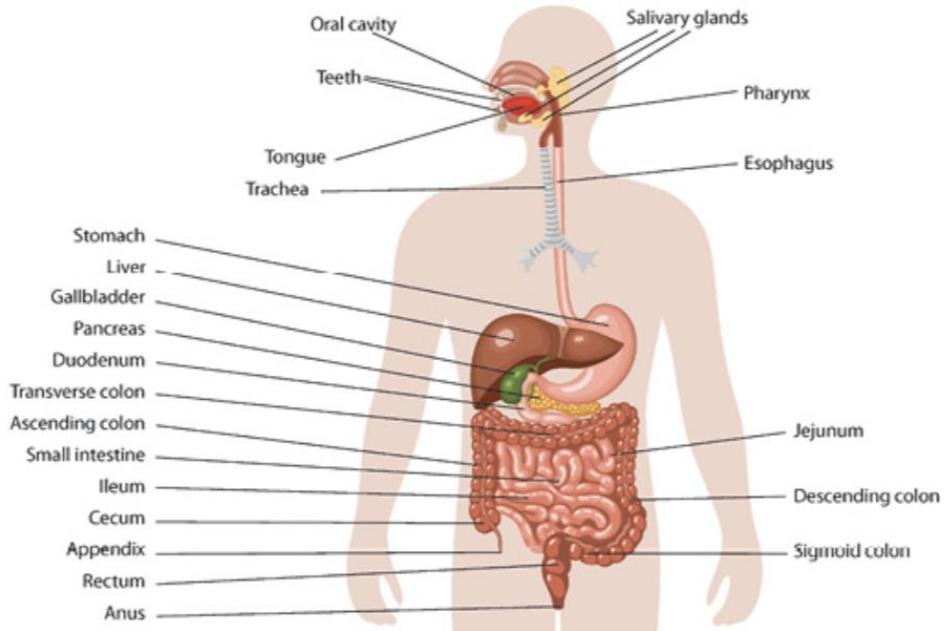

**Figure 11.a Digestive System Anatomy**

**2. The Anatomy of the Oral Cavity**

a) The oral cavity is also known as the mouth (Figure 11.b) and is the first portion of the alimentary canal that receives food and saliva.
b) The functions of the oral cavity are:
   i) taste (through the taste buds on tongue).
   ii) mechanical breakdown of the food by the teeth.
   iii) chemical digestion of carbohydrates by the salivary enzyme amylase.
c) The oral cavity is composed of the following components:
   i) mucus membrane that lines the oral cavity.
   ii) tongue that forms the floor of the oral cavity.
   iii) hard and soft palate that forms the roof of the oral cavity.
   iv) cheeks that form the sides of the oral cavity.

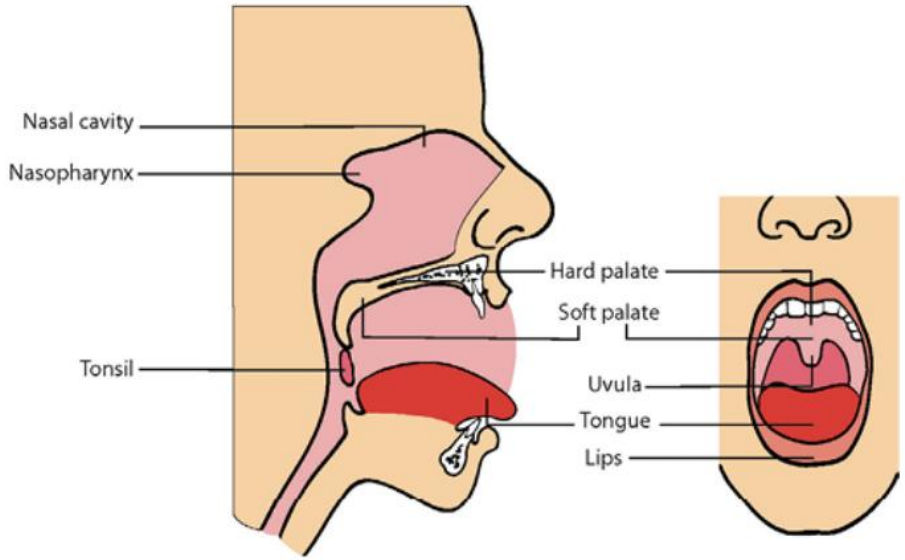

**Figure 11.b Human Mouth**

d) The salivary glands (Figure 11.c) are the exocrine glands that produce saliva. The parotid, submandibular (or submaxillary) and the sublingual glands are the three pairs of salivary glands.
e) A typical human tooth is made up of dentin and consists of the following components:
   i) crown, which remains covered with enamel.
   ii) neck (or cervix).
   iii) root.
   iv) periodontal ligament, which fixates the tooth into its alveolar socket.

**3. The Anatomy of the Pharynx**

a) The pharynx is the part of the throat that remains situated behind the nasal cavity and mouth and is a common passageway for food and air.
b) The nasopharynx, oropharynx and laryngopharynx are the three parts of the pharynx.
c) The pharynx is a part of both the digestive and respiratory systems and facilitates the process of speech production and swallowing (or deglutition).

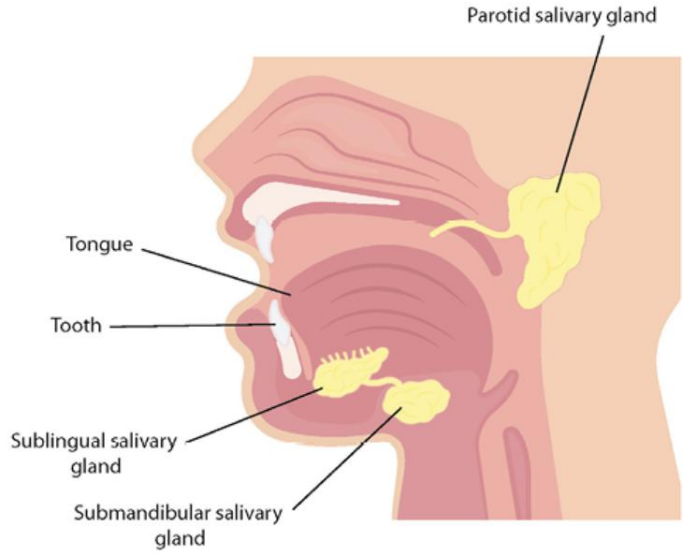

**Figure 11.c The Salivary Glands**

**4. The Anatomy of the Esophagus**

a) The esophagus is a muscular tube for transporting the food from the pharynx to the stomach through the esophageal hiatus (or opening in the diaphragm).
b) The food is propelled into the stomach via the lower esophageal sphincter. The movement of food is caused by the peristalsis (or symmetrical contraction and relaxation) of the smooth muscles.

**5. The Anatomy of the Stomach**

a) The stomach is a muscular and hollow organ of the digestive tract and facilitates the second phase of digestion. It is positioned between the esophagus and the small intestine.
b) The stomach aids in the digestion of food by performing the chemical breakdown of proteins through the protein-digesting enzyme pepsin.
c) The stomach is based on the following four parts:
    i) cardia
    ii) fundus
    iii) body
    iv) pylorus
d) The partially digested food (or chyme) is transported to the small intestine from the stomach.
e) There are three kind of secretory cells in the gastric glands of the stomach mucosa.
    i) zymogenic cells, which secrete pepsinogen.
    ii) parietal cells, which secrete hydrochloric acid.
    iii) mucous cells, which secrete mucus.
f) The stomach contains the below mentioned two sphincters (to retain the food contents inside it):
    i) esophageal sphincter, which is located in the cardiac region of the stomach.
    ii) pyloric sphincter, which demarcates the stomach from the small intestine.

**6. The Anatomy of the Pancreas**

a) The pancreas (Figure 11.d) is a glandular organ of both the digestive and endocrine systems.
b) The pancreas is an endocrine as well as exocrine gland, and secretes hormones (like insulin, glucagon, and somatostatin) and the pancreatic juice (which contains several digestive enzymes). The digestive enzymes of the pancreatic juice facilitate the breakdown of the carbohydrates, proteins, and lipids in the chyme (or the partially digested food).
c) The pancreas contains two types of the parenchymal tissues:
   i) pancreatic acini, which produce the digestive enzymes into the duodenum of the small intestine.
   ii) pancreatic islets of Langerhans, which secrete insulin and glucagon hormones into the blood for maintaining blood sugar levels.

**7. The Anatomy of the Liver**

a) The liver (Figure 11.d) is the largest glandular organ of the human body. It weighs about 1500g and is divided into the right and left lobes.
b) The lobules are the functional units of the liver.
c) The primary function of the liver is the storage of glycogen and secretion of bile. It also produces heparin, prothrombin, and thrombin.
d) The Kupffer cells (or stellate macrophages) of the liver perform phagocytosis of the bacteria and the worn out blood cells.
e) The liver stores various elements like copper, iron, and vitamins A, D, E, and K. It also helps to detoxify the poisonous substances in the human body, and produces bile salts for the emulsification (or break down) of the body fats.
f) The liver lobules facilitate the production of bile, which is then stored and concentrated in gall bladder.
g) The common bile duct carries the bile from the liver and gallbladder (Figure 11.d) to the duodenum. It is formed by the union of the cystic and hepatic ducts.
h) The porta hepatis is a transverse fissure in the middle visceral surface of the liver that gives passage to the hepatic portal vein, hepatic artery, hepatic nerve plexus, hepatic ducts, and the lymphatic vessels.

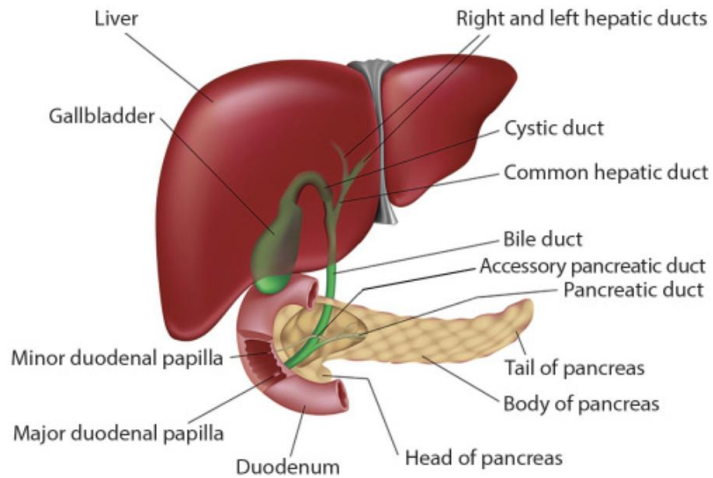

**Figure 11.d Liver, Gallbladder, and Pancreas**

**8. The Anatomy of the Small Intestine**

a) The small intestine extends from the pylorus of the stomach to the ileocecal junction. It is divided into the duodenum, jejunum and ileum.
b) The ileocecal valve serves to connect the small intestine with the large intestine.
c) The small intestine is involved in the completion of absorption of the digested food through the intestinal digestive enzymes, which are secreted by the intestinal glands (or the crypts of Lieberkuhn).
d) The Brunner's glands (or pancreal glands/duodenal glands) are the compound tubular submucosal glands of the duodenum that secrete alkaline mucus.

**9. The Anatomy of the Large Intestine**

a) The large intestine performs the following functions:
   i) reabsorption of water.
   ii) absorption and manufacture of vitamins.
   iii) formation and expulsion of feces.
b) The large intestine is based on cecum, colon, rectum, and anus.
c) The colon is divided into the following parts:
   i) ascending colon
   ii) right colic (or hepatic) flexure
   iii) transverse colon
   iv) left colic (or splenic) flexure
   v) descending colon
   vi) sigmoid colon
d) The rectum terminates at the anus. The dilated portion of the rectum where feces are stored (before their elimination through the anal canal) is termed as the rectal ampulla.

# Common Pathologies

**Appendicitis (Figure 11.e)**

Inflammation of the appendix, which is usually acute and caused by the blocking of the appendix.

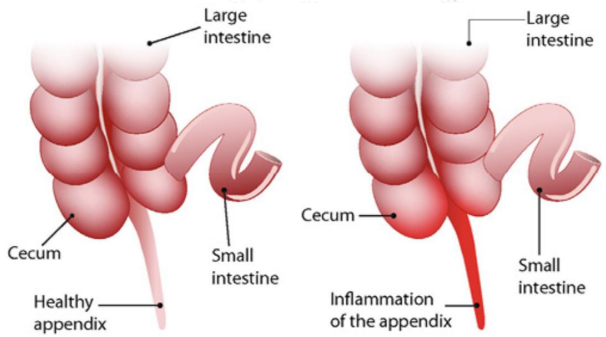

**Figure 11.e Appendicitis**

**Ascites**

Condition of abnormal accumulation of serous fluid in the peritoneal cavity.

**Cirrhosis of Liver (Figure 11.f)**

This is a chronic liver disease, which is characterized by destruction of liver cells that ultimately leads to ineffective liver function and jaundice.

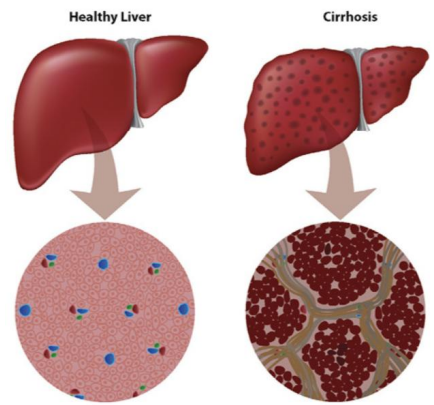

**Figure 11.f Cirrhosis of the Liver**

**Diverticular Disease**
This is a condition in which bulging pouches (known as diverticula) in the gastrointestinal (GI) tract push the mucosal lining through the surrounding muscle.

**Dysentery**
This is a condition that leads to inflammation of the intestine, especially of the colon, which may be caused by chemical irritants, bacteria, protozoa, or parasites.

**Fistula**
This is a condition in which there is an abnormal passage from one organ to another, or from a hollow organ to the surface.

**Gastroesophageal Reflux Disease (GERD)**
This is a condition that causes backflow (reflux) of gastric contents into the esophagus due to malfunction of the lower esophageal sphincter (LES).

**Hematochezia**
This is a condition marked by the passage of stools containing bright red blood.

**Hemorrhoid (Figure 11.g)**
This is a condition that causes a mass of enlarged, twisted varicose veins in the mucous membrane inside (internal) or just outside (external) the rectum; also known as piles.

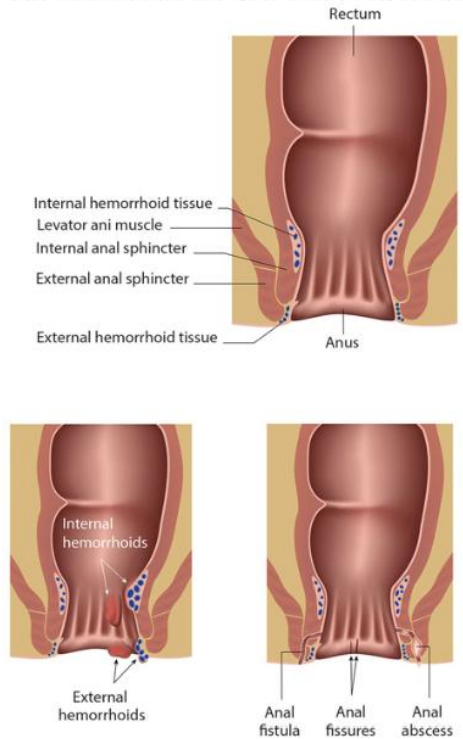

**Figure 11.g Hemorrhoids and Other Anal Disorders**

**Hernia**

This is a condition caused by the protrusion or projection of an organ or a part of an organ through the wall of the cavity that normally contains it. If a hernia protrudes through the diaphragm, it is called a Hiatal hernia (Figure 11.h).

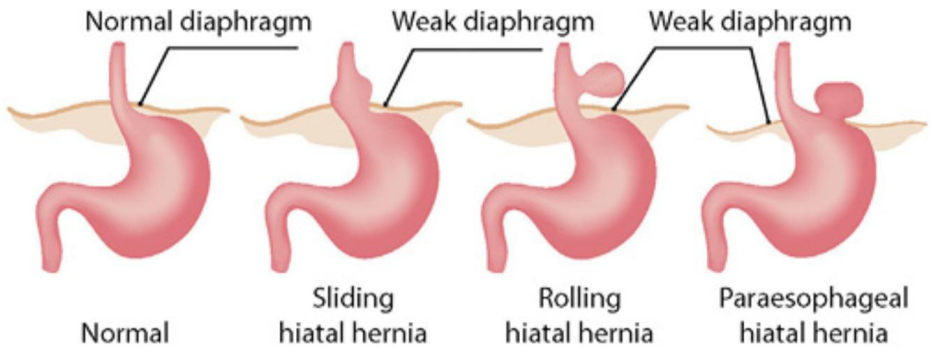

**Figure 11.h Hiatal Hernia**

**Inflammatory Bowel Disease (IBD) (Figure 11.i)**

This is a condition in which ulceration of the colon mucosa occurs. Ulcerative colitis and Crohn's disease are forms of IBD.

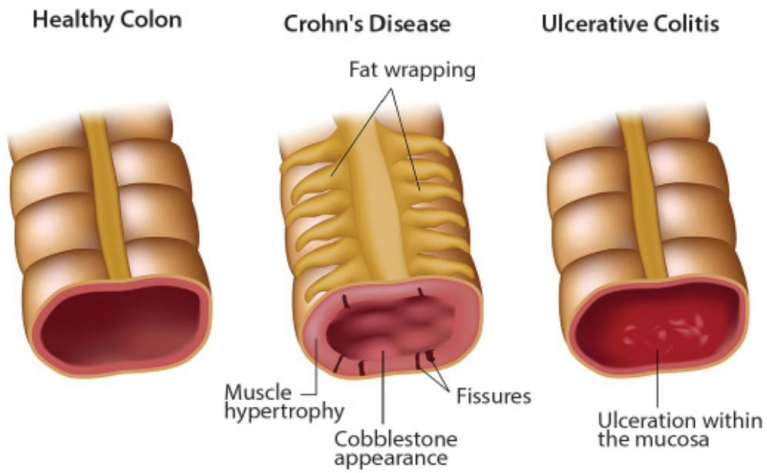

**Figure 11.i Inflammatory Bowel Disease**

**Crohn's Disease**
This is the condition of chronic IBD that usually affects the ileum but may affect any portion of the intestinal tract.

**Ulcerative Colitis**
This is the condition of chronic IBD of the colon characterized by episodes of diarrhea, rectal bleeding, and pain.

**Irritable Bowel Syndrome (IBS)**
This is the condition characterized by gastrointestinal signs and symptoms, including constipation, diarrhea, gas, and bloating, all in the absence of organic pathology; also called spastic colon.

**Jaundice**
This is the condition in which yellow discoloration of the skin, mucous membranes, and sclerae of the eyes is caused by excessive levels of bilirubin in the blood (hyperbilirubinemia).

**Obesity**
This is the condition in which a person accumulates an amount of fat that exceeds the body's skeletal and physical standards, usually an increase of 20 percent or more above ideal body weight.

**Morbid Obesity**
Condition of more severe obesity in which a person has a body mass index (BMI) of 40 or greater, which is generally 100 or more pounds over ideal body weight.

**Polyp**
A polyp is a small tumorlike, benign growth that projects from a mucous membrane surface.

**Polyposis**
This is a condition in which polyps develop in the intestinal tract.

**Peptic Ulcer (Figure 11.j)**
This condition is also known as peptic ulcer disease; these are the painful ulcers that usually arise in duodenum.

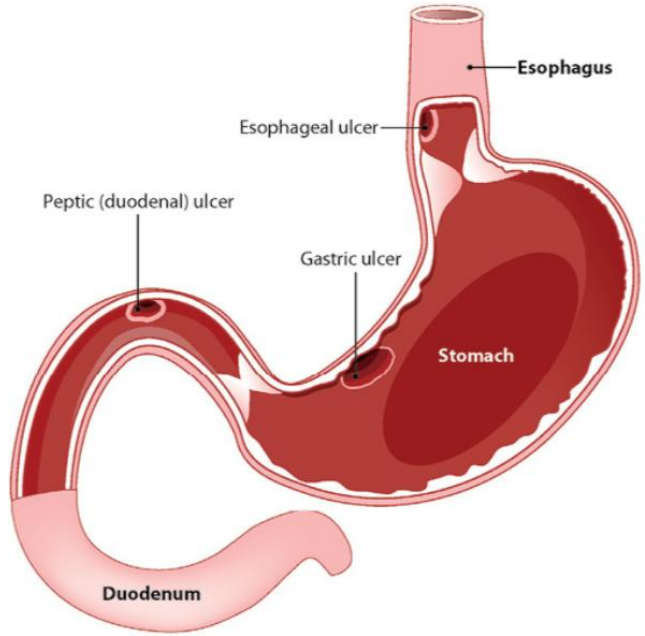

**Figure 11.j Peptic Ulcer**

**Volvulus**

This is a condition in which the bowel twists on itself, causing obstruction.

## Diseases of the digestive system (K00-K95)

Excludes *certain conditions originating in the perinatal period (P04-P96)*
*certain infectious and parasitic diseases (A00-B99)*
*complications of pregnancy, childbirth and the puerperium (O00-O9A)*
*congenital malformations, deformations and chromosomal abnormalities (Q00-Q99)*
*endocrine, nutritional and metabolic diseases (E00-E88)*
*injury, poisoning and certain other consequences of external causes (S00-T88)*
*neoplasms (C00-D49)*
*symptoms, signs and abnormal clinical and laboratory findings, not elsewhere classified (R00-R94)*

## Diseases of oral cavity and salivary glands (K00-K14)

4th K00 **Disorders of tooth development and eruption (Figure 11.1)**

EXCLUDES *embedded and impacted teeth (K01.-)*

K00.0 **Anodontia** CC/MCC Ex6

Hypodontia

Oligodontia

EXCLUDES *acquired absence of teeth (K08.1-)*

K00.1 **Supernumerary teeth** CC/MCC Ex6

Distomolar

Fourth molar

Mesiodens

Paramolar

Supplementary teeth

EXCLUDES *supernumerary roots (K00.2)*

K00.2 **Abnormalities of size and form of teeth** CC/MCC Ex6

Concrescence of teeth

Fusion of teeth

Gemination of teeth

Dens evaginatus

Dens in dente

Dens invaginatus

Enamel pearls

Macrodontia

Microdontia

Peg-shaped [conical] teeth

Supernumerary roots

Taurodontism

Tuberculum paramolare

EXCLUDES *abnormalities of teeth due to congenital syphilis (A50.5)*

*tuberculum Carabelli, which is regarded as a normal variation and should not be coded*

**K00.3 Mottled teeth** CC/MCC Ex0

Dental fluorosis
Mottling of enamel
Nonfluoride enamel opacities
EXCLUDES1 *deposits [accretions] on teeth (K03.6)*

**K00.4 Disturbances in tooth formation** CC/MCC Ex0

Aplasia and hypoplasia of cementum
Dilaceration of tooth
Enamel hypoplasia (neonatal) (postnatal) (prenatal)
Regional odontodysplasia
Turner's tooth
EXCLUDES1 *Hutchinson's teeth and mulberry molars in congenital syphilis (A50.5)*
EXCLUDES1 *mottled teeth (K00.3)*

**K00.5 Hereditary disturbances in tooth structure, not elsewhere classified** CC/MCC Ex0

Amelogenesis imperfecta
Dentinogenesis imperfecta
Odontogenesis imperfecta
Dentinal dysplasia
Shell teeth

**K00.6 Disturbances in tooth eruption** CC/MCC Ex0

Dentia praecox
Natal tooth
Neonatal tooth
Premature eruption of tooth
Premature shedding of primary [deciduous] tooth
Prenatal teeth
Retained [persistent] primary tooth
EXCLUDES1 *embedded and impacted teeth (K01.-)*

**K00.7 Teething syndrome** CC/MCC Ex0

**K00.8 Other disorders of tooth development** CC/MCC Ex0

Color changes during tooth formation
Intrinsic staining of teeth NOS
EXCLUDES1 *posteruptive color changes (K03.7)*

**K00.9 Disorder of tooth development, unspecified** CC/MCC Ex0

Disorder of odontogenesis NOS

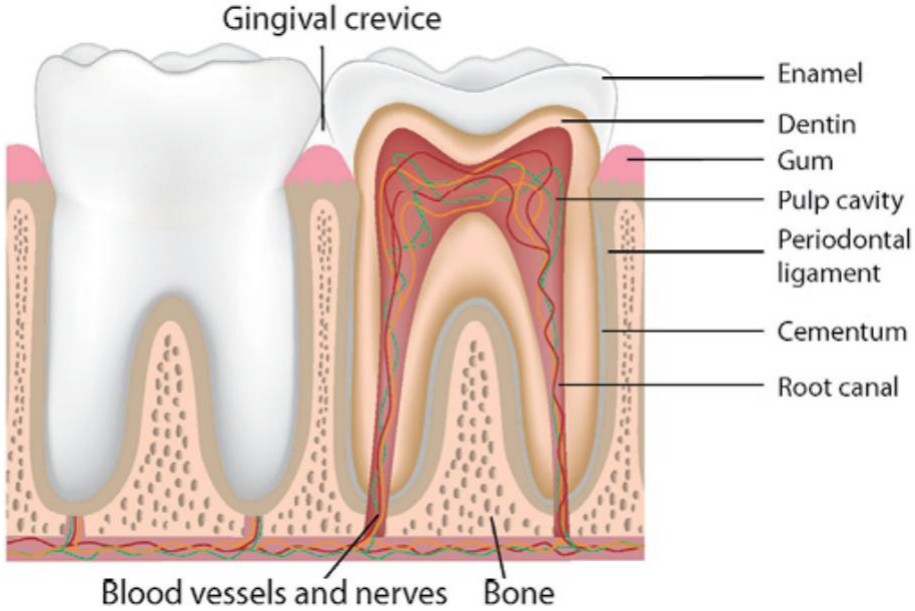

**Figure 11.1 Tooth Anatomy**

4th **K01 Embedded and impacted teeth**

EXCLUDES *abnormal position of fully erupted teeth (M26.3-)*

**K01.0 Embedded teeth** CC/MCC Ex0

**K01.1 Impacted teeth** CC/MCC Ex0

4th **K02 Dental caries**

**DEFINITION:** Dental caries means tooth decay or cavities.

INCLUDES *caries of dentine*
*dental cavities*
*early childhood caries*
*pre-eruptive caries*
*recurrent caries (dentino enamel junction) (enamel) (to the pulp)*
*tooth decay*

**K02.3 Arrested dental caries** CC/MCC Ex0

Arrested coronal and root caries

5th K02.5 **Dental caries on pit and fissure surface**

Dental caries on chewing surface of tooth

K02.51 **Dental caries on pit and fissure surface limited to enamel** CC/MCC Ex0

White spot lesions [initial caries] on pit and fissure surface of tooth

K02.52 **Dental caries on pit and fissure surface penetrating into dentin** CC/MCC Ex0

Primary dental caries, cervical origin

K02.53 **Dental caries on pit and fissure surface penetrating into pulp** CC/MCC Ex0

5th K02.6 **Dental caries on smooth surface**

K02.61 **Dental caries on smooth surface limited to enamel** CC/MCC Ex0

White spot lesions [initial caries] on smooth surface of tooth

K02.62 **Dental caries on smooth surface penetrating into dentin** CC/MCC Ex0

K02.63 **Dental caries on smooth surface penetrating into pulp** CC/MCC Ex0

K02.7 **Dental root caries** CC/MCC Ex0

K02.9 **Dental caries, unspecified** CC/MCC Ex0

4th K03 **Other diseases of hard tissues of teeth**

EXCLUDES *bruxism (F45.8)*

*dental caries (K02.-)*

*teeth-grinding NOS (F45.8)*

K03.0 **Excessive attrition of teeth** CC/MCC Ex0

Approximal wear of teeth

Occlusal wear of teeth

K03.1 **Abrasion of teeth** CC/MCC Ex0

Dentifrice abrasion of teeth

Habitual abrasion of teeth

Occupational abrasion of teeth

Ritual abrasion of teeth

Traditional abrasion of teeth

Wedge defect NOS

**K03.2 Erosion of teeth** CC/MCC Ex0

- Erosion of teeth due to diet
- Erosion of teeth due to drugs and medicaments
- Erosion of teeth due to persistent vomiting
- Erosion of teeth NOS
- Idiopathic erosion of teeth
- Occupational erosion of teeth

**K03.3 Pathological resorption of teeth** CC/MCC Ex0

- Internal granuloma of pulp
- Resorption of teeth (external)

**K03.4 Hypercementosis** CC/MCC Ex0

- Cementation hyperplasia

**K03.5 Ankylosis of teeth** CC/MCC Ex0

**K03.6 Deposits [accretions] on teeth** CC/MCC Ex0

- Betel deposits [accretions] on teeth
- Black deposits [accretions] on teeth
- Extrinsic staining of teeth NOS
- Green deposits [accretions] on teeth
- Materia alba deposits [accretions] on teeth
- Orange deposits [accretions] on teeth
- Staining of teeth NOS
- Subgingival dental calculus
- Supragingival dental calculus
- Tobacco deposits [accretions] on teeth

**K03.7 Posteruptive color changes of dental hard tissues** CC/MCC Ex0

Excludes1 *deposits [accretions] on teeth (K03.6)*

4th K04 **Diseases of pulp and periapical tissues**

5th K04.0 **Pulpitis**

Acute pulpitis

Chronic (hyperplastic) (ulcerative) pulpitis

K04.01 **Reversible pulpitis** CC CC/MCC Ex6

K04.02 **Irreversible pulpitis** CC CC/MCC Ex6

K04.1 **Necrosis of pulp** CC/MCC Ex6

Pulpal gangrene

K04.2 **Pulp degeneration** CC/MCC Ex6

Denticles

Pulpal calcifications

Pulpal stones

K04.3 **Abnormal hard tissue formation in pulp** CC/MCC Ex6

Secondary or irregular dentine

K04.4 **Acute apical periodontitis of pulpal origin** CC CC/MCC Ex6

Acute apical periodontitis NOS

EXCLUDES1 *acute periodontitis (K05.2-)*

K04.5 **Chronic apical periodontitis** CC/MCC Ex6

Apical or periapical granuloma

Apical periodontitis NOS

EXCLUDES1 *chronic periodontitis (K05.3-)*

K04.6 **Periapical abscess with sinus** CC/MCC Ex6

Dental abscess with sinus

Dentoalveolar abscess with sinus

K04.7 **Periapical abscess without sinus** CC/MCC Ex6

Dental abscess without sinus

Dentoalveolar abscess without sinus

K04.8 **Radicular cyst** CC/MCC Ex6

Apical (periodontal) cyst

Periapical cyst

Residual radicular cyst

EXCLUDES1 *lateral periodontal cyst (K09.0)*

5th K04.9 Other and unspecified diseases of pulp and periapical tissues

K04.90 Unspecified diseases of pulp and periapical tissues CC/MCC Ex0

K04.99 Other diseases of pulp and periapical tissues CC/MCC Ex0

4th K05 Gingivitis and periodontal diseases

Use additional code to identify:

alcohol abuse and dependence (F10.-)

exposure to environmental tobacco smoke (Z77.22)

exposure to tobacco smoke in the perinatal period (P96.81)

history of tobacco dependence (Z87.891)

occupational exposure to environmental tobacco smoke (Z57.31)

tobacco dependence (F17.-)

tobacco use (Z72.0)

5th K05.0 Acute gingivitis

EXCLUDES1 *acute necrotizing ulcerative gingivitis (A69.1)*

*herpesviral [herpes simplex] gingivostomatitis (B00.2)*

K05.00 Acute gingivitis, plaque induced CC/MCC Ex0

Acute gingivitis NOS

Plaque induced gingival disease

K05.01 Acute gingivitis, non-plaque induced CC/MCC Ex0

5th K05.1 Chronic gingivitis

Desquamative gingivitis (chronic)

Gingivitis (chronic) NOS

Hyperplastic gingivitis (chronic)

Pregnancy associated gingivitis

Simple marginal gingivitis (chronic)

Ulcerative gingivitis (chronic)

Gingival fibromatosis

K06.2 **Gingival and edentulous alveolar ridge lesions associated with trauma** CC/MCC Ex0

Irritative hyperplasia of edentulous ridge [denture hyperplasia]

**Use additional** code (Chapter 20) to identify external cause or denture status (Z97.2)

K06.3 **Horizontal alveolar bone loss** CC/MCC Ex0

K06.8 **Other specified disorders of gingiva and edentulous alveolar ridge** CC/MCC Ex0

Fibrous epulis

Flabby alveolar ridge

Giant cell epulis

Peripheral giant cell granuloma of gingiva

Pyogenic granuloma of gingiva

Vertical ridge deficiency

Excludes *gingival cyst (K09.0)*

K06.9 **Disorder of gingiva and edentulous alveolar ridge, unspecified** CC/MCC Ex0

4th K08 **Other disorders of teeth and supporting structures**

Excludes *dentofacial anomalies [including malocclusion] (M26.-)*

*disorders of jaw (M27.-)*

K08.0 **Exfoliation of teeth due to systemic causes** CC/MCC Ex0

**Code also** underlying systemic condition

5th K08.1 **Complete loss of teeth**

Acquired loss of teeth, complete

EXCLUDES1 *congenital absence of teeth (K00.0)*

*exfoliation of teeth due to systemic causes (K08.0)*

*partial loss of teeth (K08.4-)*

4th K09 **Cysts of oral region, not elsewhere classified**

INCLUDES *lesions showing histological features both of aneurysmal cyst and of another fibro-osseous lesion*

EXCLUDES *cysts of jaw (M27.0-, M27.4-)*
*radicular cyst (K04.8)*

K09.0 **Developmental odontogenic cysts**

Dentigerous cyst
Eruption cyst
Follicular cyst
Gingival cyst
Lateral periodontal cyst
Primordial cyst

EXCLUDES *keratocysts (D16.4, D16.5)*
*odontogenic keratocystic tumors (D16.4, D16.5)*

K09.1 **Developmental (nonodontogenic) cysts of oral region**

Cyst (of) incisive canal
Cyst (of) palatine of papilla
Globulomaxillary cyst
Median palatal cyst
Nasoalveolar cyst
Nasolabial cyst
Nasopalatine duct cyst

## Hernia (K40-K46)

NOTES Hernia with both gangrene and obstruction is classified to hernia with gangrene.

INCLUDES *acquired hernia*
*congenital [except diaphragmatic or hiatus] hernia*
*recurrent hernia*

4th K40 Inguinal **hernia**

INCLUDES *bubonocele*
*direct inguinal hernia*
*double inguinal hernia*
*indirect inguinal hernia*
*inguinal hernia NOS*
*oblique inguinal hernia*
*scrotal hernia*

5th K40.0 Bilateral **inguinal hernia, with obstruction, without gangrene**

Inguinal hernia (bilateral) causing obstruction without gangrene
Incarcerated inguinal hernia (bilateral) without gangrene
Irreducible inguinal hernia (bilateral) without gangrene
Strangulated inguinal hernia (bilateral) without gangrene

K40.00 **Bilateral inguinal hernia, with obstruction, without gangrene, not specified as recurrent** CC CC/MCC Ex0

Bilateral inguinal hernia, with obstruction, without gangrene NOS

K40.01 **Bilateral inguinal hernia, with obstruction, without gangrene, recurrent** CC CC/MCC Ex0

# Chapter 12: Diseases of the Skin and Subcutaneous Tissue (L00-L99)

## Chapter-Specific Coding Guidelines

**I.C.12. Chapter 12: Diseases of the Skin and Subcutaneous Tissue (L00-L99)**

**a. Pressure ulcer stage codes**

**1) Pressure ulcer stages**

Codes in category L89, Pressure ulcer, identify the site and stage of the pressure ulcer.
The ICD-10-CM classifies pressure ulcer stages based on severity, which is designated by stages 1-4, deep tissue pressure injury, unspecified stage, and unstageable.
Assign as many codes from category L89 as needed to identify all the pressure ulcers the patient has, if applicable.
*See Section I.B.14. for pressure ulcer stage documentation by clinicians other than patient's provider.*

**2) Unstageable pressure ulcers**

Assignment of the code for unstageable pressure ulcer (L89.--0) should be based on the clinical documentation. These codes are used for pressure ulcers whose stage cannot be clinically determined (e.g., the ulcer is covered by eschar or has been treated with a skin or muscle graft). This code should not be confused with the codes for unspecified stage (L89.--9). When there is no documentation regarding the stage of the pressure ulcer, assign the appropriate code for unspecified stage (L89.-- 9).
If during an encounter, the stage of an unstageable pressure ulcer is revealed after debridement, assign only the code for the stage revealed following debridement.

**3) Documented pressure ulcer stage**

Assignment of the pressure ulcer stage code should be guided by clinical documentation of the stage or documentation of the terms found in the Alphabetic Index. For clinical terms describing the stage that are not found in the Alphabetic Index, and there is no documentation of the stage, the provider should be queried.

**4) Patients admitted with pressure ulcers documented as healed**

No code is assigned if the documentation states that the pressure ulcer is completely healed at the time of admission.

**5) Pressure ulcers documented as healing**

Pressure ulcers described as healing should be assigned the appropriate pressure ulcer stage code based on the documentation in the medical record. If the documentation does not provide information about the stage of the healing pressure ulcer, assign the appropriate code for unspecified stage.
If the documentation is unclear as to whether the patient has a current (new) pressure ulcer or if the patient is being treated for a healing pressure ulcer, query the provider.
For ulcers that were present on admission but healed at the time of discharge, assign the code for the site and stage of the pressure ulcer at the time of admission.

**6) Patient admitted with pressure ulcer evolving into another stage during the admission**

If a patient is admitted to an inpatient hospital with a pressure ulcer at one stage and it progresses to a higher stage, two separate codes should be assigned: one code for the site and stage of the ulcer on admission and a second code for the same ulcer site and the highest stage reported during the stay.

**7) Pressure-induced deep tissue damage**

For pressure-induced deep tissue damage or deep tissue pressure injury, assign only the appropriate code for pressure-induced deep tissue damage (L89.--6).

**b. Non-Pressure Chronic Ulcers**

**1) Patients admitted with non-pressure ulcers documented as healed**

No code is assigned if the documentation states that the non-pressure ulcer is completely healed at the time of admission.

**2) Non-pressure ulcers documented as healing**

Non-pressure ulcers described as healing should be assigned the appropriate non-pressure ulcer code based on the documentation in the medical record. If the documentation does not provide information about the severity of the healing non-pressure ulcer, assign the appropriate code for unspecified severity.
If the documentation is unclear as to whether the patient has a current (new) non-pressure ulcer or if the patient is being treated for a healing non-pressure ulcer, query the provider.
For ulcers that were present on admission but healed at the time of discharge, assign the code for the site and severity of the non- pressure ulcer at the time of admission.

**3) Patient admitted with non-pressure ulcer that progresses to another severity level during the admission**

If a patient is admitted to an inpatient hospital with a non- pressure ulcer at one severity level and it progresses to a higher severity level, two separate codes should be assigned: one code for the site and severity level of the ulcer on admission and a second code for the same ulcer site and the highest severity level reported during the stay.
*See Section I.B.14. for pressure ulcer stage documentation by clinicians other than patient's provider*

# Anatomy of the Integumentary System

## Introduction

The integumentary system (Figure 12.a) is composed of the common integument (or skin) and its appendages. The skin covers the body and proves to be an effective barrier to most harmful chemicals that can cause damage to our internal body system. It contains the peripheral endings of various sensory nerves and plays an important role in the regulation of our body temperature. The various layers/components of the skin (from outside to inside) are listed below:

1. **The Epidermis (Figure 12.b)**
   a) Stratum Corneum
   b) Stratum Lucidum
   c) Stratum Granulosum
   d) Stratum Spinosum
   e) Stratum Germinativum (or Basal Layer/Stratum Basale)

2. **The Dermis (or Corium)**
   a) Papillary Layer of Dermis
   b) Reticular Layer of Dermis

3. **The Subcutaneous Tissue/Superficial Fascia (or Hypodermis)**

4. **The Appendages of the Skin**
   a) Hair (for protection and sensation)
   b) Nails (for protection)
   c) Sebaceous Glands (or the glands that secrete sebum onto hair follicle)
   d) Sweat Glands (or the glands that secrete sweat) and ducts
      i) eccrine sweat glands (or the glands secreting sweat with faint odor)
      ii) apocrine sweat glands (or the glands secreting sweat with strong odor)
   e) Arrector Pili (or smooth muscles that pull hairs straight)

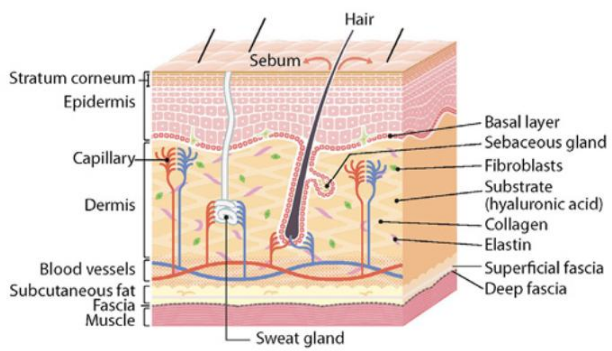

**Figure 12.a Integumentary System Anatomy**

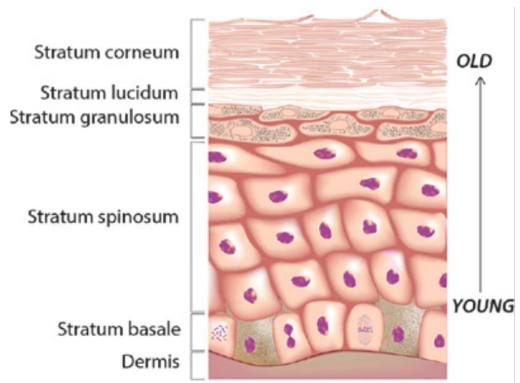

**Figure 12.b Structure of the Epidermis**

5. **The Function of the Epidermis**
   a) Skin hydration by holding in water
   b) Produces new skin cells
   c) Protects the body from pathogens, chemicals and UV light
   d) Provides skin coloration with melanocytes

6. **The Function of the Dermis**
   a) Supports the epidermis
   b) Nerve endings provide the sense of feel
   c) Produces sweat to control body temperature
   c) Moisturizes skin though sebaceous glands
   d) Produces hair from hair follicles located within

**7. The Function of the Hypodermis**
   a) Connects the dermis to muscle and bone
   b) Insulates the body from cold temperatures
   c) Protects the body from hot temperature by producing sweat
   d) Acts as a shock absorber to protect muscles and bone
   e) Stores energy in the form of fat cells

# Common Pathologies

**Cellulitis**

It is a noncontiguous inflammation of the skin and deeper tissues. It causes diffuse inflammation of connective tissue with severe inflammation of dermal and subcutaneous layers of the skin. Skin in the infected area will become red, hot, irritated and painful. Group A strep (streptococcal) bacteria are the most common cause of cellulitis.

**Impetigo**

Impetigo is a highly contagious skin infection which causes sores and blisters. This contagious superficial skin infection is generally caused by one of two bacteria: Staphylococcus aureus or Streptococcus pyogenes. Symptoms start with red or pimple-like sores surrounded by red skin.

**Folliculitis**

It is the infection and inflammation of one or more hair follicles. It usually is caused by bacteria. It can occur anywhere on the skin. Numerous smooth little red bumps form around hair follicles and are most commonly seen on the chest, back, buttocks and legs.

**Acne**

Acne vulgaris (Figure 12.c) is a common human skin disease. Human skin has pores which connect to oil glands located under the skin. A small hair grows through the follicle out of the skin. Pimples form when hair follicles under the skin clog up. Acne lesions heal slowly, and when one begins to resolve, others seem to crop up.

**Figure 12.c Acne Vulgaris of the Face**

**Herpes Simplex (Figure 12.d)**

Herpes is an infection that is caused by a herpes simplex virus (HSV). Oral herpes is the most common form of infection followed by genital herpes. Main symptoms of herpes are tingling, itching and burning.

**Figure 12.d Herpes Simplex of the Upper Lip**

**Verrucae**

A verruca is a type of wart that is found on the soles of your feet, though they can also appear around the toes. Warts are rough lumps that often develop on the skin of the hands and feet. It is a small growth on the sole of the foot often with tiny black dots on the surface.

**Scabies**

Scabies is a contagious and itchy skin infection caused by the mite Sarcoptes scabiei. The mite is a tiny and usually not directly visible parasite which burrows under the patient's skin, causing intense allergic itching. Direct skin-to-skin contact is the mode of transmission. Scabies can also be spread by sharing towels, bed sheets, and other personal belongings. Scabies causes severe itching that is usually worse at night and a rash with tiny blisters. It spreads quickly in crowded conditions.

**Ringworm**

Ringworm is a type of fungal skin infection which is caused by fungi called tinea. It is a common highly contagious skin infection that causes a ring-like red rash on the skin. The rash can appear almost anywhere on the body, with the scalp, feet and groin being most common sites.

**Chicken Pox**

Chicken pox is a viral infection in which extremely itchy blisters develop all over the body. It is a highly contagious disease caused by primary infection with varicella zoster virus. The classic symptoms of this disease are an uncomfortable itchy rash, fever, headache, tiredness and loss of appetite. The rash turns into fluid-filled blisters and eventually into scabs. It usually shows up on the face, chest, and back and then spreads to the rest of the body. If the virus becomes active again, it can cause a painful infection called shingles.

**Psoriasis (Figure 12.e)**

Psoriasis is a chronic skin problem that causes skin cells to grow too quickly, resulting in thick, white, silvery patches of skin. This occurs when the immune system mistakenly attacks and destroys healthy body tissue. Bacteria or viral infections, stress, dry air, injury to the skin and some medicines may trigger the condition. It is a noncontagious skin condition that produces red papules that merge together into plaques of thickened scaling skin. Psoriasis commonly affects the skin of the elbows, knees, and scalp. Psoriasis symptoms improve or can go into remission.

# Chapter 13: Diseases of the Musculoskeletal System and Connective Tissue (M00-M99)

## Chapter-Specific Coding Guidelines

**I.C.13. Chapter 13:Diseases of the Musculoskeletal System and Connective Tissue (M00-M99)**

**a. Site and laterality**

Most of the codes within Chapter 13 have site and laterality designations. The site represents the bone, joint or the muscle involved.

**1) Bone versus joint**

For certain conditions, the bone may be affected at the upper or lower end, (e.g., avascular necrosis of bone, M87, Osteoporosis, M80, M81). Though the portion of the bone affected may be at the joint, the site designation will be the bone, not the joint.

**2)** *Multiple sites*

**Codes describing specified sites are assigned individually by site when documented. When the specified site(s) are not documented, assign the appropriate code for "multiple sites."**

**b. Acute traumatic versus chronic or recurrent musculoskeletal conditions**

Many musculoskeletal conditions are a result of previous injury or trauma to a site, or are recurrent conditions. Bone, joint or muscle conditions that are the result of a healed injury are usually found in chapter 13. Recurrent bone, joint or muscle conditions are also usually found in chapter 13. Any current, acute injury should be coded to the appropriate injury code from chapter 19. Chronic or recurrent conditions should generally be coded with a code from chapter 13. If it is difficult to determine from the documentation in the record which code is best to describe a condition, query the provider.

**c. Coding of Pathologic Fractures**

7th character A is for use as long as the patient is receiving active treatment for the fracture. While the patient may be seen by a new or different provider over the course of treatment for a pathological fracture, assignment of the 7th character is based on whether the patient is undergoing active treatment and not whether the provider is seeing the patient for the first time.

7th character D is to be used for encounters after the patient has completed active treatment for the fracture and is receiving routine care for the fracture during the healing or recovery phase. The other 7th characters, listed under each subcategory in the Tabular List, are to be used for subsequent encounters for treatment of problems associated with the healing, such as malunions, nonunions, and sequelae.

Care for complications of surgical treatment for fracture repairs during the healing or recovery phase should be coded with the appropriate complication codes.

*See Section I.C.19. Coding of traumatic fractures.*

**d. Osteoporosis**

Osteoporosis is a systemic condition, meaning that all bones of the musculoskeletal system are affected. Therefore, site is not a component of the codes under category M81, Osteoporosis without current pathological fracture. The site codes under category M80, Osteoporosis with current pathological fracture, identify the site of the fracture, not the osteoporosis.

**1) Osteoporosis without pathological fracture**

Category M81, Osteoporosis without current pathological fracture, is for use for patients with osteoporosis who do not currently have a pathologic fracture due to the osteoporosis, even if they have had a fracture in the past. For patients with a history of osteoporosis fractures, status code Z87.310, Personal history of (healed) osteoporosis fracture, should follow the code from M81.

**2) Osteoporosis with current pathological fracture**

Category M80, Osteoporosis with current pathological fracture, is for patients who have a current pathologic fracture at the time of an encounter. The codes under M80 identify the site of the fracture. A code from category M80, not a traumatic fracture code, should be used for any patient with known osteoporosis who suffers a fracture, even if the patient had a minor fall or trauma, if that fall or trauma would not usually break a normal, healthy bone.

**e. Multisystem Inflammatory Syndrome**

*See Section I.C.1.g.1.l. for Multisystem Inflammatory Syndrome*

# Anatomy of the Musculoskeletal System

## Introduction

Osteology (Osteo: bone; logy: study) is the branch of anatomy that deals with the detailed analysis of structure, function and diseases of the skeletal elements. It constitutes the bony framework of the body. The human bony skeleton is composed of the below mentioned components (and is derived from the mesoderm, which is the primary germ cell layer).

| Skeletal Region | Body Structure | Quantity of bones |
|---|---|---|
| Axial Skeleton (the trunk) | Skull | 22 |
| | Hyoid Bone | 1 |
| | Ribs & Sternum | 25 |
| | Vertebral Column | 26 |
| Appendicular Skeleton (the limbs) | Upper Extremities | 64 |
| | Lower Extremities | 62 |
| Auditory Ossicles | | 6 |

### 1. Structure of a Normal Human Bone

Bone is comprised of a rigid structure, which is based on dense connective tissue. A normal human bone is made up of the following essential macro and micro elements:

a) Periosteum
b) Medullary Membrane
c) Marrow
d) Blood Vessels and Nerves of Bone
e) Haversian Canals (Canals of Havers)
f) Lamellae
g) Lacunae
h) Canaliculi
i) Perichondrium
j) Osteoblasts
k) Osteoclasts
l) Medullary spaces
m) Epiphysis
n) Diaphysis
o) Metaphysis

## 2. The Vertebral Column

The vertebral column is composed of a continuous series of compact bones that articulate with each other via intervertebral discs, and are called vertebrae. The structure forms the dorsal aspect of the trunk. The vertebral column is also called spine. The spinal cord traverses through the spinal canal of the vertebral column. The individual vertebrae remain connected together by intervertebral discs. The cervical, thoracic, and lumbar vertebrae are termed true vertebrae. However, sacral and coccygeal ones are false vertebrae. The concept behind considering them as true or false is based on mobility of the individual vertebrae through intervertebral discs. Cervical, thoracic and lumbar vertebrae are moveable to some extent and therefore termed as true vertebral bodies. In contrast, the sacral-coccygeal section is rather fixed and thus not categorized as true vertebrae. Each vertebral segment is associated with a portion of spinal cord, which travels the entire vertebral column, and each spinal cord segment has specific physiology and functions. The vertebral bodies communicate with each other through the pads of elastic fibro-cartilage. These flexible pads constitute the intervertebral discs, which help in the movement of vertebral bodies and provide protection from trauma or shocks. However, the length of the adult vertebral column ranges from 60-70 cm. The entire vertebral column is based on a total of 33 vertebrae that are categorized in accordance with the occupied region.

a) **Cervical Vertebrae**
These are small and delicate bones, which are marked by the existence of a foramen in every transverse process. The cervical region is based on the seven cervical bones (C1-C7). However, the first cervical vertebra is known as Atlas and the second one is Axis.

b) **Thoracic Vertebrae**
Thoracic vertebrae are 12 in quantity (T1–T12), and communicate with the head (tubercles) of ribs in the thoracic region through articular facets of the transverse processes. Their body structure is similar to the shape of the heart, with nearly circular vertebral foramina.

c) **Lumbar Vertebrae**
These are five vertebrae (L1-L5), with kidney shaped bodies. Lumbar vertebrae are in fact the most toughest and robust in configuration. These are enlarged in size and marked by the absence of a transverse process foramen and vertebral facets. They are true vertebrae, thereby allowing flexion and extension movements via flexible intervertebral discs. Their broad lamellae, large bodies, long transverse processes, and strong pedicles make them suitable to support additional body weight as compared to other similar vertebrae.

d) **Sacral Vertebrae**
These are five vertebral bodies (S1-S5), which constitute a portion of the pelvic cavity. Sacral vertebral bodies consist of five separate segments that get fused together at maturity. As a matter of fact, these vertebrae lack intervertebral discs, which restrict their mobility and put them into the category of false vertebrae.

e) **Coccygeal Vertebrae**
The four coccygeal vertebrae constitute the human vestigial tail bone, in which vertebral bodies are fused together without the existence of any intervertebral disc. Movement of the individual vertebral bodies is restricted due to their interfusion. Hence, these are considered as false vertebrae. The number of bones in the coccygeal region may rarely vary between three to five vertebrae, in few individuals.

## 3. Thorax

The part of the trunk situated between the neck and abdomen constitutes the thorax. The thoracic cavity is bounded by ribs, sternum, costal cartilages, and the thoracic vertebrae. The thorax is also known as the chest region. The osseocartilaginous cage of the thorax covers and protects the prime organs of circulation and respiration. Furthermore, this osseocartilaginous cage is composed mainly of the ribcage, shoulder girdle, and spine.

The 12 thoracic vertebrae and certain component of the ribs constitute the posterior (back) wall of the thoracic cavity. However, the anterior (front) region is composed of sternum and the costal cartilages. The entire human chest (thorax) region contains multiple organs, muscles, bones, vasculature, internal and external structures. These contents include heart, lungs, thymus, pectoral muscles, scapula, sternum, ribs, aorta, trachea, diaphragm, and mammary glands etc.

**4. Sternum (Chest or Breast Bone)**

a) The sternum is a flat and long bone situated in the center of the thorax and forms the midline of the anterior thoracic cage. It articulates with both clavicles (collar bones) through its upper ends. It is composed of the following three (interfused) components:
   i) manubrium
   ii) body (gladiolus/corpus sterni)
   iii) xiphoid process (processus xiphoideus/ensiform or xiphoid appendix) ribs.

b) Ribs are the elongated, flattened, lightweight, resilient, and twisted bones that are the essential constituent of the thoracic skeleton. The total number of ribs in the human body is 24 (12 on each side). The ribs can be classified as follows:
   i) True ribs-These are also called vertebrosternal ribs. True ribs comprise the first seven ribs that communicate (to the dorsum) with the vertebral column as well as sternum (in front) via costal cartilages.
   ii) False ribs-These are also called vertebrochondral ribs. False ribs comprise the eighth, ninth, and tenth ribs that are indirectly attached to the sternum through costal cartilages. The individual cartilages of each of these ribs are connected to the cartilage of the rib lying just above them.
   iii) Floating ribs-These are also termed vertebral ribs. These ribs include the 11th and 12th ribs that are free at their anterior extremities (without any attachment with the sternum) and are connected to the vertebral bodies on their dorsal ends.

**5. The Skull**

The human skull is based on the skeleton of the head. Several bones of the skull integrate together to form the cranium (or the skull). The skull can be categorized as follows:

a) **The Brain Box or Brain Case (The Calvaria)**
The brain box constitutes the upper cranium and contains the brain.

b) **The Facial Skeleton**
The facial skeleton comprises the portion of skull (other than the brain box) and includes the mandible bone of the face.

**The Composition of Human Skull**

| The Calvaria | |
|---|---|
| Paired Bones | Unpaired Bones |
| i) Parietal<br>ii) Temporal | i) Frontal<br>ii) Occipital<br>iii) Sphenoid<br>iv) Ethmoid |
| **The Facial Skeleton** | |
| Paired Bones | Unpaired Bones |
| i) Maxilla<br>ii) Zygomatic<br>iii) Nasal<br>iv) Lacrimal<br>v) Palatine<br>vi) Inferior Nasal Concha | i) Mandible<br>ii) Vomer |

c) **The Facial Bones**

The facial skeleton comprises the lower and anterior portion of the human skull and includes the following bones:

i) nasal bones
ii) maxillae (upper jaw)
iii) lacrimal bone
iv) zygomatic bone
v) palatine bone
vi) inferior nasal concha
vii) vomer
viii) mandible (lower jaw)
ix) hyoid bone

**6. The Bones of the Upper Extremity**

a) **Clavicle**

The clavicle is also called the collar bone that forms the anterior portion of the shoulder girdle. The clavicles are two in number and called the right and left clavicles.

b) **Scapula**

The scapula is also called the shoulder blade and constitutes the back portion of the shoulder girdle. It is a flat bone that articulates with the clavicle and humerus. It also contains a triangular process that projects laterally and is called the acromion. Additionally, the upper part of the neck of the scapula contains a curved process, which is known as the coracoid process. The scapulae are two in number (right and left scapula).

c) **Humerus**

The humerus is the long bone of the arm that begins from the shoulder and ends up at the elbow. It is the largest bone of the upper extremity and consists of the following major components:

i) greater tubercle (greater tuberosity)
ii) lesser tubercle (lesser tuberosity)
iii) body or shaft (corpus humeri)
iv) anterior, lateral, and medial borders
v) medial and lateral epicondyles
vi) radial sulcus (musculospiral groove)
vii) lateral and medial supracondylar ridges
viii) deltoid tuberosity.

d) **Ulna**

The ulna is one of the two long and prismatic bones of the forearm that extends parallel with the radius. The ulna possesses a body and two extremities. The proximal or upper extremity contains olecranon and coronoid processes, and the semilunar and radial notches respectively. The body or shaft of the ulna is also known as the corpus ulnae. The lower or distal extremity is comprised of an articular eminence (the head of the ulna) and a nonarticular eminence (the styloid process).

e) **Radius**

The radius is one of the two long bones of the forearm that extends laterally with the ulna. Its lower end participates in the formation of the wrist joint and upper end helps to create the elbow joint. The upper or proximal extremity consists of a head, neck, and tuberosity. The body or shaft is also known as the corpus radii. The lateral surface of the lower extremity contains a conical projection, which is known as the styloid process.

f) **Carpus**

The carpus region of the hand contains the carpal bones, which consist of a total of eight bones positioned in proximal and distal rows to facilitate uninterrupted movement of the wrist joint. The carpal bones of the proximal row are: navicular, lunate, triangular, and pisiform. The bones of the distal row are: greater multangular, lesser multangular, capitate, and hamate.

g) **Metacarpus**

The metacarpus region of hand is based on cylindrical (metacarpal) bones that are five in number and constitute the intermediary portion of the bony skeleton of hand. The first through fifth metacarpal bones belong to the thumb, index, middle, ring and little fingers respectively.

h) **Phalanges of the Hand**

The phalanges (finger bones) of the hand constitute the fingers. These are 14 in number. Each finger consists of three phalanges. However, the thumb consists of only two phalanges. A single finger bone has a body, with two extremities. The finger bones serve to facilitate the basic functions of the hand, like-effective grasping of objects and writing, etc.

**7. The Bones of the Lower Extremity**

a) **Hip Bone**

The hip bone is also known as the coxal bone. It's based on three components: ilium, ischium, and pubis. The ilium holds the flank. It is the broad portion situated on top of the large cup-shaped articular cavity, the acetabulum. The ischium forms the lower back part of the hip bone that facilitates sitting. It's located downward from the acetabulum and is the strongest component of the hip bone, containing an enlarged opening, the obturator foramen. The pubis is the lower frontal portion of the hip bone, which is located medially below the acetabulum. It supports the internal organs of reproduction. The angle across the pubic symphysis is known as the pubic arch.

b) **Pelvis**

The pelvis consists of a bony ring that provides a connecting medium between the vertebral column and femurs. It is based on the following 4 bones:

i) The hip bones are two in number.
ii) The sacrum-The fused vertebrae that are five in number and connected to the hip bones.
iii) The coccyx-The fused vertebrae that are four in number and constitute the tailbone.

The space surrounded by the pelvic girdle is known as the pelvic cavity. The pelvic girdle bears the entire weight of the trunk and upper body while sitting and transfers this weight to the lower limbs during standing, walking, or running.

c) **Femur**

The femur is one of the two largest, longest, and strongest bones in the human skeleton that bears the load of the upper body via the pelvis in standing, walking, or running. It also participates in the formation of the hip and knee joints. The components of a normal femur bone are as follows:

The Upper (Proximal) Extremity consists of the following elements:

i) Head
ii) Neck
iii) Greater Trochanter
iv) Lesser Trochanter

The Body or Shaft-The body is cylindrical in shape, lies between the upper and lower extremities and is also known as corpus femoris.

The Lower (Distal) Extremity -The distal extremity is based on two projections (the lateral and medial condyles). These projections (condyles) are separated in front by an articular depression, known as the patellar surface. The same condyles are further interrupted from behind by a deep pit, which is termed as the intercondyloid fossa.

d) **Patella**

The knee cap (patella) is a flat, thick, circular-triangular, and dense cancellous articular bone that is situated on the frontal portion of the knee joint. The superior border is thick and forms the base of patella. The patella is further marked by medial and lateral borders. The apex of patella is a pointed region that provides attachment to the patellar ligament. The patella articulates with the femur through the patellofemoral joint.

e) **Tibia**

The tibia (shin bone) is located medially in the lower leg and is regarded as the largest and strongest bone of the skeleton after the femur. It also participates in the formation of the knee and ankle joints. The tibia is composed of the following elements:

i) upper (proximal) end – The proximal extremity is composed of the projections, which are known as the medial and lateral condyles. The condylar surfaces further merge to form an eminence on the frontal side, which is known as the tibial tuberosity.
ii) body or shaft of tibia – The shaft of the tibia is also known as corpus tibiae and contains the anterior crest (or border), the medial border, and the interosseous crest (or lateral border).
iii) lower (distal) end – The distal extremity contains the inferior articular surface, the anterior surface, the posterior surface, the lateral surface, and the medial surface. However, the medial surface extends medially to form a pyramidal process, which is termed as the medial malleolus.

f) **Fibula**

The fibula (calf bone) is located laterally in the lower leg and runs laterally with the adjacent shin bone (tibia). It's a thin and slender bone which is composed of a body with upper and lower extremities. The lower or distal extremity constitutes the lateral malleolus, which is also known as the external malleolus or malleolus lateralis.

g) **Tarsus**

The tarsus region of foot is based on the following seven tarsal bones:

i) calcaneus
ii) talus
iii) cuboid
iv) navicular
v) three cuneiforms

h) **Phalanges of the Foot**

The phalanges of the foot constitute the region of forefoot. These are also known as the toe bones. The great toe (hallux) contains two phalanges (proximal and distal). The proximal and distal phalangeal bones of the great toe articulate with each other to form the first interphalangeal joint. The proximal phalanges of the other toes articulate with their respective metatarsal heads to form the metatarsophalangeal joints.

**8. Syndesmology (The Articulations or Joints)**

Syndesmology is defined as the branch of anatomy that deals with the joints and their components (including ligaments). The junctions of bones, where multiple parts of the individual bones connect together, are called articulations or joints. These articulations are further supported by sheets of tough fibrous tissue that connect the joint bones together and are termed ligaments. Various components of the joints are listed below:

a) **Bones**
b) **Cartilages**

The cartilages are flexible nonvascular structures composed of connective tissue and found mainly in joints. A cartilage can be categorized into the following elements:

i) Hyaline cartilage
ii) White fibrocartilage

The white fibrocartilage can further be categorized into four subcategories:

a) interarticular fibrocartilage
b) connecting fibrocartilage
c) circumferential fibrocartilage
d) stratiform fibrocartilage

iii) Yellow or elastic fibrocartilage

c) **Articular Capsule**

The articular capsule is also known as the joint capsule that completely covers and protects the freely movable (synovial) joints.

d) **Mucous Sheaths**

The mucous sheaths cover a part of the fibroosseous canals and surface of the tendons that glide upon these canals to facilitate the movement of these tendons on their respective canals.

**9. Classification of Joints**

The joints can be classified into the following three classes:

a) Synarthroses (Immovable Joints)
b) Amphiarthroses (Slightly Movable Joints)
c) Diarthroses (Freely Movable Joints)

**10. Joints of the Trunk**

a) **Joints between Vertebral Bodies**
The articulations between the individual vertebral bodies are based on the amphiarthrodial (slightly movable) intervertebral joints that possess only a very slight degree of mobility.

b) **Joints between Vertebral Arches**
The articulations between the individual vertebral arches are carried out through the two pairs of articular processes. The articular processes of a typical vertebral arch connect together with the articular processes of the adjacent vertebral arch to form true diarthrosis of arthrodial variety.

c) **Joints of the Atlas with the Axis**
The atlas forms three diarthroses with the axis. Moreover, the articulations of the axis with the atlas are known as the Atlantoaxial articulations.

d) **Joints of the Vertebral Column with the Cranium**
The atlas forms two articulations (known as diarthrosis) with the occipital bone. The occipital condyles interact with the articular surfaces of the atlas to constitute diarthroses. The synovial stratum covers the articular capsules around the condyles of the occipital bone.

e) **Joints of the Mandible**
The temporomandibular articulation forms an arthrodial diarthrosis. The temporal mandibular fossa and mandibular condyle interact together to constitute the temporomandibular articulation.

f) **Joints of the Ribs with the Vertebrae**
The head and tubercle of a typical rib articulates with the vertebral column to form a costovertebral articulation.

g) **Joints of the Vertebral Column with the Pelvis**
The fifth lumbar vertebra connects with the sacrum to form the lumbosacral articulation. The inner lip of the iliac crest connects with the transverse processes of the fifth lumbar vertebra through iliolumbar ligament.

h) **Joints of the Pelvis**
The articulations of the pelvis are mainly based on the following types of joints:

i) symphysis pubis
The two pubic bones articulate with each other to constitute a joint, which is known as the symphysis pubis.

ii) sacroiliac articulation
The auricular surfaces of sacrum and ilium connect with each other to form an amphiarthrodial joint, which is termed as the sacroiliac articulation.

iii) sacrococcygeal symphysis
The apex of the sacrum and base of the coccyx articulate with each other to form an amphiarthrodial joint, which is known as the sacrococcygeal symphysis.

## 11. Joints of Upper Extremity

a) **The Acromioclavicular Joint**
The medial aspect of the acromion (of the scapula) connects with the acromial end of the clavicle to constitute the acromioclavicular articulation. However, this type of joint is categorized as an arthrodial diarthrosis.

b) **The Shoulder Joint**
The humeral articulation constitutes the shoulder joint, which is an enarthrodial (ball and socket) joint and considered as the largest joint of the upper limb. The shoulder joint offers an extended range of movement and is composed of the articular head of humerus and the shallow glenoid cavity of the scapula. The ligaments of the shoulder joint include the articular capsule (capsular ligament), glenoid labrum (glenoid ligament) as well as the glenohumeral, coracohumeral, and transverse humeral ligaments.

c) **The Elbow Joint**
The elbow articulation falls under the category of hinge joint (ginglymus diarthrosis). The elbow joint performs the flexion and extension movements around a transversely placed single axis. The elbow joint consists of the humerus, ulna, and radius bones. An elbow joint is formed when the trochlea of humerus connects with the semilunar notch of ulna and the capitulum of humerus interacts with the cup (shallow-depression or fovea) on the proximal aspect of the head of the radius. The articular surfaces of the elbow joint are enclosed by and interact with each other through a well-defined articular capsule.

d) **The Radioulnar Joint**
The radioulnar joint is based on two articulations positioned at the proximal and distal ends of the radius and ulna. These articulations facilitate the rotational movements of the radius around its longitudinal axis to constitute a uniaxial diarthrosis, which is known as lateral ginglymus.

e) **The Radiocarpal Joint**
The radiocarpal articulation is also known as the wrist joint, which is a type of condyloid articulation. The distal (lower) end of radius, discus articularis (the articular disc), and the proximal articular surfaces of navicular, lunate and triquetral bones (including their interosseous ligaments) together constitute the wrist articulation. Moreover, the wrist joint is completely encapsulated by the articular capsule.

f) **The Intercarpal Joint**
The carpal joints are based on the articulations between the carpal bones with limited range of movement. These joints consist of the arthrodial diarthroses and are therefore known as the gliding joints. The carpal bone articulations are characterized as follows:
   i) Proximal Row (Carpal) Joint
   ii) Distal Row (Carpal) Joint
   iii) Transverse (Carpal) Joint

g) **The Carpometacarpal joint**
The Carpometacarpal (CMC) joints are based on the interaction between the carpal and metacarpal bones. However, the carpometacarpal articulation of the thumb region differs from the articulations of the other four metacarpal bones with the carpus. Therefore, the carpometacarpal articulations can be categorized as follows:

h) **The Joints of the other Four Metacarpal Bones with the Carpus**
These types of carpometacarpal articulations are formed by the connections between the bases of the second, third, fourth, and fifth medial metacarpal bones and the four bones of the distal carpal row.

i) **The Intermetacarpal Joints**
The four medial metacarpal bones articulate with each other to form the arthrodial diarthroses, which are known as the intermetacarpal joints.

j) **The Metacarpophalangeal Joints**
With the exception of the thumb, the spherical head of each metacarpal bone articulates with the shallow oval cavity on the base of the first phalanx to constitute the metacarpophalangeal joints. The metacarpophalangeal articulations facilitate flexion, extension, adduction, abduction, and circumduction type of joint movements.

k) **The Joints of the Digits**
The interphalangeal joints are categorized as hinge joints that are two in number for each finger and only one for the thumb. The interphalangeal joints can perform movements like flexion and extension.

## 12. Joints of the Lower Extremity

a) **The Hip Joint**

The coxal articulation constitutes the hip joint, which is a type of enarthrodial diarthrosis (ball and socket joint). The articular surfaces of the hip joint consists of the head of the femur and a cup shaped cavity (acetabulum) that connect together to constitute the coxal articulation. The hip joint can perform multi-axial movements like rotation, flexion, extension, abduction, and adduction. The hip joint cavity is completely encapsulated by an articular capsule or the capsular ligament. Other ligaments of the hip joint are described below:

i) iliofemoral ligament (ligamentum iliofemorale/Y-ligament/ligament of Bigelow)
ii) pubocapsular ligament (ligamentum pubocapsulare/pubofemoral ligament)
iii) ischiocapsular ligament (ligamentum ischiocapsulare/ischiocapsular band/ligament of Bertin)
iv) ligamentum teres femoris
v) glenoidal labrum (labrum glenoidale/cotyloid ligament)
vi) transverse acetabular ligament (ligamentum transversum acetabuli/transverse ligament)

b) **The Knee Joint**

The knee articulation/joint is considered as the largest articulation in the human body and related to the ginglymus (hinge) variety of diarthroses. However, its structure is more elaborate and complicated. The articular surfaces of the knee joint pertain to specific portions of the femur, tibia and patella bones. The ligaments associated with the knee joint are as follows:

i) articular capsule (capsula articularis/capsular ligament)
ii) ligamentum patellae (anterior ligament)
iii) oblique popliteal ligament (ligamentum popliteum obliquum/posterior ligament)
iv) tibial collateral ligament (ligamentum collaterale tibiale/internal lateral ligament)
v) fibular collateral ligament (ligamentum collaterale fibulare/external lateral or long external lateral ligament)
vi) anterior cruciate ligament (ligamentum cruciatum anterius/external crucial ligament)
vii) posterior cruciate ligament (ligamentum cruciatum posterius/internal crucial ligament)
viii) medial meniscus (meniscus medialis/internal semilunar fibrocartilage)
ix) lateral meniscus (meniscus lateralis/external semilunar fibrocartilage)
x) transverse ligament (ligamentum transversum genu)
xi) coronary ligaments
xii) synovial membrane encapsulates the upper border of the patella and the lower portion of the front of the femur. The movements associated with the knee joint are flexion, extension, internal, and external rotation.

c) **The Joints between Tibia and Fibula**

The articulations between the tibia and fibula constitute the tibiofibular joints. The fibula articulates with the tibia through its proximal and distal ends. The proximal tibiofibular joint is an arthrodial articulation between head of the fibula and lateral condyle of the tibia. The interosseous membrane acts as an accessory ligament to bind the shafts of tibia and fibula together. However, the tibiofibular syndesmosis constitutes the distal tibiofibular joint, which presents a series of ligaments that are accessory to the ankle joint.

d) **The Talocrural Joint**

The talocrural articulation constitutes the ankle joint, which is a ginglymus variety of diarthrosis. In other words, the ankle joint is a type of hinge joint. The ankle joint facilitates the movements like dorsiflexion and extension.

e) **The Intertarsal Joints**
The intertarsal articulations (joints) are diarthroses that facilitate the gliding movements of the foot. These joints can be categorized in the following manner:
   i) talocalcaneal joint
   ii) talocalcaneonavicular joint
   iii) calcaneocuboid joint
   iv) cuneonavicular joint
   v) cuboideonavicular joint
   vi) intercuneiform and cuneocuboid joint

f) **The Tarsometatarsal Joint**
The tarsometatarsal joints include the articular surfaces of the cuneiform, the cuboid, and the metatarsal bones. The articular facets of the three cuneiform and cuboid bones connect with the bases of the five metatarsal bones to constitute the tarsometatarsal articulations.

g) **The Intermetatarsal Joint**
The articular facets on the bases of the four metatarsal bones connect with each other via dorsal, plantar, and interosseous ligaments to form the intermetatarsal joints. However, no ligament acts to connect the first metatarsal base with the second one.

h) **The Metatarsophalangeal Joint**
The metatarsophalangeal joints are types of modified ball and socket articulations, wherein globular heads of metatarsal bones articulate with the shallow cups upon the bases of the first phalanges via plantar and collateral ligaments. These joints are encapsulated by an articular capsule.

i) **The Joints of the Digits**
The articulations between the digits constitute the interphalangeal joints. The phalanges of the toes connect with each other to form the interphalangeal articulations. The great toe possesses only one interphalangeal joint. However, every other toe (except great toe) comprises of two interphalangeal joints.

## 13. The Muscular System

The muscle cells of the human body facilitate the movements of various body parts through their special function of contraction in response to a requisite external or internal stimulus. These muscle cells can be characterized under three different classes:

a) **Striated Muscle Cells**
The striated muscle cells are those voluntary muscle cells that constitute the skeletal muscular system.

b) **Non-Striated Muscle Cells**
The nonstriated muscle cells are those involuntary muscle cells that occur in the vessel walls and hollow viscera.

c) **Cardiac Muscle Cells**
The cardiac muscle cells consist of those striated cells that constitute the substance of the heart. However, these muscle cells are involuntary in nature.

## 14. The Muscles of the Trunk

The muscles of the back are based on the following group of muscles:

a) **Splenius**

The splenius muscles constitute the superficial layer of the intrinsic back muscles that occupy the back of neck and upper portion of the thoracic region. The splenius muscles overlap the vertical muscles like a bandage and have the following two types:

i) splenius capitis
ii) splenius cervicis

b) **Sacrospinalis (Erector Spinae)**

The erector spinae muscles are positioned in a groove between the angle of the ribs and spinal processes on each side of the vertebral column. The erector spinae is divided into the following three muscle columns:

c) **Iliocostalis**

The lateral column is further divided into the following muscle components:

i) iliocostalis lumborum (iliocostalis/sacrolumbalis muscle)
ii) iliocostalis dorsi (musculus accessorius)
iii) iliocostalis cervicis (cervicalis ascendens)

d) **Longissimus**

i) longissimus dorsi
ii) longissimus cervicis (transversalis cervicis)
iii) longissimus capitis (trachelomastoid muscle)

e) **Spinalis**

i) spinalis dorsi
ii) spinalis cervicis (spinalis coli)
iii) spinalis capitis (biventer cervicis)

f) **Semispinalis**

The semispinalis constitutes the deeper layer of intrinsic back muscles. These muscles originate from half of the vertebral column and are categorized into three distinct parts:

i) semispinalis dorsi
ii) semispinalis cervicis (semispinalis colli)
iii) semispinalis capitis (complexus)

g) **Multifidus (Multifidus Spinae)**

The multifidus consists of short triangular muscular bundles that remain apparent from sacrum to the axis.

h) **Rotatores (Rotatores Spinae)**

It remains confined in the thoracic region.

i) Interspinales and Intertransversarii (Intertransversales) are best developed and most distinct in the cervical region and considered as the smallest of the deep back muscles.

**15. The Muscles of the Pelvis**

The muscles of the pelvis include the following:

a) Obturator Internus
b) Piriformis
c) Levator Ani (Pubococcygeus and Iliococcygeus)
d) Coccygeus (Ischiococcygeus)

**16. The Muscles of the Upper Extremity**

a) **The Muscles that Connect the Upper Extremity to the Vertebral Column**
   i) trapezius
   ii) rhomboideus major
   iii) latissimus dorsi
   iv) rhomboideus minor
   v) levator scapulae

b) **The Muscles Connecting the Upper Extremity to the Anterior and Lateral Thoracic Walls**
   i) pectoralis major
   ii) subclavius
   iii) pectoralis minor
   iv) serratus anterior

c) **The Muscles of the Shoulder**
   i) Deltoid muscle originates from the lateral third portion of clavicle, the acromion, and the spine of scapula. However, it gets inserted into the deltoid tuberosity of humerus. This muscle facilitates the abduction and medial and lateral rotation of the arm.
   ii) Subscapularis muscle originates from the subscapular fossa that forms the ventral surface of scapula. However, it gets inserted into the lesser tubercle of humerus. The subscapularis helps to medially rotate and adduct the arm and fixes the humeral head in the glenoid cavity (of the scapula).
   iii) Supraspinatus muscle originates from the supraspinatus fossa of scapula and gets inserted into the superior facet of greater tubercle of humerus. This muscle assists the deltoid in the abduction of the arm.
   iv) Infraspinatus muscle arises from the infraspinatus fossa of scapula and gets inserted into the middle facet of the greater tubercle of humerus. This muscle helps in the lateral rotation of the arm and fixes the head of humerus into the glenoid cavity of scapula.
   v) Teres Minor muscle originates from the middle portion of lateral border of scapula and gets inserted into the inferior facet of greater tubercle of humerus. Like infraspinatus, teres minor muscle also helps in the lateral rotation of the arm and fixes the head of humerus into the glenoid cavity of scapula.
   vi) Teres Major muscle arises from the posterior surface of the inferior angle of scapula and gets inserted into the medial lip of the intertubercular groove of humerus. This muscle facilitates the adduction and medial rotation of the arm.

d) **The Muscles of the Arm**
   i) coracobrachialis
   ii) biceps brachii
   iii) brachialis
   iv) triceps brachii

e) **The Muscles of the Anterior Compartment of the Forearm Superficial (First) Layer**
   i) pronator teres
   ii) flexor carpi radialis
   iii) the palmaris longus
   iv) flexor carpi ulnaris
f) **The Muscle of the Anterior Compartment of the Forearm Intermediate (Second) Layer**
   i) flexor digitorum superficialis
g) **The Muscles of the Anterior Compartment of the Forearm Deep (Third) Layer**
   i) flexor digitorum profundus
   ii) flexor pollicis longus
   iii) pronator quadrates
h) **The Muscles of the Posterior Compartment of Forearm of the Superficial Layer**
   i) brachioradialis
   ii) extensor carpi radialis longus
   iii) extensor carpi radialis brevis
   iv) extensor digitorum
   v) extensor digiti minimi
   vi) extensor carpi ulnaris
i) **The Muscles of the Posterior Compartment of the Forearm Deep Layer**
   i) supinator
   ii) abductor pollicis longus
   iii) extensor pollicis longus
   iv) extensor pollicis brevis
   v) extensor indicis
j) **The Muscles of the Hand: Thenar Muscles**
   i) opponens pollicis
   ii) abductor pollicis brevis
   iii) flexor pollicis brevis
   iv) adductor pollicis

   Hypothenar Muscles
   i) abductor digiti minimi
   ii) flexor digiti minimi Brevis
   iii) opponens digiti minimi
k) **The Short Muscles**
   i) Lumbricals
   ii) Dorsal Interossei
   iii) Palmar Interossei

**17. The Muscles of the Thigh**

a) **Anterior Thigh Muscles**

The below mentioned anterior thigh muscles are based on the anterior compartment of thigh:

i) pectineus
ii) iliopsoas
iii) psoas major
iv) iliacus
v) femoris
vi) vastus lateralis
vii) vastus intermedius
viii) vastus medialis

b) **Medial Thigh Muscles**

i) adductor longus
ii) adductor brevis
iii) adductor magnus
iv) gracilis
v) obturator externus

c) **Gluteal Region Muscles**

i) gluteus maximus
ii) gluteus medius
iii) gluteus minimus
iv) tensor fasciae latae
v) piriformis
vi) obturator internus
vii) superior and inferior gemelli
viii) quadratus femoris

d) **Posterior Thigh Muscles**

i) semitendinosus
ii) semimembranosus
iii) biceps femoris (long head)

e) **The Muscles of the Anterior Compartment of the Leg**

i) tibialis anterior
ii) extensor hallucis longus
iii) extensor digitorum longus
iv) fibularis tertius

f) **The Muscles of the Lateral Compartment of the Leg**

i) fibularis longus
ii) fibularis brevis

g) **The Superficial Muscles of the Posterior Compartment of the Leg**
   i) gastrocnemius
   ii) soleus
   iii) plantaris
h) **The Deep Muscles of the Leg**
   i) Popliteus
   ii) Flexor Hallucis Longus
   iii) Flexor Digitorum Longus
   iv) Tibialis Posterior
i) **First Layer Muscles of the Foot**
   i) abductor hallucis
   ii) flexor digitorum brevis
   iii) abductor digiti minimi
j) **Second Layer Muscles of the Foot**
   i) quadratus plantae
   ii) lumbricals
k) **Third Layer Muscles of the Foot**
   i) flexor hallucis brevis
   ii) adductor hallucis
   iii) flexor digiti minimi brevis
l) **Fourth Layer Muscles of the Foot**
   i) plantar interossei (three muscles)
   ii) dorsal interossei (four muscles)
m) **Muscles of the Dorsum of Foot**
   i) extensor digitorum brevis
   ii) extensor hallucis brevis

# Common Pathologies

**Rotator Cuff Tendinitis**

Rotator cuff tendinitis, often with inflammation of the subacromial bursa overlying it, is the most common cause of shoulder pain other than trauma. In rotator cuff tendinitis, also known as impingement syndrome, the rotator cuff degenerates from rubbing against the acromion and/or the acromioclavicular joint. This results in irritation of the tendons and inflammation of the normally smooth bursa that line the tendons. Symptoms include pain, swelling, and tenderness at the front of the shoulder.

**Frozen Shoulder**

Frozen shoulder, also called adhesive capsulitis, causes pain and stiffness in the shoulder. It is characterized by progressive pain and global loss of motion in the shoulder. Movement of the shoulder is severely restricted. Pain is usually constant, worse at night. Inflammation of the capsule restricts movement of the bones in the shoulder joint. The pathophysiology of frozen shoulder is still unclear. As the condition progresses, the stiffness may continue to the point where range of motion can be severely limited.

**De Quervain's Tenosynovitis**

De Quervain's tenosynovitis is a painful condition affecting the tendons on the thumb side of wrist. Tendons include the extensor pollicis brevis and the abductor pollicis longus tendons. When the tendons swell, they rub against the walls of the narrow canal they pass through. Pain at the base of the thumb and in the lower arm results from the ongoing irritation. Pain is reproduced by stretching the tendons with the thumb inside a closed fist.

**Carpal Tunnel Syndrome**

Carpal tunnel syndrome is caused by compression of the median nerve at the wrist. Carpal tunnel is a narrow passageway of ligament and bones at the base of your hand. It contains nerve and tendons. Carpal tunnel syndrome results in a feeling of intermittent numbness of the thumb, index, and long fingers and the radial side of the ring finger. Symptoms are often worse at night or after use of vibrating tools or great force.

**Dupuytren's Contracture**

Dupuytren's contracture refers to a thickening of the underlying fibrous tissue beneath the skin of the palm of the hand and of the fingers. It involves the palmar fascia of the hand. The finger affected by contracture cannot be straightened completely, which can complicate everyday activities. The ring finger is affected most often.

**Osteoarthrosis**

Osteoarthrosis is a noninflammatory degenerative join disease. The cause of osteoarthritis (Figure 13.a) is unknown. Symptoms may include degeneration of the articular cartilage, hypertrophy of bone at the margins, changes in the synovial membrane, tenderness, stiffness, locking and sometimes an effusion. It can occur in multiple joints, but the symptoms will likely only be noticeable in just one or two joints. Primary symptoms of osteoarthritis include joint pain, stiffness upon arising, and locking of the joint with continued immobility.

**Rheumatoid Arthritis**

Rheumatoid arthritis (Figure 13.a) is a chronic autoimmune disease that progresses over time (Figure 13.b), resulting in disability. It is characterized by pain, swelling, and inflammation in the joints and surrounding tissues. It can also affect other organs in the body. The cause of rheumatoid arthritis is not known. It can affect any joint but is common in the wrist and fingers. It can be a disabling and painful condition, which can lead to substantial loss of functioning and mobility.

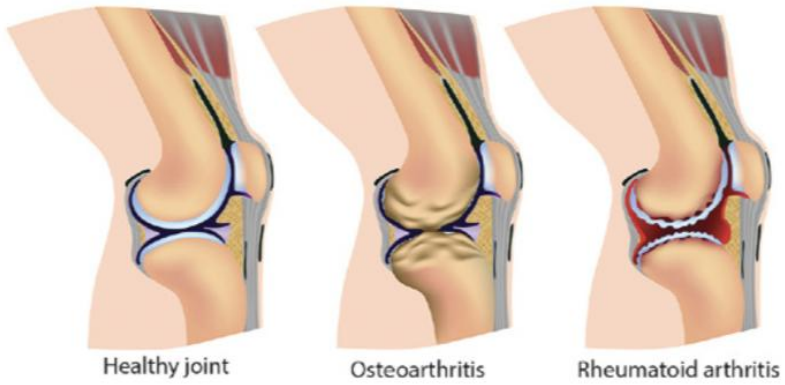

**Figure 13.a Common Types of Arthritis**

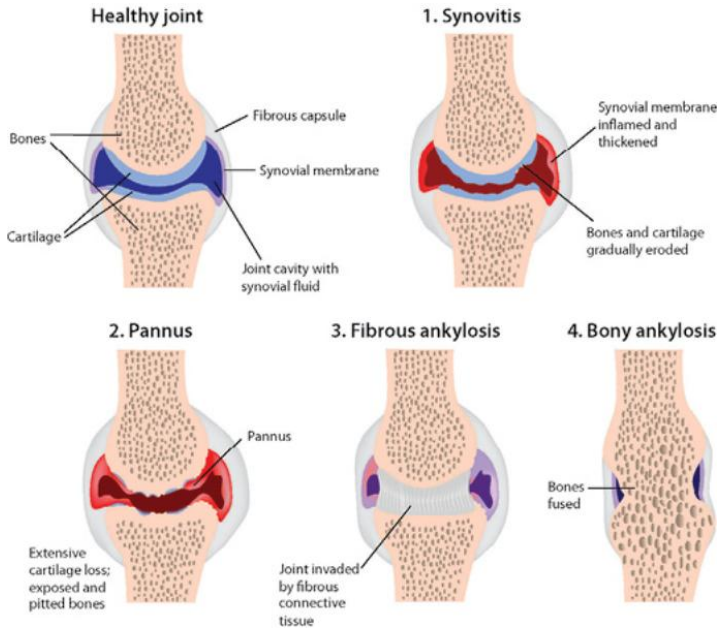

**Figure 13.b Stages of Rheumatoid Arthritis**

**Osteoporosis**

Osteoporosis (Figure 13.c) is a systemic bone disease characterized as the diminishment of bone mass and damage of bone micro-structure. It is a silent disease. It causes bones to become weak and brittle. Its risk factors include aging, being female, low body weight, low sex hormones or menopause, smoking, and some medications. Hip, wrist, and spine fractures commonly result from osteoporosis.

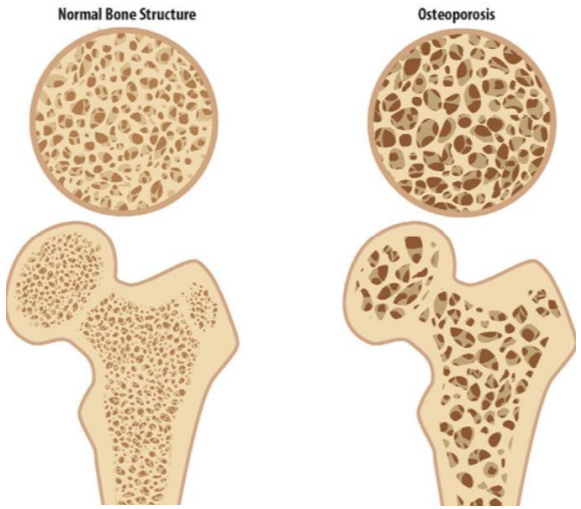

**Figure 13.c Osteoporosis**

**Septic Arthritis**

Septic arthritis is the purulent invasion of a joint by an infectious agent which produces arthritis. Septic arthritis develops when bacteria or other tiny disease-causing microorganisms spread through the bloodstream to a joint. This inflammatory process, which is considered sterile because the skin remains unbroken, usually results from a bacterial infection in a location elsewhere in the body.

**Meralgia Paresthetica**

Meralgia paresthetica is a condition characterized by tingling, numbness and burning pain in the outer part of your thigh. Pain in the outer thigh is caused by injury to lateral cutaneous nerve of thigh. The nerve passes through the inguinal ligament, at its lateral end, at the level of the anterosuperior iliac spine, and becomes entrapped. It typically occurs in isolation

## Diseases of the musculoskeletal system and connective tissue (M00-M99)

**NOTES** Use an external cause code following the code for the musculoskeletal condition, if applicable, to identify the cause of the musculoskeletal condition

Excludes *arthropathic psoriasis (L40.5-)*

*certain conditions originating in the perinatal period (P04-P96)*

*certain infectious and parasitic diseases (A00-B99)*

*compartment syndrome (traumatic) (T79.A-)*

*complications of pregnancy, childbirth and the puerperium (O00-O9A)*

*congenital malformations, deformations, and chromosomal abnormalities (Q00-Q99)*

*endocrine, nutritional and metabolic diseases (E00-E88)*

*injury, poisoning and certain other consequences of external causes (S00-T88)*

*neoplasms (C00-D49)*

*symptoms, signs and abnormal clinical and laboratory findings, not elsewhere classified (R00-R94)*

**This chapter contains the following blocks:**

**M00-M02** Infectious arthropathies
**M04** Autoinflammatory syndromes
**M05-M14** Inflammatory polyarthropathies
**M15-M19** Osteoarthritis
**M20-M25** Other joint disorders

**M86-M90** Other osteopathies
**M91-M94** Chondropathies
**M95** Other disorders of the musculoskeletal system and connective tissue
**M96** Intraoperative and postprocedural complications and disorders of musculoskeletal system, not elsewhere classified
**M97** Periprosthetic fracture around internal prosthetic joint
**M99** Biomechanical lesions, not elsewhere classified

## Arthropathies (M00-M25)

INCLUDES *Disorders affecting predominantly peripheral (limb) joints*

## Infectious arthropathies (M00-M02)

NOTES This block comprises arthropathies due to microbiological agents. Distinction is made between the following types of etiological relationship:

a) direct infection of joint, where organisms invade synovial tissue and microbial antigen is present in the joint;

b) indirect infection, which may be of two types: a reactive arthropathy, where microbial infection of the body is established but neither organisms nor antigens can be identified in the joint, and a postinfective arthropathy, where microbial antigen is present but recovery of an organism is inconstant and evidence of local multiplication is lacking.

4th M00 Pyogenic arthritis
